EDU431 solved final term papers 2018

2 marks

Q: what are subjective type questions? Tell names

ANS: Subjective test items (essay questions) are constructed response type questions that can be the best way to measure the students' higher order thinking skills, such as applying, organizing, synthesizing, integrating, evaluating, or projecting while at the same time providing a measure of writing skills. Essay items can vary from very lengthy (5-10 pages), open-ended to limited or restricted response (one page or less). Therefore, essay type questions are divided into two types

I. Restricted Response Items
II. Extended Response Items

Q: High stake testing matters

ANS: High-stakes testing as the use of a summative test or an assessment (i.e., a test designed to measure student achievement after a period of instruction has been completed) to make decisions that are of prominent educational, financial, or social impact.

Types of High stake test

Criterian Referenced Test

Norm-Referenced High-Stake Tests

Q: How to design rubric?

ANS: 1. Identify a learning goal.

2. Choose outcomes that may be measured.

3. Develop or adapt an existing rubric.

4. Share it with students

Q: Elements of Rubric

ANS: A rubric includes:

1. Score

2. Criteria

3. Levels of performance

4. Descriptors

Anabiya Khan

Q: Restricted response items names

ANS: Restricted response item: Pose a specific problem for which student needs to recall suitable information, organize it, derive a defensible conclusion, and express it within the given limits the questions (like 400 word, 30 min. etc.)

Some of which are;

1. Analysis of relationship.

2. Compare and contrast positions.

3. Explain cause-effect relationship.

4. Organize data and support a viewpoint.

5. Formulate hypotheses.

6. Point out strengths and weaknesses.

7. Integrate data from various resources

3 marks

Q: Advantage if essay type questions

Ans: Extended response questions have following advantages over other types of question formats: 1. Effective for assessing higher order abilities: analyses synthesize and evaluate. 2. It is comparatively less time consuming to develop such items. 3. Emphasizes essential communicational skills. 4. Guessing is eliminated

Q: State any three limitations of mcqs

Ans: Limitations of MCQs. 1. Take a long time to construct in order to avoid arbitrary and ambiguous questions. 2. Also require careful preparation to avoid preponderance of questions testimony recall. 3. Provide cues that do not exist in practice.

Q: analytic rubric? In which conditions it is used?

ANS: Analytic rubric

Each criterion is assessed separately by using different descriptive ratings. Each criterion is given a separate score. Final score is made up of adding each component parts. It takes more time to score but gives detailed more feedback.

When to use:

1. Several faculty are collectively assessing student work.

2. Outside audience will be examining rubric scores.

3. Profiles of specific strength/weakness are desired.

Q: Benefits of rubric in evaluation process

ANS: A rubric is an explicit set of criteria used for assessing a particular type of work or performance and provides more details than a single grade or mark. It is a set of scoring guidelines for evaluating student work.

Q: Item analysis

ANS: The item analysis is an important phase in the development of a test. In this phase statistical methods are used to identify any test items that are not working well. If an item is too easy, too difficult, failing to show a difference between skilled and unskilled examinees, or even scored incorrectly, an item analysis will reveal it.

5 marks:

Q: How self assessment should be implemented

ANS: Boud (1995) argues that the way in which self-assessment is implemented is critical to its acceptance by students. According to Boud (1995), the implementation process needs to include:

A clear rationale: what are the purposes of this particular activity?

Explicit procedures—students need to know what is expected of them.

Reassurance of a safe environment in which they can be honest about their own performance without the fear that they will expose information which can be used against them.

Confidence that other students will do likewise, and that cheating or collusion will be detected and discouraged (Boud, 1995, p.182).

Q: Extended response type questions with example

ANS: It allows the students to determine the length and complexity of the response. This type of questions is most suitable for measuring higher level mental processes skills like synthesis and evaluation. Teachers prefer these questions when they want to have information about student's ability to organize, integrate, express and evaluate information.

Example: What are the teachings of Islam about the respect of elders? How do these teachings help us to make a good society? Marks will be given for correct information, your own point of view, good judgment and good presentation.

Q: Restricted response type questions with example

Anabiya Khan

ANS: Pose a specific problem for which student needs to recall suitable information, organize it, derive a defensible conclusion, and express it within the given limits of the questions (like 400 word, 30 min. etc.).

Example: List the similarities and differences in the process of cell division in meiosis and mitosis? A variety of learning outcomes (Linn, 2000) can be checked by using this format of essay question. Some of which are;

1. Analysis of relationship.

2. Compare and contrast positions.

3. Explain cause-effect relationship.

4. Organize data and support a viewpoint.

5. Formulate hypotheses.

6. Point out strengths and weaknesses.

7. Integrate data from various resources.

Q: What is report? Name of reports?

ANS: Reporting is the process of communicating the knowledge and understanding gained from assessing a student's work to improve learning

There are two forms of reports 1. Formal reports 2. Informal reports

Q: Explain formal and informal report

ANS: Formal reports

Formal reports communicate about important aspects of the students' progress in the areas of academic, social, human and career development to parents and students.

Informal reports

Informal report tells parents about what their child is able to do. It provides information about the areas of learning that need further attention or development and the ways the teacher is supporting the student's learning needs.

Q: assembling or packaging the test

ANS: Assembling Test Once you have measureable instructional objectives, test blueprint, written test items matching instructional objectives, so you are ready to

• package the test and • reproduce the test

Anabiya Khan

Assembling Test (Packaging the Test)

1. Grouping together items of similar format

2. Arranging test items from easy to hard

3. Properly spacing items

4. Keeping items and options on the same page

5. Placing illustrations near the descriptions

6. Checking the answer key

Q: What is derived score? Tell name of any two types of derived score.

ANS: A derived score is a numerical report of test performance on a score scale that has well-defined characteristics and yields normative meaning. Most common type of derived scores are
1. Grade norms

2. Percentile norms

3. Standard norms

Q: What are subjective type questions? Also tell types.

ANS: Subjective test items (essay questions) are constructed response type questions that can be the best way to measure the students' higher order thinking skills, such as applying, organizing, synthesizing, integrating, evaluating, or projecting while at the same time providing a measure of writing skills. Essay items can vary from very lengthy (5-10 pages), open-ended to limited or restricted response (one page or less). Therefore, essay type questions are divided into two types
I. Restricted Response Items

II. Extended Response Items

Q: Develop 2 restricted response questions.

ANS: Q: List the similarities and differences in the process of cell division in meiosis and mitosis?

Q: Develop 2 extended response questions.

ANS: Q1. Give examples to identify different forms of governments, their advantages and disadvantages over each other. Which form of government is most suitable in the socioeconomic and cultural context of our country? Your response will be graded on accuracy of information, power of arguments, conciseness and orderliness of presentation. It is suggested to keep your response limited to 5000-6000 words.

Anabiya Khan

Q2. What are the teachings of Islam about the respect of elders? How do these teachings help us to make a good society?

Q: How to design a rubric.

ANS: Basic Steps to Design Rubric

1. Identify a learning goal.

2. Choose outcomes that may be measured.

3. Develop or adapt an existing rubric.

4. Share it with students.

Q: How to conduct parent teacher meeting.

ANS: 1. Make plans for the meeting.

2. Begin the meeting in a positive manner.

3. Present the student's strong points before describing the areas needing improvement.

4. Encourage parents to participate and share information.

5. Plan a course of action cooperatively.

6. End the meeting with a positive comment.

7. Use good human relation skills during the meeting

Q: Fixed choice assessment and complex performance assessment.

ANS: By format of assessment

i. Fixed Choice Assessment
ii. Complex Performance Assessment

Fixed Choice Assessment

Fixed Choice Assessment is sued to measure the skills of people efficiently (means measure more skills in less time) and for this we usually use fixed choice items i.e. Multiple choice question, matching exercise, fill in the blanks and true false. It is called fixed choice because the person who is attempting the paper does not need to write the answer, just need to choice the answer.

Anabiya Khan

Complex Performance Assessment

Complex Performance assessment is used for measurement of performance in contexts and the problems valued in their own right. This includes hands on laboratory experiments, projects, essays, oral presentations.

Q: State 5 rules for constructing alternative form questions.

ANS: 1. Avoid broad general statements if they are to be judged true or false.

2. Avoid trivial statements

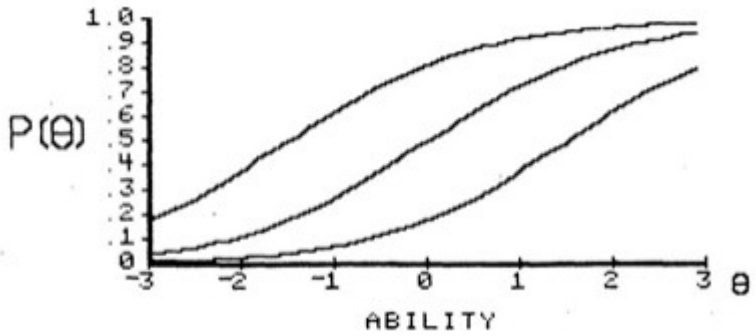

3. Avoid the use of negative especially double negative statements.

4. Avoid to include two ideas in one statement unless cause and effect relationship are being measured

5. Avoid long complex sentences

Q: What is Item difficulty in IRT? Explain with graph.

ANS: The application of Item difficulty in IRT is defined as the ability at which the probability of success on the item is .5 on a logit scale, which is also known as threshold difficulty (see Fig. 3). An item's level of difficulty is another factor affecting an individual's probability of responding in a particular way. An item that has a high level of difficulty will be less likely to be answered correctly by an examinee with low ability than an item that has a low level of difficulty (i.e., an easy item).
