Assignment 4

Research Methodology/ Instrumentation

By M.Kashif(03064963933)

Total Marks: 15

Dear Students

You are required to send assignments on your approved/ revised topics for research. This assignment must include previous assignments as well. Your assignment must clearly state your research topic, statement of problem, objectives of the research and hypotheses/ research questions.

It is compulsory that you all must write your Approved Thesis TITLE on your assignment files, only then the supervisor can finalize and guide about your methodology.

This assignment particularly requires writing the research methodology of your thesis.

Methodology explains how you design your research. What specific methods will you acquire for data collection and how the data will be collected and from whom? Some major headings that must be a part of your thesis are:

- Methodology
- Design
- Research Method
- Population
- Sampling Technique
- Sample size
- Instrumentation—instruments/ tools used for the data collection
- Validity and reliability of the tools/ questionnaires
- Time frame

You are required to complete this assignment by giving details of all of these sub-headings.

by M.Kashif(03064963933

NOTE: Please attach your proposed questionnaires/instruments for approval. Without approval of instruments you cannot collect data.

The paper I write based on the given document will include a comprehensive research methodology for the topic "Effect of Social Media on Students' Academic Performance at Elementary Level in Rawalpindi. " The organization of this paper will be very similar to the original assignment, though slightly more detailed.

Chapter 4: Research Methodology

3. 1 Methodology

This chapter addresses the part of the research study, which potentially influences the result, such as the used methods, research design, instruments, populations, sampling procedures, and sample size. Therefore the methodology is used to carry out the research study on the topic: "Effect of Social Media on Students' Academic Performance at Elementary Level in Rawalpindi. " Here the researcher outline the phase the study has gone through.

3. 2 Research Design

In this study, the descriptive research design is adopted. A quantitative method of research is engaged in this study to investigate the phenomenon under consideration. The research is carried out for the elementary level of public sector schools. In this respect the survey technique is chosen to procure the intended information through a questionnaire. The rationale of adopting this survey method, convenient sampling, and numeral statistical survey method is to have a huge turnout of the target participants within a limited period.

3. 3 Research Method

Data is gathered employing a simple random sampling technique, which constitutes the method of quantitative research. Information is gathered from students in order to discover the impact of social media on student's performance in the elementary school.

by M.Kashif 03064963933

3. 4 Population

The targeted participants can be named as elementary-level students of the public sector schools in Rawalpindi. Considering the time constraint of the study, the population is defined as the process of identifying three governmental schools at the elementary level in Rawalpindi.

3. 5 Sampling Technique

Huge population sample is the characteristic of the section Selection Criteria The study utilized a cross-sectional research method with a large sample size in order to get large representative population. The researcher employs a convenient sampling technique to the study as this is the most efficient way of doing the study due to time and resources constraints.

3. 6 Sample Size

A total of 210 respondents are conveniently chosen to complete the closed-ended questionnaire that has been designed. Here, both males and females are pulled into the study although attempts are made to balance them. Public is dominant in population because this segment has more registered students as compared to other schools.

3. 7 Instrumentation—List of instruments/tools to be used in data collection

The identification of the instrument depends with the type of problem being solved. Therefore, through a comprehensive literature review, a self-developed questionnaire is formulated to examine the impact of social media on students' performance at the elementary level in Rawalpindi. The technique utilized as the means of collecting data in this work involves the administration of close ended questionnaire. The questionnaire consists of two parts: demographic part and statements part.

The demographic includes some questions like; the name of the respondents (optional), gender, age, grade, subject, previous exam performance in terms of marks. The second part comprises 20 questions with five numeric choices: The respondents also rated the statement 'I have received useful training to perform the tasks required of me at work' on a Likert Scale ranging from 5 (Strongly Agree), 4 (Agree), 3 (Neutral), 2 (Disagree), and 1 (Strongly Disagree). The average of ratings for each factor classified is computed; the higher the average of the rating then the factor which has the largest influence on the relative students' performance due to social media usage is considered.

3. 7a Validity and Reliability of the Tools/Questionnaires

Instruments are validated by the opinion of other experts. Regarding the reliability of the research, process is used for making it consistent. These are close-ended questions and all the respondents are administered the same set of question in the same order. This also implies that when checking for reliability, the current or the checklist can be easily reproduced.

by M.Kashif03064963933

3. 9 Time Frame

It is planned to conduct a survey which will take six days in total. Data will be collected using Google Forms that will be developed for the various quizzes. The questionnaire/survey will be developed via links, which will be shared with respondents through Social networks such as WhatsApp group, Facebook and other persons through Short Message Service (SMS).

3. 10 Questionnaire

Dear Friends,

I am a student of Bachelor of Education. Greetings Jithin, I am doing my Master of Education via Middle (Grade 6 & 7) and Elementary (Grade 2) at the Virtual University of Pakistan concerning the research topic: Effect of Social Media on Students' Academic Performance: A Study at Elementary Level in Rawalpindi. Your response will remain confidential and will be utilized strictly for research purposes.

! Here is the demographic table in a blank format, ready for results to be added later:

Demographic Table

Variable	Categories	Frequency (n)	Percentage (%)
Gender	Male		
	Female		
Age	8-10 years		
	11-13 years		
	14-16 years		
Grade	3rd Grade		
	4th Grade		
	5th Grade		
Subject	Science		
	Mathematics		
	English		
	Social Studies		
Marks in Previous Exams	Below 50%		
	50% - 60%		
	61% - 70%		
	71% - 80%		
	Above 80%

Likert Scale Table

Question No.	Statement	Strongly Disagree (1)	Disagree (2)	Neutral (3)	Agree (4)	Strongly Agree (5)
1	I use social media for more than 2 hours daily.					
2	Social media helps me in completing my homework.					
3	I feel distracted from my studies due to social media.					
4	I use social media to join study groups and collaborate with classmates.					
5	My academic performance has improved because of the educational content I find on social media.					
6	I often stay up late at night using social media, which affects my school performance.					
7	Social media platforms provide useful information for my school projects.					
8	I feel stressed due to negative interactions on social media.					
9	Social media helps me stay updated with school events and announcements.					
10	I find it difficult to concentrate on my studies after using social media.					
11	I use social media to ask for help with school subjects from my friends or teachers.					
12	My grades have dropped since I started using social media					

by M.Kashif(03064963933

	frequently.					
13	Social media is a good tool for educational purposes.					
14	I often compare my academic achievements with others on social media.					
15	Using social media makes me more motivated to study.					
16	I get distracted by notifications from social media while studying.					
17	Social media helps me in learning new things that are not taught in school.					
18	I use social media to participate in online educational competitions or quizzes.					
19	My teachers encourage the use of social media for learning purposes.					
20	I feel that social media has a positive impact on my overall academic performance.
