بِسۡمِ ٱللَّهِ ٱلرَّحۡمَٰنِ ٱلرَّحِيمِ

In the name of God, Most Gracious, Most Merciful

ENG 510

OBJECTIVE

- **Sociolinguistics** is the study of the connection between language and society and the way people use language in different social situations.
- **Diachronic** variation deals with language change over time.
- he term dialect was borrowed in the Renaissance, as a learned word from **Greek**.
- **gravity model** was originally used to describe the diffusion of non-linguistic innovations.
- The study of language contact is called **contact linguistics.**
- The question that arises is whether **variation** is free or **structured**.
- observed in language was "**free**" and"**unconstrained**".
- The most common products are **pidgins**, **creoles**, **codeswitching**, and mixed languages.
- Wave model originally presented by **Johannes Schmidt**.
- **20** th century, the **wave model** has had little acceptance as a model for language.
- Model of the diffusion of innovations was introduced by **Peter Trudgill** to **sociolinguistics**.
- **gravity model** was originally used to describe the diffusion of non-linguistic innovations.
- The **gravity model** was originally used to describe the diffusion of non-linguistic innovations.
- The **British sociolinguist Robert Le Page** is famous for his studies of variation in creole speaking communities in the Caribbean and Britain.
- **Le Page** was intrigued by the number of different styles or registers that were often in play in these communities.
- studying variation, whether it is from a **quantitative** or **qualitative** perspective,
- **variation** is quite predictable and depends entirely on the immediate linguistic context in which the /**p**/ occurs.
- **Synchronic linguistics** is the study of a language at a given point in time.
- A **synchronic study** of language is a comparison of languages or dialects that are used within some defined spatial region and during the same period of time.
- The term diachronic consists of '**dia'** that means '**throughout**'; and '**chron'** that means '**time'**. Diachronic linguistics is the study of language through different periods in history.
- **Diachronic linguistics** is one of the two main temporal dimensions of language study identified by a Swiss linguist **Ferdinand de Saussure**.
- **synchronic perspective** about varieties of English and **worldwide** spread of English,
- **International Phonetic Alphabet (**IPA).
- Baluchistan has **multiple** languages.
- Language and social interaction have a **reciprocal** relationship.
- **Nature of participants**, their relationship (socio-economic, sexual, occupational, etc.)
- **Number of participants** (face-to-face or one addressing a large audience, etc.)
- English from the Old English period to the **twentieth century** is a diachronic study.
- **Latin** as dialects of Latin (or the Romance dialects).
- **Dialectology** (from Greek διάλεκτος, dialektos, "talk, dialect"; and -λογία, -logia) is the scientific study of linguistic dialect, a sub-field of sociolinguistics.
- The name `**Proto-Indo-European** to the node at the top of the tree,

- **family tree model**, which was developed in the **19 th cetury** as an aid in the historical study of languages.
- **Selection:** When a particular variety is selected as the one to be developed into a standard language.
- **proper language** is a standard language. Standard languages are interesting in as they have a rather special relation to society.
- **ironical** that academic linguistics is likely to arise only in a society with a standard language, such as Britain, the United States or France.
- **Standard languages** are the result of a direct and deliberate intervention by society.
- The term '**dialect**' is a very powerful and common way of characterization.
- `language AND dialect is an influence of **Greek** culture.
- **George Bernard Shaw's Pygmalion** is a very easy way to explain the idea.
- **Haugen (1966**) states that this was the case in England until the term dialect was borrowed in the Renaissance, as a learned word from **Greek**.
- **Croft (2000)** assumes that language change is at least partly random.
- the study of linguistic change is the so-called "**Uniformitarian Axiom"**.
- **Labov (1994**) characterizes language change as "**irrational, violent, and unpredictable**".
- study the history of words, i.e. **Etymology**
- **Phonetic**: Old English had the sound u-umlaut, while that sound is no longer present in modern English(ME)
- **First Premise**: Linguistics is a descriptive rather than a prescriptive discipline.
- **Second Premise**: Every naturally used language variety is systematic with regular rules and restrictions at the lexical, phonological and grammatical level.
- **Thrid Premise**: Primary attention to speech rather than writing
- **New Guinea** comprising between **700** and **800** languages, Austronesian and non-Austronesian (or Papuan).
- English. Urdu is the **official** language.
- national language **Urdu** has a number of handicaps.
- Language and social interaction have **a reciprocal** relationship.
- Africa we shall delve into the situations of a sample African country of **Cameroon**.
- New Guinea there is no **one-to-one mapping** between village names, groups, and language names.
- The greatest concentration of diversity is found in **Melanesia.**
- Dialect differences are not only **geographical**.
- Hip Hop Speech Style (**HHSS**),
- African American Vernacular English **(AAVE).**

SUBJECTIVE

What Is Sociolinguistics?

The term sociolinguistics can be defined as the study of language in relation to society. It is the descriptive study of the effect of any and all aspects of society including cultural norms, expectations and context, on the way language is used, and society's effect on language. It differs from sociology of language which focuses on the effect of language on society. Historically, it is closely related to linguistic anthropology, and the distinction between the two fields has been questioned. It also studies how language varieties differ between groups separated by certain social variables e.g., ethnicity, religion, status, gender, level of education, age, etc. Furthermore, it focuses on various aspects such as how creation and adherence to these rules is used to categorize individuals in social or socioeconomic classes. William Labov as the founder of the study of sociolinguistics

What Is Free Variation?

Since the 1960s sociolinguists have amassed considerable evidence showing that speaker variability can be constrained by non-linguistic factors (things external to the linguistic system) as well as by linguistic factors. The effects of social factors are seldom categorical; that is, all speakers generally alternate at some time.

No social or contextual constraint determines where you will hear one form rather than another 100 per cent of the time. However, they will tell you how likely you are to hear different forms in different

contexts and with different speakers. The difference is probabilistic. Sociolinguists argue that even though sociolinguistic analyses don't enable us to predict with 100 per cent certainty which variant will surface, where, and when, sociolinguistic studies reveal an additional layer of systematic structure that justifies the limited indeterminacy that remains.

Synchronic Variation ?

Synchronic linguistics is the study of a language at a given point in time. A synchronic approach (from Greek συν- "together" and χρόνος "time") considers a language at a moment in time without taking its history into account. Synchronic linguistics is contrasted with diachronic linguistics (or historical linguistics), the study of a language over a period of time. One can approach all different aspects of language, such as grammar, syntax, semantics, phonology etc., from two different points of view.

Synchronic variation in sociolinguistics focuses on the following.

- Explores the functioning of language at a single time point
- Without reference to earlier or later stages
- Explores varieties of dialects and their various features

1. **Selection**:

When a particular variety is selected as the one to be developed into a standard language, it may be an existing variety. Such as the one used in an important political/commercial centre and it could be an amalgam of various varieties. The choice is a matter of great social and political importance. The chosen variety necessarily gains prestige and so do the speakers. However, in some cases the chosen variety has been one with no native speakers at all. For instance, Classical Hebrew in Israel and the two modern standards for Norwegian (Haugen, 1994).

1. **Codification**:

Some agency such as an academy does the process of codification. The production of written dictionaries and grammar books plays an important role to 'fix' the variety , it makes everyone to agrees on what is correct. Once codification is done , it becomes necessary for many ambitious citizens to learn the correct forms and not to use in writing any 'incorrect' forms that may exist in their native variety.

2. Elaboration of Function:

It must be possible to use the selected variety in all the functions associated with central governmental institutes. For example, in parliament and law courts, in bureaucratic, educational and scientific documents of all kinds and, of course, in various forms of literature. This may require extra linguistic items to be added to the variety, especially technical words. It is also necessary to develop new conventions for using existing forms, how to formulate examination Qs, how to write formal letters etc.

3. **Acceptance**:

The variety has to be accepted by the relevant population as the variety of the community – usually in fact as the national language.

Once this has happened, the standard language serves as:

- A strong unifying force for the state
- A symbol of independence
- A marker of its difference from other states

What Is Free Variation?

Since the 1960s sociolinguists have amassed considerable evidence showing that speaker variability can be constrained by non-linguistic factors (things external to the linguistic system) as well as by linguistic factors. The effects of social factors are seldom categorical; that is, all speakers generally alternate at some time.

What Is Linguistic Repertoire?

An individual also has a speech repertoire; that is, he or she controls a number of varieties of a language or of two or more languages. Quite often, many individuals will have virtually identical repertoires. So, 'a speech repertoire is the range of linguistic varieties which the speaker has at his disposal and which he may appropriately use as a member of his speech community.'The concept of repertoire is more useful when applied to individuals rather than to groups. We can use it to describe the communicative competence of individual speakers because each person has a distinctive speech repertoire.

Sociology of Language:

Sociology of language is the study of the relations between language and society. The difference between the two is quite clear. Sociolinguistics focuses on the effect of society on language. Sociology of language focuses on the effect of language on society. As far as the sociology of language is concerned, it would seek to understand the way that social dynamics are affected by individuals. According to SuChiao Chen, language is considered to be a social value within this field, which researches social groups for phenomena like multilingualism and lingual conflict. It deals with who is 'authorized' to use what language, with whom and under what conditions. It also deals with how an individual or group identity is established by the language that is available for people to use.

There are certain significant aspects of linguistic hegemony, for example:

- Some hegemonic languages such as English has spread worldwide.
- More interconnected world
- Increasing population
- Increasing population mobility
- Changing world scenario and heterogeneity of language practices
- Speed of change in life and consequently in language practices

Q. Define isogloss .

An isogloss, also called a heterogloss, is the geographic boundary of a certain linguistic feature, such as the pronunciation of a vowel, the meaning of a word, or the use of some morphological or syntactic feature,

Q. Language desertion

Language desertion is the act of deserting, or willful abandonment. Language desertion or code desertion is a term that refers to the phenomenon of abandoning the use of one language in favour of another which may ultimately result in the death of the deserted language.

Q. Decrlisation

This happens when a creole is spoken in a country where other people speak the creole's lexical source-language for example, English. Since the latter has so much more prestige than the creole, creole speakers tend to shift towards it, producing a range of intermediate varieties.

Q. Linguistic Exogamy

There is a rule that if you are listening to someone whom you respect, at least for the first few minutes, you should repeat after them, word-for-word, everything they say. For instance, it would be surprising if any of the languages concerned lacked a word for long-house' or `tribe', and we might reasonably expect a word for `phratry'. The main source of this complexity is the rule of 'linguistic exogamy', which might not be expected to be very widespread in the world. However, the other source is the amount of individual bilingualism (or, more accurately, multilingualism), which makes it hard to decide who is a speaker of a given language and who is not.

Q. Application of sociolinguistic:

A sociolinguist might determine through the study of social attitudes that particular vernacular would not be considered appropriate language use in a business or professional setting. Sociolinguists might also study grammar, phonetics, vocabulary, and other aspects of a sociolect, much as dialectologists would study the same for a regional dialect.

Q. social class:

Social class is a central concept in sociolinguistic research, one of the small number of social variables by which speech communities are stratified. Trudgill(1974) asserts, "most members of our society have some kind of idea, intuitive or otherwise, of what social class is," and both specialists and laypeople agree. Social class is often defined in an ad hoc way which is very ironic because it is a very important variable in sociolinguistic studies. Despite the lack of a consensus of definition of social class, it is a significant term in Sociolinguistics.

Q. Contact language

Language contact occurs when speakers of two or more languages or varieties interact and influence each other. The study of language contact is called contact linguistics. Sometimes unrelated languages that are typical of creole language formation come in contact. There are some constraints on the outcomes of language contact other than the principle of localisation. A constraint relates to the aspect of space. Another constraint is concerned with speaker's attitudes. Another constraint is of social factors. Yet another is social rigidity in which an innovation is being introduced. So, language contact occurs in a variety of phenomena, including language convergence, borrowing and relexification. The most common products are pidgins, creoles, codeswitching, and mixed languages. So, language contact is not as free as it seems to be.

Q. What are the official languages in pakistan?

Urdu is the official language. But it is not the first language of the majority. Urdu is written in a modified version of the Persian script, from right to left. It is not indigenous to Pakistan and in its literary form it emphasizes words of Persian and Arabic origin. It enjoys great prestige as a symbol of the Pakistan movement and as the national language of Pakistan. The greatest concentration of speakers of Urdu is in Punjab and Karachi. If within the hierarchy of languages English comes on the top, second position goes to Urdu. Urdu is preferred against all the regional and local languages for use in all the formal situations, though with the passage of time English is taking its

place in the formal sphere of life. In spite of its status as the national language, however, only a few percent of Pakistanis speak Urdu as their first language.

Q. Write any three effects to change the language.

1. Grammar may be on a road to extinction in the brave new world of emoticons, texts, tweets, and short Facebook posts.
2. Internet chat-rooms and social networking sites are encouraging children to write syntactically incorrect sentences.
3. From the introduction of new words to new meanings for old words to changes in the way we communicate, social media is making its presence felt.
4. Acronyms, abbreviations, and neologisms have grown up around technologically mediated communication to help us be understood.

Here are some examples of acronyms such as:

LOL = laughing out loud

TGIF=Thank God it's Friday

Q. Reasons armchair

Armchair approach' can be termed as dangerous for two reasons if, it is applied to personal experience alone. Firslty, the most of us are not consciously aware of the vast range of variations in speech which we hear and react to in our everyday lives. Secondly, personal experience is a very limited base from which to generalize about language in society, since it does not take account of all the other societies where things are arranged very differently. However, the reason why interest in sociolinguistics has grown so rapidly over the last decades is not because of the achievements in armchair theorizing but due to the empirical discoveries made in the course of systematic research projects.

Q. Prestige code mixing

Motivational force behind mixing is the prestige factor. Prestige is attached to a language; and people insert the words of that language in their base language. Also, in order to develop intimacy and communication friendliness with the other participant/s a speaker/participant may code-mix. It is used as a tool for creating linguistic solidarity.

It functions as a bridge that builds solidarity. A switch or a mix can also be made to convey a specific attitude to the listener. It can be equated with the change in degrees of formality in speech in monolingual speakers

Q: Regional Dailect

If we consider the most straightforward variety differences based on geography, it should be possible, if the family tree model is right, to identify what are called REGIONAL DIALECTS within any larger variety such as English. Since the 19th century, dialectologists in Europe and the United States have been studying the geographical distribution of linguistic items, such as pairs of synonymous words for example, pail versus bucket, or different pronunciations of the same word, such as farm with or without the /r/. Their results are plotted on a map, showing which items were found in which villages since dialect geography tends to concentrate on rural areas to avoid the complexities of towns.

Q. Define term lect:

In sociolinguistics, a variety is also called a lect. It is a specific form of a language or language cluster. This may include languages, dialects, registers, styles or other forms of language, as well as a standard variety. Linguists speak of both standard and non-standard varieties. The term variety is advantageous in the sense that it helps to avoid the use of the term language, which has its own issues such as the divisions or differences as a 'standard

language', and the term 'dialect' used for non-standard varieties being thought of as less prestigious or "correct" than the standard language.

"Lect" avoids the problem in ambiguous cases of deciding whether two varieties are distinct languages or dialects of a single language. Variation at the level of the lexicon such as slang and argot, is often considered in relation to particular styles or levels of formality (also called registers), but such uses are sometimes discussed as varieties as well

Q. differentiate between inter-sentential & intra-sentential switching

Intra-sentential Switching: This takes place within the boundaries of a sentence or a clause. This is limited to the mixing of words or phrases of one language into the other.

Inter-sentential Switching: This takes place at the boundary of sentences or clauses. So, te speaker switches from one language to the other as he or he moves from one sentence/ clause to the other.

Q. 2types of fairclaugh

Fairclough (1989) discusses two types of power: coercion and consent. He mentions ideology as the means to obtain consent, since through ideology individuals are led to view reality acritically, alienating themselves from the objective facts. Coercive or direct power may face resistance since the exploitative intention becomes explicit. In the context of the lives of nations issues of language, ideology, and power are interconnected. For example, if we look at our own historical context, language ideology and creation of Pakistan are closely connected.

Q. Value of family tree in linguistic history:

The value of this model for historical linguistics is that it clarifies the historical relations among the varieties concerned. And, it gives a clear idea of the relative chronology of the historical changes by which these varieties have diverged. From the present point of view, the advantage is that a family tree shows a hierarchical relation among varieties which makes no distinction between 'languages' and 'dialects'. Indeed, it is common in historical linguistics to refer to the varieties which are descended from Latin as 'dialects' of Latin (or 'the Romance dialects'). Although they include such obvious 'languages' (in the prestige sense) as Standard French. If we had wished to add Yorkshire English and Cockney to our list of varieties, we would simply have added them below English, without giving them a different status from the others

Q. iff between linguistics and sociolinguisctics.

Linguistic is the study of language includes psycholinguistics, historical linguistics, morphology, syntax, semantic etc. Sociolinguistics is the study of variation of language in use. We use different words in grammatical forms depending or context.

Q. Components of social class

1. The objective, economic measures of property ownership and the power and control it confers on its possessor
2. The subjective measures of prestige, reputation, and status

Q. examples of corprot jargon

Known as corporate speak, corporate lingo, business speak, business jargon, management speak, workplace jargon, or commercialese, is the jargon often used in large corporations, bureaucracies, and similar workplaces. The use of corporate jargon, also known as "corporatese", is criticised for its lack of clarity as well as for its tedium, making meaning and intention opaque and understanding difficult.

Q. Politeness

At the outset we need to consider "What is politeness?". In Linguistics/ Pragmatics politeness is somewhat different from its general concept. Politeness encodes social distance. It tells us who is speaking to whom. It is a social norm and operates on the basis of a set of prescriptive social rules. When we say we can encode social distance through politeness it means that the language choices made by speakers tell us about their social distance from the other interlocuter.

Q. Define Sociology of Language

Sociology of language is the study of the relations between language and society. The difference between the two is quite clear. Sociolinguistics focuses on the effect of society on language. Sociology of language focuses on the effect of language on society. As far as the sociology of language is concerned, it would seek to understand the way that social dynamics are affected by individuals. According to SuChiao Chen, language is considered to be a social value within this field, which researches social groups for phenomena like multilingualism and lingual conflict. It deals with who is 'authorized' to use what language, with whom and under what conditions. It also deals with how an individual or group identity is established by the language that is available for people to use.

Q. Sociolinguistics and other disciples:

- Discourse Analysis
- Pragmatics
- Ethnography

Q. Idiom

Any expression that means something other than its words seem to suggest can be called an idiom. The study of language constantly requires in interpretation of socially determined meaning. Proverbs and idioms are also determined by a sociogeographical experience. Proverbs, like riddles, jokes or fairy tales, do not fall out of the sky and neither are they products of a mythical soul of the folk. Instead they are always coined by people in context.

Q. high variety of language

The high variety may be an older stage of the same language as in medieval Europe, where Latin remained in formal use even as colloquial speech diverged. The high variety may be an unrelated language, or a distinct yet closely related present day dialect.

Example: Standard German alongside Low German.

Q. why people are leaving their mothr tongue ?

Linguistic consequence of all this is that a child's mother does not teach her own language to the child, but rather a language which she speaks only as a foreigner as though everyone in Britain learned their English from a foreign aupair girl. One can thus hardly call the children's first language their 'mother-tongue' except by a stretch of the imagination. The reports of this community do not mention any widespread disruption in language learning or general 'deterioration' of the languages concerned.

Q. Ethnography of communication ?

Hymes is best known for his founding role in the ethnography of communication. He proposed the term 'ethnography of speaking'. But later he amended it to 'ethnography of communication'. It was a new approach to understanding language in use (Hymes, 1962, 1964). Ethnographies of communication must 'discover and explicate the competence that enables members of a community to conduct and interpret speech' (Hymes, 1972). The exploration and documentation of communicative competence within a speech community is the essence of the ethnography of communication. As a means to this end, Hymes defines the social units and units of analysis for ethnographies of communication

Q. Halliday presents three demension discuss ?

Halliday (1978, p. 33) distinguishes three general types of dimension: 1. Field, 2. Mode and 3. Tenor. Field is the purpose and subject-matter of the communication Mode refers to the means by which communication takes place — notably, by speech or writing. Tenor depends on the relations between participants. Field refers to 'why' and 'about what' a communication takes place; mode is about 'how'; tenor is about `to whom' (i.e. how the speaker views the person addressed). For example:

the relations between speaker and 'addressee' involve such dimensions:

1. 'power', refers to addressee is subordinate, equal or superior to the speaker,
2. 'solidarity' distinguishes relatively intimate relations from distant

Q. Critical period theory:

According to the critical period theory if learning takes place after the critical period (usually considered around puberty) for acquiring native-like pronunciation, an individual is unlikely to acquire a native-like accent. There are social factors that play a role in this regard. When a group defines a standard pronunciation, speakers who deviate from it are often said to "speak with an accent". People from the United States would "speak with an accent" from the point of view of an Australian, and vice versa.

Q. Concept of language commodation .

Communication accommodation theory (CAT) is a theory of communication developed by Howard Giles. This theory concerns "(1) the behavioral changes that people make to attune their communication to their partner, (2) the extent to which people perceive their partner as appropriately attuning to them."[1] The basis of the theory lies in the idea that people adjust (or accommodate) their style of speech to one another. Doing this helps the message sender gain approval from the receiver, increases efficiency in communication between both parties, and helps the sender maintain a positive social identity. This theory is concerned with the links between language, context, and identity

Q. Perspective of languague 2 main branches.

1. Anatomy of Language (Structure)
2. Physiology of Language (Functioning)

Q. Language reportier: Or Language variety:

If one thinks of 'language' as a phenomenon including all the languages of the world, the term variety of language can be used to refer to different manifestations of it e.g. music = 'varieties of music'. So, the question arises what makes one variety of language different from another. The simplest answer can be: "the linguistic items". We may define a variety of language as a set of linguistic items with similar social distribution. Still the question of varieties of language needs further clarity.

Q: language ideology

The ideology of a standard language is a complex issue. If we look at many widely used languages, such as English, French and Spanish, each possesses a standard variety. This affects how speakers think about their own language and about language in general. Speakers of such widely used languages, unlike speakers of some less well known languages, live in standard language cultures. In such cultures, language attitudes are dominated by powerful ideological positions that are largely based on the supposed existence of this standard form, and these taken together, can be said to constitute the standard language ideology or 'ideology of the standard language'.

Q: what are principle of study to dialect

First Premise: Linguistics is a descriptive rather than a prescriptive discipline.

- Profession
- Regional Context
- Religion
- Social Class
- Historical Contexts
- Family and Friends

Second Premise:

Every naturally used language variety is systematic with regular rules and restrictions at the lexical, phonological and grammatical level. Linguists use the term 'dialect' as a neutral term to refer to the systematic usage of a group of speakers—those in a particular region or social class. No negative connotations such as of "nonstandard" or "substandard" speech.

Thrid Premise: Primary attention to speech rather than writing

Q: differentiate between monolingual and multilingual.

Monolingualism

Monolingualism, has been taken as the natural human condition. Yet, both historically and currently, most of the world's communities and a majority of speakers are multilingual to a greater or lesser extent.

Multilingualism

Multilingualism is the use of more than one language by a single individual or community. In the popular imagination and in linguistic theory, multilingualism is often assumed to be an anomalous, exceptional practice

The Critical Period Theory

According to the critical period theory if learning takes place after the critical period (usually considered around puberty) for acquiring native-like pronunciation, an individual is unlikely to acquire a native-like accent. There are social factors that play a role in this regard. When a group defines a standard pronunciation, speakers who deviate from it are often said to "speak with an accent". People from the United States would "speak with an accent" from the point of view of an Australian, and vice versa.

Prestige

Prestige is attached to certain accents. Some accents are perceived to carry more prestige in a society than other accents. Reason is their association with the elite. An example from the UK is of 'Received

Pronunciation'.

Under the Official Languages Act of 1969, both English and French have official federal status throughout Canada. Canada's linguistic diversity extends beyond the two official languages. In Canada, 4.7 million people (14.2% of the population) reported speaking a language other than English or French most often at home. The relationship between the English and French languages is the central or defining aspect of the Canadian experience.

Language in Canada

Multiple languages are used in Canada. English is the mother tongue of 56.9%; and French is the mother tongue of 21.3% according to 2011 census. In total, 85.6% of Canadians have working knowledge of English. 30.1% have a working knowledge of French.

Q. Martha Vineyard

The first social dialect study was conducted in the summer of 1961 on Martha's Vineyard, an island off the coast of Massachusetts in the north-eastern United States. Martha's Vineyard was then already something of a summer

playground for people who live most of the year on the mainland US – in the 1960s, the number of residents during the summer increased nearly seven times over the winter population. This has only increased in the years since; in the year 2000, the year-round population on the Vineyard was 14,000, but during the summer the population of the island ballooned to 100,000. Moreover, there is a big discrepancy between the circumstances of the summer-only people and the year-rounders. The cost of housing on the Vineyard is fabulously expensive, driven up by the intense demand of summer residents, yet the island has the second-lowest per capita income in the entire state of Massachusetts. Many year-rounders on the Vineyard struggle quite hard to get by and increasingly have to do so by providing services for the summer visitors.

Q. cause of language variation

1. Nature of participants, their relationship (socio-economic, sexual, occupational, etc.)
2. Number of participants (face-to-face or one addressing a large audience, etc.)
3. Role of participants (teacher/student /priest/ father/son/ husband/ wife, etc.)
4. Function of speech event (persuasion, request for information ritual, verbal, etc.)
5. Nature of medium (speech, writing, scripted speech, speech reinforced by gesture, etc.)

Q. Factor of code mixing

1. Motivation
2. Discourse functions
3. Social standing of the group
4. Speaker
5. Setting

Q. Social dialect

Dialect differences are not only geographical. Dialectologists, therefore, speak of social dialects, or sociolects, to refer to nonregional differences. A speaker may be more similar in language to people from the same social group in a different area than to people from a different social group in the same area. Hierarchical social structure such as we

Find in Britain, where social class takes precedence over geography as a determinant of speech, there is far more geographical variation among people in the lower social classes than there is amongst those at the `top' of the social heap. This has gone so far that people who have passed through the public school system typically have no regional traits at all in their language. This is a peculiarity of Britain, however, and is not found in other countries such as the United States or Germany, where `top people' show their region of origin at least through their pronunciation

THE END
