بِسۡمِ ٱللَّهِ ٱلرَّحۡمَٰنِ ٱلرَّحِيمِ

In the name of God, Most Gracious, Most Merciful

ENG512

Objective

- **Bilinguality** is the psychological state of an individual who has access to more than one linguistic code as a means of social communication
- **Language** is never static but changes over time
- Language **dimensions** vary from culture to culture.
- A language has more **linguistic items** than a dialect
- Bilingual allows someone to **bridge** the generations
- Bilinguality is related to **societies**
- Term has been used in early bilingualism stage **bilinguality**
- Language shift is resisted in **intimate** and informal situation
- Language is the individual self regulatory **behavior**
- Language is the product of **culture**.
- Language function are **universal**
- **Monolingual** situation is cognitive.
- There is a need to **operationalize** the concept of bilingualism.
- Cognates are the words that have **common origin**
- Bilinguality is related to **individuals**.
- Language is the individual's **self regulatory**.
- A language has more linguistic items than a **dialect**.
- Bilingualism does not have a **single** definition.
- Pakistan is a **multilingual** society .
- Concept of bilingual education …. **4000-5000**
- We are living an **social** community
- We mean by a **bilingual** a person
- In real life , the communication is **uni-directional**
- Mix languages more often **adults**
- Language is strongly related to **correlation**
- Speech events **linguistic** exchanges
- Language usage value varies with social **background**
- Official language are there in Africa. **11**
- Characteristic of a research **baised**
- **Frequency** how often are language used?
- Sees language boundaries as fuzzy? **Linguistic**
- Language is strongly related to **social** networks
- Inner speech is also known as **internal speech**

- **GIDS stand for graded intragenerational disrupted scale**
- New concurrent approach was not **popular**
- **Flexible** multiplicity reminds of recursive bilingualism
- **Language** policies are dictated from top down
- **Community** language rights respected by others
- the individual level, higher-order behavior is **self**-**regulated**.
- The child is initially equipped with 'a set of predispositions to construe the social world and to act upon our construal (**Bruner**,**1990**)
- **monolingual situation**, in addition to its communicative and cognitive functions, language has a social function
- **Languages** and varieties of language (accents, dialects, sociolects, and codes) have a recognized value on the linguistic market (Bourdieu, 1982) and can be placed on a hierarchical scale
- There is a constant interaction between the **societal** and the individual dynamics of language
- There is a **reciprocal interaction** between culture and language
- **Self**-**regulation** characterizes all higher-order behaviours, and therefore language
- **Valorization** is central to these dynamic interactions
- **multidimensional** nature of bilingualism, calls upon an array of disciplines ranging from neuropsychology to developmental psychology,
- **Bilinguality** is a **psychological** state of an individual who has access to more than one linguistic code as a means of social communication
- **Balanced bilinguality**: equal proficiency in both languages
- **Dominant bilinguality**: higher proficiency in one language
- inevitable perhaps that an enormous amount of '**language contact'** takes place when we speak of 'language contact'
- **Sociolinguists** have shown how monolingual behaviour varies according to a number of parameters
- **bilingual community** is either composed of two groups speaking two different languages as their mother tongue along with a small number of bilinguals speaking
- language, used as a **lingua franca**

- **Territorial bilingualism** is a situation in which each group finds itself mostly within its own politically defined territory with the two
- bilingual community can be described as **diglossic**,
- **Monolinguality** is more commonly found in economically dominant groups whereas the members of minority or subordinate groups tend to be bilingual or multilingual.
- **bilinguality** consists in taking measures in each of the bilingual's two languages and comparing them.
- **comparative** approach is the only valid one when **bilinguality** is measured on the 'additive— subtractive'
- **semantic** interdependence between the **two** codes
- A bilingual also develops patterns of behaviour that are unique to his state of **bilinguality** (Grosjean, 1985)
- discussion revolves around how much proficiency in two **languages** is required by an individual to be labeled as a bilingual
- **Language** is believed to be a larger repertoire of linguistic items and subsuming dialects.
- The difference between a **dialect** and **language** is also explained in terms of their mutual intelligibility i.e. where two languages may not be mutually understood by speakers, the dialect of a language might be mutually understood
- **Researchers** of bilingualism generally agree that language choice is an 'orderly' social behaviour, rather than a random matter of momentary inclination
- **Diglossia** not only defines a concept but also develops an approach to bilingualism which has been extremely influential.
- A distinction is made between **High** (H) and Low (L) language varieties and Ferguson noted nine areas in which H and L could differ
- **Multilingual** countries are often thought to have certain problems which monolingual states .
- **Multilingualism** is an important resource at both the societal and personal levels.
- **multilingual** societies tend to assign different roles to different languages;
- **Multilingualism** is a problem for government

- **frequently asked question** is whether a bilingual speaker's brain functions differently from that of a **monolingual's** brain
- Speakers of different proficiency levels or at different **acquisitional stages** vary in strength and directness of the interconnections between the separate stores in language **processing**;
- **code-switching** grammar calls into question the traditional view of the bilingual as two monolinguals in one person.
- **speakers** are often compared to monolinguals in terms of their language proficiency
- early **nineteenth** century to about the 1960s, there was a widespread belief that bilingualism has a detrimental effect on a human being's intellectual and spiritual growth.
- **bilingual** who could not acquire full competence in any of the languages were termed as '**semilinguals'**.
- They were believed to have linguistic deficits in **six** areas of language (see Hansegard, 1975; Skutnabb
- **monolinguals** is also unfair
- **1960s**, there has been a political movement, particularly in the US, advocating language rights
- **Bilingual** has a chance to communicate with a wider variety of people than a **monolingual**.
- A person with two languages may have a wider **portfolio** of jobs available
- social and individual, may be falsely attributed to **bilingualism**
- **Bilingualism** is not a static and unitary phenomenon. It is shaped in different ways, and it changes depending on a variety of historical, cultural, political, economic, environmental, linguistic, **psychological**.
- **external functions** of bilingualism are determined by the number of areas of contact and by the variation of each in duration, frequency, and pressure.
- **bilingual's language** contacts may be with the languages used in the home, community, school, mass media and correspondence.
- **40 years** old bilingual who has spent all his life in a foreign neighborhood is likely to know the language better than one who has been there for only a few years

- The duration of contact is not significant, however, unless we know its **frequency**.
- **Bilingualism** is not only related to external factor
- A person's **bilingualism** is reflected in the internal uses of each of his languages
- **sex** is a factor in language development
- **memory** is a fact or in imitation, it is also a factor in bilingualism
- The regulatory factor of situation has been used to designate a large (and, at times, confusing) variety of **considerations**.
- **Nine domains** recommended by **Schmidt**-**Rohr** were: the family, the playground and street
- **Braunshausen** and also **Mackey** (**1962**) have merely specified family "members": father, mother, child, domestic, governess and tutor
- **Verbal communication** may be seen as a two-step process
- A set of maxims referring to the choice of one **linguistic** variety rather than another relates to the negotiation principle.
- This principle of '**anchorage'** effectively limits the field of network studies, generally to something between **20** and **50** individuals
- **Michael Clyne** argues that the grammatical constraints and the grammatical models of code-switching cannot be substantiated universally
- **bilingual** children mix elements from their two languages is often interpreted as evidence for a unitary underlying language system
- Jürgen M. **Meisel** addresses the 'one system or two' question by focusing on the syntactic and morphological development of bilingual
- language behaviour is referred to as **code**-**switching**
- Words from the two languages did not belong to two different speech systems but to one…' **(In Hatch, 1978:27). Swain (1977)**
- postulated a '**common storage model'** of bilingual development according to which all rules of both
- **languages** are initially stored in a common location and subsequently tagged as appropriate for a particular language through a process of differentiation.
- **Volterra** and **Taeschner** (1978) have interpreted language mixing in terms of a three stage model:

- Differentiation of the lexicon but continued unification of **syntax**
- **Swain's (1972)** thesis—Bilingualism as a first language —exemplifies the unitary-system interpretation of early bilingual development.
- **Mixing** has also been reported in cases of overly restricted use of specific lexical item
- **Swain and Wesche** (1975) have suggested that in some cases bilingual children identify a referent with the lexical item in the language that was first or most frequently used to label it
- **monolingual** children (Griffiths, 1986) with the difference that bilingual children overextend inter-lingually .
- **Anglin (1977)** has suggested that in fact under-extensions are more frequent than overextensions in monolingual development.
- **Slobin (1973**) has argued for a set of universal operating principles which every child brings to bear on the problem of language acquisition,
- Studies of the language **development** of bilingual children can be based on parental diaries.

SUBJECTIVE

Q. Use of language

Studies have shown that the language use of bilinguals responds to their communicative and affective intent, as well as to the situation and the interlocutor. Fishman et al. (1971) proposed the construct of domains as such, domains are "a sphere of activity representing a combination of specific times, settings, and role relationships" (Romaine, 1994: 43). Domains allow scholars to make connections between, on the one hand, clusters of interaction and interlocutors, and on the other, more concrete social situations.

Q. How external functions of Bilingualism are determined?

External functions of bilingualism refer to the social, cultural, and economic factors that influence an individual's language use and proficiency. These functions are determined by:

Q. Sociolinguistic context (e.g., language policies, social norms

- ♣ Cultural background and identity
- ♣ Economic opportunities and mobility
- ♣ Educational institutions and language instruction
- ♣ Family and community language use
- ♣ Government policies and language planning

Q. Linguistic capital refers to the value assigned to language skills and proficiency in social and economic contexts. In schools, linguistic capital is valued through:

- ❖ -Language curriculum and instruction
- ❖ - Assessment and evaluation methods
- ❖ - Teacher expectations and attitudes
- ❖ - Peer interactions and socialization
- ❖ - Language support services (e.g., ESL programs)

Q. Schools can promote linguistic capital by:

- ♣ Valuing diverse languages and dialects
- ♣ Providing language support and resources
- ♣ Encouraging language maintenance and development
- ♣ Fostering inclusive language policies

Q. Why the domains and measurements of Bilingualism are interrelated?

- ♣ Language proficiency affects cognitive abilities (e.g., problem-solving, metalinguistic awareness)
- ♣ Social interactions influence language use and development
- ♣ Emotional factors (e.g., motivation, anxiety) impact language learning
- ♣ Linguistic competence affects academic and professional opportunities

- ♣ Measurements of bilingualism (e.g., language tests, self-assessments) must consider these interrelationships to accurately capture an individual's bilingual proficiency.

Q. Difference between balanced and dominant bilingualism?

Balanced bilingualism:

- ♣ Proficiency in both languages is relatively equal
- ♣ Similar language abilities in both languages
- ♣ No significant language dominance

Dominant bilingualism:

- ♣ One language is significantly more proficient than the other
- ♣ Language dominance affects language choice and use
- ♣ May lead to language shift or loss

Q. Discuss 5 domains of language behavior?

1. Linguistic Domain: phonology, grammar, vocabulary, discourse

2. Cognitive Domain: language processing, problem-solving, metalinguistic awareness

3. Social Domain: language use in social interactions, communication styles, social identity

4. Emotional Domain: language attitudes, motivation, anxiety, emotional expression

5. Pragmatic Domain: language use in context, communication strategies, implicature

Q. Describe how oral communication is a two-way process?

Oral communication involves:

- ♣ Sender: encoding and transmitting message
- ♣ Receiver: decoding and interpreting message

- ♣ Effective oral communication requires:

Active listening

- ♣ Feedback mechanisms (e.g., verbal, nonverbal cues)
- ♣ Mutual understanding and clarification
- ♣ Adaptation to context and audience

Q. Define the term language proficiency

Language proficiency is the ability of an individual to use language with a level of accuracy that transfers meaning in production and comprehension. The word, proficient, means a well advanced skill level. In terms of language, the “proficient” label can refer to someone who is very skilled in the use of a language but who uses the language less easily and at a less-advanced level than a native or fluent speaker.

Language and Dialect on the basis of size?

Language:

Spoken by a large group (millions), has standardization, codification, and official recognition.

Dialect

Spoken by a smaller group (thousands), has variations in vocabulary, pronunciation, and grammar.

Example: Mandarin Chinese (language) vs. Hokkien (dialect)

Inner Speech with example?

Inner speech refers to the internal verbal thinking process.

Example: "I need to remember to buy milk tomorrow." (thought to oneself)

Pragmatic Mixing

Pragmatic mixing occurs when bilingual speakers combine elements from two languages to convey meaning effectively.

Example: "I'm going to la biblioteca (library) to study for mi examen (exam)." (mixing Spanish and English)

Challenges of Domain Analysis

1. Defining boundaries between domains
2. Identifying relevant linguistic features
3. Accounting for language variation
4. Considering social and cultural context
5. Quantifying and measuring language use

Components of Language in Multilingual Context

1. Phonology (sound system)
2. Grammar (syntax and morphology)
3. Vocabulary (lexicon)
4. Discourse (communication structure)
5. Pragmatics (language use in context)

Discuss Norway's Enjoy Great Prestige Dialect

Reasons for prestige:

1. Historical significance
2. Literary and cultural importance
3. Official recognition
4. Widespread use in education and media
5. Symbol of national identity

Jürgen M Meisel

1. Language acquisition
2. Bilingualism
3. Multilingualism

4. Language contact

5. Code-switching

Second stage of Three-Stage Model

1. Pre-production (silent period)

2. Early production (second stage):

3. Speech emergence (advanced production)

Bilinguality

- ♣ Simultaneous bilingualism (acquiring two languages from birth)
- ♣ Sequential bilingualism (acquiring a second language later in life)

Language Choice Based Patterns

- ♣ Social context (e.g., family, friends, work)
- ♣ Communicative purpose (e.g., formal, informal)
- ♣ Interlocutor (e.g., language proficiency, cultural background)
- ♣ Domain (e.g., education, media)
- ♣ Topic (e.g., personal, professional)

Five Basic Assumptions Regarding Educational Behavior

1. Learning is a purposeful and goal-oriented process.

2. Behavior is influenced by environment and context.

3. Motivation plays a crucial role in learning.

4. Prior knowledge and experience affect learning outcomes.

5. Feedback and reinforcement shape educational behavior.

Explicit Instruction

Characteristics:

- ♣ Clear explanations
- ♣ Demonstrations

- ♣ Guided practice
- ♣ Feedback

Usage:

- ♣ Language teaching (e.g., grammar rules)
- ♣ Literacy instruction (e.g., phonics)
- ♣ Math education (e.g., problem-solving strategies)
- ♣ Special education (e.g., adaptive skills)
- ♣ Professional training (e.g., technical skills)

Q. How does domain configuration happen in language variance

A description and analysis of the simultaneous, cumulative effect of all of the above-mentioned sources of variance in language choice provides a dominance configuration (Weinrich, 1953). Dominance configurations summarize data on the language choice behaviour. Repeated dominance configurations for the same population, studied over time, may be used to represent evidence of language maintenance or shift in a particular multilingual setting. Although the dominance configurations till requires much further refinement, it seems to merit the time and effort that such refinement might necessitate.

Q. How do pidgins emerge?

Language is never static but changes over time. Pidginsation is an example in this regard which is developed for the purpose of minimal communication between individuals/ groups speaking mutually unintelligible vernaculars. In the pidginisation process, limited and simplified linguistic forms are developed. As the need for communication or function increases in the society, new forms are created by the speakers. Gradually these new forms serve extended functions until pidgin evolves into a creole (form) as it becomes the mother tongue of the next generation, and thereby serves new functions.

Q. Make a list of different sources of language variation that have been considered by researchers.

Contacts with each of the above are as may vary in duration, frequency, and pressure. They may also vary in the use of each language for comprehension(C)

only, or for both comprehension and expression (E). Variation in language contact may occur in form of “Duration”, “Frequency”, and “Pressure“ and due to internal factors. Internal Factors are uses & aptitude (sex, age, intelligence, memory, attitude, motivation)

Q. What did Voterra and Taeschner argue in Three Stage Model

1. Initial unification of both lexical and syntactic subsystems
2. Differentiation of the lexicon but continued unification of syntax
3. Finally, differentiation of both the lexicon and syntax

DEFINE DURATION AND FRQUENCY.

Duration: The amount of influence of any area of contact on the bilingualism of the individual depends on the duration of the contact. A 40 years old bilingual who has spent all his life in a foreign neighborhood is likely to know the language better than one who has been there for only a few years.

Frequency: The duration of contact is not significant, however, unless we know its frequency. Frequency for the spoken language may be measured in average contact-hours per week or month; for the written language it may be measured in average number of words.

Q. 21 century other ways of communication

Communication is dramatically changed by new technologies. In the 20th century, we have seen the effects of the telephone, radio and television, film, high-speed printing, xerography, desk-top publishing, electronic mail. These communication technologies have changed our national political life, corporate management styles, family connections, individual work habits. Additional change in the next century is inevitable, as we adopt video conferencing, multimedia, and internet technologies. Many of the effects of new technologies are unpredictable: the predicted “paperless office” has failed to materialize, for example, and word-processing software has transformed the labor of writing in a way that was never anticipated (and initially was resisted) by computer developers.

Q. Enlist ways of communication in 21st century

Bilingualism for the twenty-first century must be more than the knowledge of two languages. Abilities such as translation, language switching and designing information bilingually will be increasingly important, abilities that are supported by the community's translanguaging. The recursivity and dynamism of bilingualism today, that is, its adaptive nature to an increasingly socially complex context, demands bilingual skills that are much more than just monolingual skills in two separate contexts. If we focus then not on separate languages as we have done in the past, but on the bilingual or multilingual discourse practices that we need and that are readily observable in bilingual classrooms, we can see that bilingual arrangements that build on translanguaging are the only way to build the plurilingual abilities that we will need in the future.

Q. Stances which are taken for domain variation source

Domain Variance: Degree of maintenance or shift may be quite different domain Depending on each of several factors, power, autonomy and interaction. All these factors lead to domain configuration

Q. Inner speech and clarify your answer with example

Inner speech is a form of internalized, self-directed dialogue: talking to oneself in silence. It is a use of language to regulate internal thought without any external articulation For Example: In real life when we face any problem or wants to solve any problem whether it's being related to social life or academic life, we use our inner speech as we talk internally for its solution.

Q. 6 areas of language deficit in bilinguals

1. Size of vocabulary
2. Correctness of language
3. Unconscious processing of language
4. Language creation
5. Mastery of the functions of language
6. Meanings and imagery

Q. 3 components of language use in multilingual context

Multilingual countries are often thought to have certain problems which monolingual states do not. On the practical level, difficulties in communication are one. It should be pointed out that there is no scientific evidence to show that multilingual countries are particularly disadvantaged, in socio economic terms, compared to monolingual ones. Although, it might be true that linguistic uniformity and economic development reinforce each other; in other words, economic wellbeing promotes the reduction of linguistic diversity. Multilingualism is an important resource at both the societal and personal levels. For a linguistically diverse country to maintain the ethnic-group languages alongside the national or official language(s) can prove to be an effective way to motivate individuals while unifying the nation. Additionally, a multiethnic society is arguably a richer, more exciting and stimulating place to live in than a community with only one dominant ethnic group. For the multilingual speaker, the availability of various languages in the community repertoire serves as a useful interactional resource.

Q. Metalinguistic skills

Metalinguistic skills involve the awareness and control of linguistic components of language. Simply put, it implies the ability to think and discuss language. These skills require an awareness of others as listeners and an ability to recognize significant details that indicate changes in speech. According to Text in Education and Society, some examples of metalinguistic skills include discussing, examining, thinking about language, grammar and reading comprehension.

Q: Metalinguistic awareness

Metalinguistic awareness is the ability to attend to and reflect upon the properties of language. This is hypothesized to be because bilingual children s knowledge of two languages may increase their understanding of language structure and overall language analysis abilities

1. language-processing skill
2. Marked and unmarked language choice
3. Three language rights

Q. Name all key factors and sub factor of language contact

1. Variation in language contact

i. Duration

ii. Frequency

iii. Pressure

2. Internal factors

1. uses
2. aptitude (sex, Age, Intelligence, memory, attitude, motivation)

Regularity

The meaning attached to local descent and dialect use— being part of the "local team"—is clearly seen when we consider those members of the community who dissociate themselves from this "team." Traditionally, in northern Norway the local community of equals was separated from the landowning commercial and administrative elite by a wide gulf of social and judicial inequality. Since the latter were the introducers and users of standard Norwegian, the standard form was—and to some extent still is—associated with this inequality of status. Many of the functions of the former elite have now been incorporated into the local social system. Individuals who fill these functions, however, continue to be largely of nonlocal descent. Although they may pay lip service to locally accepted rules of etiquette and use the dialect on occasion. Since the different social meanings which attach to the dialect are regular and persistent, they must in some way be reinforced by the pattern of social ties.

Q. Semantic mixing

At a time when we use certain words or utterances which are equivalent to usage and utterances in other language.

"Open the light" in French is equivalent to "turn on the light" or "switch on the light" in English Speech act

Speech acts are the speaker's utterances which convey meaning and make listeners do specific things. (Austin, 1962). According to Austin (1962), when

saying a performativity utterance, a speaker is simultaneously doing something. For example: Exchange greeting, telling jokes, giving speeches, requesting help, complaining etc

Diglossia

not only defines a concept but also develops an approach to bilingualism which has been extremely influential. It originates from the fact that the co-existing languages of a community are likely to have different functions and to be used in different contexts. A distinction is made between High (H) and Low (L) language varieties and Ferguson noted nine areas in which H and L could differ. OR Two languages are spoken by a variable section of the population, but they are used in a complementary way in the community, one language or variety having a higher status than the other and being reserved for certain functions and domains.

Q. Factors that affect research

The effects of age, gender and educational background of the researcher on the data that he or she collects and ultimately analyses have been discussed extensively by sociolinguists (e.g. Milroy, 1987). Successful investigation requires the researcher's sensitivity to the context of the study, willingness to overcome difficulties and honesty about his or her identity, attitude and research agenda.

Q. Bilingual education?

Bilingual education is different from traditional language education programs that teach a second or a foreign language. For the most part, these traditional second- or foreign language programs teach the language as a subject, whereas bilingual education programs use the language as a medium of instruction; that is, bilingual education programs teach content through an additional language other than the children's home language. More than anything else, bilingual education is a way of providing meaningful and equitable education, as well as an education that builds tolerance towards other linguistic and cultural groups. In so doing, bilingual education programs provide a general education, teach in two or more languages, develop multiple understandings about languages and cultures, and foster appreciation for human diversity.

Q. Define regularly?

This term has been used to designate a large (and, at times, confusing) variety of considerations. Indeed, it has been used to designate various separate considerations as well as theircooccurrence. Each of these aspects of "situation" may shed light on certain regularities in language choice on particular social occasions. However, the possible cooccurrence of so many variables must also make it exceedingly difficult to use the concept "situation," for analytic purposes.

Q. Name all key factors and sub factor of language contact

Resettlement of people; religious affiliation; oppression, culture and identity negotiation, economy, education and technology and immigration.

Q. How does the process of domains analysis enable us to systemize and interpret data?

The domain concept has helped organize and clarify the previously unstructured awareness that language maintenance and language shift proceed quite unevenly across the several sources and domains. It has shown that languages in certain domains appear to be more resistant to displacement than others (e.g., the family domain in comparison to the occupational domain) across all multilingual settings characterized by urbanization.

Q. State the suggested findings from swains common storage model in one or two lines.

Swain (1977) postulated a 'common storage model' of bilingual development according to which all rules of both languages are initially stored in a common location and subsequently tagged as appropriate for a particular language through a process of differentiation.

Q. Describe language functions.

Bilingualism can also be a consequence of language function, that is, the use to which one puts either language. In fact, language ability and language function are often interrelated, since one has to have the possibility to function and use a specific language or two languages in order to develop ability to engage in language practices that use either or both of the languages.

Q. What is socio-cultural identity?

Cultural identity is the identity or feeling of belonging to a group. It is part of a person's selfconception and selfperception and is related to nationality, ethnicity, religion, social class, generation, locality or any kind of social group that has its own distinct culture.

Q. UNESCO 1963.

UNESCO, responding to the educational failure of children in colonial situations, issued an important resolution declaring that it was axiomatic that a child be taught to read in their home language. Based on this principle, efforts to use the children's language in education, especially in the early grades, gained strength, leading to the first official uses of what has since been termed "transitional bilingual education," that is, the use of the child's heritage language in the early grades and only until the child is fluent in the majority or colonial language.

Q. Symbolic Capital

Language ideologies represent the cultural system of ideas about social and linguistic relationships, in addition to political and moral interests. Attitudes, values, and beliefs about language are always ideological, and are enmeshed in social systems of domination and subordination of groups, relating to ethnicity, class, and gender. One of the most popular ideologies is precisely that there is, or that there has to be, a link between language and identity, but it is important to recognize that this is a result of the homogenizing work of school in imposing a national standard. This is linked to Bourdieu's concept of linguistic practices as symbolic capital. This symbolic capital is distributed unevenly in the speech community, and as such, there is symbolic violence because the dominant ideas are naturally assumed and the oppressed recognizes the dominant group as superior

Q. state the stances of study of domain variations.

Degree of maintenance or shift may be quite different in each of several distinguishable domains of language behaviour. Q58. linguistic repertoire Linguistic or verbal repertoire is 'the set of language varieties used in the speaking and writing practices of a speech community' (Finegan 2004, glossary). In other words, the linguistic repertoire of a speech community includes all the linguistic varieties (registers, dialects, styles, accents, etc.)

Q. Define Ecology

Linguistic ecology is the study of languages in relation to one another and to various social factors. Also known as language ecology or ecolinguistics. This branch of linguistics was pioneered by Professor Einar Haugen in his book The Ecology of Language (Stanford University Press, 1972).

Q. factor for domain configuration.

Dominance configurations summarize data on the language choice behaviour. Repeated dominance configurations for the same population, studied over time, may be used to represent evidence of language maintenance or shift in a particular multilingual setting. Although the dominance configurations till requires much further refinement, it seems to merit the time and effort that such refinement might necessitate .

Q. The three levels of abstraction are:

The distinction between the compound and coordinate bilingual is one of semantic representations; it implies that for the coordinate bilingual, there is a greater semantic independence between his two linguistic codes, while for the compound there is greater semantic interdependence between the two codes.

Q. Factors effect speech

1. The participants, i.e. speakers, addressees, and audiences;
2. The ecological surroundings; and
3. The topic or range of topics (Hymes, 1964; Ervin-Tripp, 1964).

Q. Language at Societal Level

At the societal level, if a minority language is not valorized and used as a tool for education, language attrition and language shift are likely to occur. At individual level, the positive valorization of a language will trigger off a motivational process for learning and using those aspects of language. Societal (institutions, groups and social classes), social networks and interpersonal relations, individual (developmental, socio-affective, cognitive and neuropsychological processes as well as language behavior). At each of these levels, language behavior is dynamic: there are constant interactions amongst the determining factors within and between the different levels.

Q. Factor of language aptitude.

1. Sex: If sex is a factor in language development, as past research into the issue seems to indicate, it is also a factor in bilingualism (seePealandLambert,1962).
2. Age: Persons who become bilingual in childhood may have characteristics of proficiency and usage different from those who become bilingual as adults. It does, however, show a great deal of forgetting on the part of the child. Indeed, the child's reputed ability to remember is matched by his ability to forget. For him, to be a bilingual may simply mean a transition period from one native language to another.
3. Intelligence: Although it seems safe to include intelligence as a factor in bilingualism, we have as yet been unable to discover its relative importance. Experimental research in

   to the problem has mostly been limited to selected samples of persons of the same intellectual level.

Q. what situations lead to bilingualism in country

1. Prevention of mental health conditions
2. Tolerance towards differences
3. Academic Success
4. Creativity

Q. Name three countries "Territorial Bilingualism"

1. Belgium,
2. Canada
3. India.

Q. functions of language

There are number of functions but main function of language is social and psychological, both social and psychological, can be classified in two main categories: communicative functions and cognitive functions. Functions of language are universal but the linguistic forms vary across languages and culture.

Q. How do we test the degree of bilingualism?

Bilingualism is a relative concept, which involves the question of degree; function; alternation and interference. Degree The first and most obvious thing to do in describing a person's bilingualism is to determine how bilingual he is for the bilingual may not have an equal mastery of all four basic skills in both languages. It is necessary to test each of these skills separately if we are to get a picture of the extent of his bilingualism. If, however, we are only interested in determining his bilingualism rather than in describing it, other forms of tests are possible. The bilingual's mastery of a skill, however, may not be the same at all linguistic levels. Finally, a bilingual's familiarity with the stylistic range of each language is very likely to vary with the subject of discourse. To get an accurate description of the degree of bilingualism, different types and models of language tests have now been developed. Functions: The degree of proficiency in each language depends on its function, that is, on the uses to which the bilingual puts the language and the conditions under which he e has used it. These may be external or internal.

Group membership:

This factor must be viewed not only in a purportedly objective sense, i.e., in terms of physiological, sociological criteria (e.g., age, sex, race, religion, etc.), but also, and primarily, in the subjective sociopsychological sense of reference group membership. The very existence of certain reference groups seems to depend largely on location, setting or other environmental factors rather than on group consciousness or group-experience as such.

The regulatory factor of situation:

This term has been used to designate a large (and, at times ,confusing) variety of considerations. Indeed, it has been used to designate various separate considerations as well as theirco-occurrence. Each of these aspects of "situation" may shed light on certain regularities in language choice on particular social occasions. However, the possible co-occurrence of so many variables must also make it exceedingly difficult to use the concept "situation," for analytic purposes. We can therefore, limit our use of this term to considerations of "style" alone,

and attempt to cope with the other itemized features in other ways and in their own right.

Topic:

Even when reference group and situation agree in requiring a particular language, it is not uncommon to find that topic succeeds in bringing another language to the fore.

Q. What are the factors of domain configuration)

Dominance configurations summarize data on the language choice behaviour. Repeated dominance configurations for the same population, studied over time, may be used to represent evidence of language maintenance or shift in a particular multilingual setting. Although the dominance configurations till requires much further refinement, it seems to merit the time and effort that such refinement might necessitate

Q. which language is used in inner speech?

Quantitative analysis showed that the L1 is generally used more frequently than the L2 in inner speech. We used our first or native language in our inner speech.

Q. what is the significance of bilingual education?

There are a wide variety of benefits of bilingual education. We've found that bilingual people have more advanced cognitive skills than those who speak only one language; additionally, they develop multicultural skills to be able to thrive in an increasingly diverse society. It's even been shown to prevent dementia and Alzheimer's disease. For Latino and Mexican American children living in the United States whose first language is Spanish, it also connects them with their heritage and family. Often, when a student is prevented from developing his or her first language, they cut ties with their family in their country of origin. Bilingualism helps bridge this generational divide.

Q. different types of language variation?

There are two types of language variation: linguistic and sociolinguistic. With linguistic variation, the alternation between elements is categorically constrained

by the linguistic context in which they occur. With sociolinguistic variation, speakers can choose between elements in the same linguistic context and, hence the alternation is probabilistic.

Q. Researchers attitude

Research requires a high level of alertness in planning, executing, observing, recording, and reporting. Educational research therefore develops in the researcher scientific attitudes of objectivity, curiosity and critical outlook.

Q. Two definitions of bilingualism

1: the ability to speak two languages

2: the frequent use (as by a community) of two languages

3: the political or institutional recognition of two languages

Q. Define term linguistic market

The notion of linguistic marketplace, also known as linguistic market, refers to the symbolic market where linguistic exchanges happen. On linguistic markets, linguistic capital—a subtype of the broader concept of cultural capital according to Pierre Bourdieu is exchanged, and different languages and varieties have different symbolic values. On the standard linguistic market, standard languages usually enjoy more value due to the high overt prestige associated with them while on linguistic markets that value non-standard varieties, vernaculars can also enjoy a higher value. This concept has been proven to be useful in understanding other sociolinguistic concepts such as language variation and change and gender.

Q. What are the measures of Bilingual Specificity?

Translation and verbal flexibility are only measures in which the bilingual's behaviour is viewed as the sum of two monolingual behaviours. A bilingual also develops patterns of behaviour that are unique to his state of bilinguality (Grosjean, 1985a). For example, when bilinguals communicate with each other they can make simultaneous use of the resources of each of their languages, for example by borrowing words from one language while using the other (loan words) or by developing mixed or switched codes which are governed by their

own specific rules. There is an attempt to correlate the degree of balance of bilinguals with a high level of competence in rule-governed code-switching.

Q. How Language Planning is difficult in multilingual context?

Multilingualism is a problem for government. The process of governing requires communication both within the governing institutions and between the government and the people. This means that a language, or languages, must be selected as the language for use in governing. However, the selection of the 'official language' is not always easy, as it is not simply a pragmatic issue. For example, old colonial language as official language though pragmatic will not, however, is a good choice on nationalist grounds. In many other multilingual countries which do not have a colonial past, such as China, deciding which language should be selected as the national language can sometimes lead to internal and ethnic conflicts.

Q. Write a detailed note on Code Switching

There is a widespread impression that bilingual speaker's code-switch because they cannot express themselves adequately in one language. This may be true to some extent when a bilingual is momentarily lost for words in one of his or her languages. However, code-switching is an extremely common practice among bilinguals and takes many forms. It has been demonstrated that codes witching involves skilled manipulation of overlapping sections of two (or more) grammars. Some suggest that code-switching is itself a discrete mode of speaking, emanating from a single code switching grammar. One important aspect of the code-switching grammar is that the two languages involved do not play the same role in sentence making.

Typically one language sets the grammatical framework, with the other providing certain items to fit into the framework. Code-switching; therefore, is not a simple combination of two sets of grammatical rules but grammatical integration of one language in another.

Q. History of bilingual education

Language is never static but changes over time. Pidginsation is an example in this regard which is developed for the purpose of minimal communication between individuals/ groups speaking mutually unintelligible vernaculars. In the pidginisation process, limited and simplified linguistic forms are developed. As the need for communication or function increases in the society, new forms are created by the speakers. Gradually these new forms serve extended functions until pidgin evolves into a creole (form) as it becomes the mother tongue of the next generation, and thereby serves new functions. The forms of language undergo constant changes due to social changes, emergence of new technologies and contact with other languages. New forms apply to old functions, as when a new expression is used by teenagers; in the same way old forms apply to new functions, as for example; the English word save in using a computer; or new forms can be developed for new functions (e.g. new terminology).

Q. Norway independent situation and importance of local folk culture.

In Norway, local independence and distinctness of folk culture are highly valued, the dialect enjoys great prestige. A person's native speech is regarded as an integral part of his family background, a sign of his local identity. By identifying himself as a dialect speaker both at home and abroad, a member symbolizes pride in his community and in the distinctness of its contribution to society at large. Formal education, however, is always carried on in the standard language, the language of official transactions, religion, and the mass media. Norwegian law sanctions two standard languages. In everyday interaction, a specific community may select among the two as the situation demands. Members view this alternation as a shift between two distinct entities, which are never mixed. A person speaks either one or the other. The meaning attached to local descent and dialect use— being part of the "local team"—is clearly seen when we consider those members of the community who dissociate themselves from this "team." Traditionally, in northern Norway the local community of equals was separated from the landowning commercial and administrative elite by a wide gulf of social and judicial inequality. Since the latter were the introducers and users of standard Norwegian, the standard form was— and to some extent still is—associated with this inequality of status. Many of the functions of the former elite have now been

incorporated into the local social system. Individuals who fill these functions, however, continue to be largely of nonlocal descent. Although they may pay lip service to locally accepted rules of etiquette and use the dialect on occasion. Since the different social meanings which attach to the dialect are regular and persistent, they must in some way be reinforced by the pattern of social ties.

Q. Common point enlist bilingualism in society

Sociolinguists have shown how monolingual behavior varies according to a number of parameters such as, e.g. role relation, relative status of speakers and languages, topics, domains, etc. which apply to language-contact situations and that the state of bilinguality interacts with these. The bilingual community is either composed of two groups speaking two different languages as their mother tongue along with a small number of bilinguals speaking both languages, or a small number of both groups speaking a third common language, used as a lingua franca; or, as in the case of an language, exogenous some members of the community speak a second language that has no or few native speakers in the community. Any of these languages may be an official language of the community. Every bilingual community is situated between the two poles of a continuum, ranging from a set made up of two unilingual groups each containing a small number of bilinguals to a single group with a more or less large number of members using a second language for specific purposes.

Q. Five characteristics of creole??

Creoles are said to be lexically and structurally complex, and are learned as first languages.

Michel De Graff (1999) has argued against what he calls “creole exceptionalism,” that is, the idea that because creoles had no time to incorporate the parent-languages’ complex grammars, and because they are so new, creoles are similar to each other and different from other languages. In fact, if you compare the evolution and structures of English with that of Creoles, De Graff argues, there is no way to distinguish one from the other. In this reconstituted view, a creole may just be the partial settling of language practices under certain social circumstances. The languaging of creole speakers takes different features from their entire linguistic repertoire. They often move closer to the standard speaking

what linguists refer to as an acrolect. Other times, their languaging has more features of the creole itself, leading linguists to refer to this variety as a basilect. The choice of words to describe this languaging positions the acrolect as superior to the basilect but viewed from the perspective of the speaker, and not from the language itself, creole-speakers choose and blend features from their entire linguistic repertoire, making their languaging more responsive to standard or creole features depending on their communicative intent and its function.

Q. Influence language behaviour?

- Motivation. \
- Support at Home.
- Prior Linguistic Knowledge. ...
- Learning Environment. ...
- Teaching Strategies. ... ▪ Age.

Q. measurements of bilingualism

The most frequently used technique for measuring the various dimensions of bilinguality consists in taking measures in each of the bilingual's two languages and comparing them. However, a direct comparison between measures in two languages is extremely difficult even when it is possible because we need a clear definition of what a native speaker's competence in that language is, which is very difficult to operationalize. Monolingual Competence At times monolingual competences of a bilingual speaker are compared with monolingual standards in each language. This comparative approach is the only valid one when bilinguality is measured on the 'additive— subtractive' dimension. Here a comparison is made between cognitive measures obtained for bilinguals and monolinguals.

Q. Development in grammatical issues in code mixing

The fact that bilingual children mix elements from their two languages is often interpreted as evidence for a unitary underlying language system. Fred Genesee's article examines the empirical basis for such a claim. He points out the serious methodological problems of some of the studies, and re-analyses selected case studies. He also offers new data from speech perception studies, arguing that young bilingual children are able to differentiate two languages from the earliest

stages of bilingual development and that they can use their two languages in contextually sensitive ways. He points out that code-mixing itself is not good evidence for the unitary system argument. In fact, children's mixing may be related to mixed input by parents. Genesee calls for more serious research on the possible role of parental input in the form of mixed utterances. Jü rgen M. Meisel addresses the 'one system or two' question by focusing on the syntactic and morphological development of bilingual children however, instead of simply providing further evidence in support of the separate development argument, Meisel raises the theoretically more interesting question of whether the human language making capacity could allow the bilingual individual to separate the two simultaneously acquired grammatical systems from early on, without going through a phase of confusion.

Bilingualism

refers to the state of a linguistic community in which two languages are in contact with the result that two codes can be used in the same interaction and that a number of individuals are bilingual (societal bilingualism). It also includes the concept of bilinguality.

Bilinguality

is the psychological state of an individual who has access to more than one linguistic code as a means of social communication. The degree of access will vary along with a number of dimensions which are psychological, cognitive, psycholinguistic, social psychological, social, sociological, sociolinguistic, sociocultural and linguistic.

Q. Institutional context with reference to bilingualism?

Institutional contexts or socio-ecological co-occurrences attempt major clusters of interaction situations that occur in particular multilingual settings. Domains such as these help us understand that language choice and topic, appropriate though they may be for analyses of individual behaviour at the level of face-to-face verbal encounters, are related to widespread socio-cultural norms and expectations.

Q. How valuation linguistic work in Pakistani school?

Many bilingual education programs blend language-separation arrangements with flexible convergence types. Although some subjects are taught through one or the other language, a part of the curriculum is reserved for bringing the two or more languages together for contrastive analysis. Here, vocabulary, structures, and discourse patterns are contrasted. At other times, there is an instructional space for bilingual children to do cross-linguistic work which allows them to translanguage, using both languages flexibly, in much the same way as experienced bilingual authors, and bilingual communities, often do. For example, much attention is paid to how bilingual literary authors use crosslinguistic strategies for different effects, as the students' abilities to reproduce these in writing are expanded. Other times, actual languaging of bilingual communities is critically examined, as children reflect on this cross-linguistic use and its purpose and effect.

Q. how many languages are in Africa

In Africa, a university's efforts to integrate students and include non-Afrikaans-speaking students rest on delivering the curriculum in a bilingual mode in the power point, with Afrikaans and English co-present. Having both languages present on the screen, each in a different color, enables the inclusion of all students while reserving room for Afrikaans, the language traditionally used in the university. Especially at the secondary and tertiary level, co-languaging is becoming a familiar curricular language arrangement when the content has to be delivered to different language groups simultaneously

Q. Unitary system

Language mixing during the early stages of bilingual development has been interpreted in general terms as evidence of a unitary-language system with undifferentiated phonological, lexical and syntactic subsystems. This would mean that 'Words from the two languages did not belong to two different speech systems but to one…' (In Hatch, 1978:27). Swain (1977) postulated a 'common storage model' of bilingual development according to which all rules of both languages are initially stored in a common location and subsequently tagged as appropriate for a particular language through a process of differentiation. The title of Swain's (1972) thesis—Bilingualism as a first language —exemplifies the

unitary-system interpretation of early bilingual development. However, the evidence cited by the respective investigators may not sufficient to support such an interpretation. In order to uphold the unitary-system hypothesis one would need to establish that, all things being equal, bilingual children use items from both languages indiscriminately in all contexts of communication, which does not quite happen. Children from very young age are sensitive to the context, who they are speaking to and choose languages accordingly

Q. Five characteristics of pidgin

1. Languages in contact situation-example of how people language
2. Structurally simple
3. No mutual intelligibility
4. Always learned as second language
5. When nativised and standardized they become creoles
