EDU406 – Mid Term Past Papers File by Tanveer Online Academy

(Subjective)

Name the Core Critical Thinking Skills?

Answer:

Core Critical Thinking Skills

1. Analysis
2. Inference
3. Explanation
4. Interpretation
5. Self-regulation
6. Evaluation
7. Interpretation

How dialogic reflection is differing from critical reflection?

Answer:

Dialogic reflection: it refers to a less intensive process than critical reflection. It involves a self-discourse with the teacher. It's an attempt to explore an event internally. It involves considering the judgments and decisions that the teacher has made during their teaching.

Critical reflection: This refers to efforts from a much broader perspective, thinking about historical even political perspectives on the problems which are being encountered. This is been described by Boyd and Fales (1983) as "the core difference between whether a person repeats the same experience several times becoming highly proficient in one behavior, or learns from experience in such a way to be cognitively and affectively changed".

Therefore, critical reflection facilitates transformational learning in a way that dialogic reflection does not and transformational learning can happen gradually, slowly over a period of time or it can happen quite suddenly based on some critical situation in the classroom.

Promoting PR through Inductive Action Planning?

Answer:

Promoting PR through Inductive Action Planning

- As a teacher you will be learning every day.
- Knowing what you have learned or what you want to learn from practice and experience needs some planning
- This will be helped by **inductive action planning**.

Write five critical questions for Modelling reflection with students?

Answer:

- 1- **Was this activity successful while why not?** That's a very basic question. It's a good starting point for the teacher.
- 2- **The second question if we do this again what can I do differently to help you learn more?** This praises the teacher's reflection from the student's perspective rather than their perspective.
- 3- **Did this activity help you learn more than others we have done and Why?** **This** gets you to understand the student's perspective on their experience of the methodologies that you use.
- 4- **Are the relationships that I have with my students helping or hindering their ability to learn?** This will get you to think about your day-to-day interactions with students. How you're talking to them and how they're talking to you.
- 5- **Could the problems I have in my classroom be solved by pre-teaching my expectations or developing rules and procedures to deal with these issues?** This will get you to think about the problems the issues that you may be experiencing from a very pragmatic point of view.

Write the name of FIVE Critical Models.

Answer:

- Critical Model 1: Brookfield's Critical Lenses
- Critical Model 2: John Model for Structured Reflection (2000)
- Critical Model 3: Rolfe, Freshwater and Jasper (2001) – The "What Model"
- Critical Model 4: Rodgers (2002)
- Critical Model 5: Gore and Zeichner (1991)

Why factual data is used in conceptual learning?

Answer:

Factual data is used in conceptual learning to provide a foundation of concrete knowledge, making abstract ideas easier to understand. It helps learners build connections between theory and real-world applications, enhancing comprehension and retention. By anchoring concepts in facts, learners can critically analyze and apply these ideas effectively.

Types of Critical Lenses in Brookfield Model?

Answer:

- **Self-lens** (our own viewpoint)
- **The student lens** (the viewpoint of the students)
- **The peer's lens** (in other words, the viewpoint of our colleagues)
- **The theory lens** (which is why it's called the four lens approach.)

Gibbs Model?

Answer:

Gibb's Model helps the Reflective Practitioner develop the type of thinking associated with deep thought; reflection which is aimed at achieving better understanding. It provides a process for the reflective practitioner to engage in very deep thinking, critical thinking about their practice.

Principles of Reflective Practice?

Answer:

Principles of RP

1. **RP is problem-oriented** or in other words problem-posing or problem-solving.
2. **RP is based on action research.** Action research is a very powerful tool for change and improvement based on a cyclical process of thinking, planning and doing.
3. **RP ensures that teaching and learning are research-led**
4. **RP is data driven.** This means that there is ownership by the teacher of the data which is central to the teacher professional development.

Roles of teacher in the classroom?

Answer:

In the classroom, a teacher acts as:

- Facilitator: Guides learning and encourages exploration.
- Mentor: Supports personal and academic growth.
- Role Model: Demonstrates positive behaviours.
- Organizer: Manages the classroom environment.
- Evaluator: Assesses progress and gives feedback.

Importance of critical thinking?

Answer:

Critical thinking is essential as it enables individuals to analyze information objectively, make informed decisions, and solve problems effectively. It fosters independence, enhances creativity, and promotes open-mindedness, allowing people to navigate complex issues, avoid biases, and develop well-reasoned conclusions. Critical thinking is foundational for personal growth, effective communication, and success in both academic and professional settings.

Types of Frames?

Answer:

There are two main kinds of frames:

- Rhetorical Frames, and
- Action Frames

— Rhetorical frames are related with espoused beliefs, and are used for arguing about a situation.

— Action frames are related to policies in use. They are used for dealing with the situation.

Definition of Reframing?

Answer:

Reframing refers to the process of looking at a situation, problem, or belief from a new perspective to gain a different understanding. This technique helps challenge assumptions, uncover alternative solutions, and broaden one's viewpoint, leading to more effective problem-solving and deeper insights.

Write the significant phases of the process of Concept formation?

Answer:

The process of concept formation has three significant phases:

- Perception
- Abstraction
- Generalization

Reflection in action and Reflection on action?

Answer:

Reflection-in-action: Occurs during the activity, where the individual thinks on their feet, adjusting and making changes in real-time based on what's happening. It's an immediate, adaptive response to challenges.

Reflection-on-action: Happens after the activity, where the individual reviews and analyzes what occurred, identifying strengths, weaknesses, and areas for improvement. This reflection aids in planning better strategies for future situations.

Personal Practice Theory (PPT)?

Answer:

PPT is the systematic set of beliefs (theories) guiding teachers' practices (practical) that are based on their prior life experiences (personal).

Benefits of Greenway 3 Stage Model?

Answer:

Benefits of Greenaway's 3-Stage Model:

- One benefit is it is a very simple easy-to-apply model.
- Because it is focused entirely on the action. It is grounded in the teacher's everyday experience and that gives it a lot of value and gives it a lot of meaning for the teacher.
- It is a very simple model it's also very quick to do. It's not at all time-consuming and especially for the beginning teacher. It has a lot of benefits over more complex models. Because it is much easier to understand and apply.
- And what we are looking at with this model. Therefore, is something which can be practiced in schools very quickly and easily.

Write critical question that teachers can ask themselves reflecting on their teaching?

Answer:

Here are some critical questions teachers can use for self-reflection on their teaching:

- Did my lesson effectively engage all students, and if not, why?
- How well did I address the diverse learning needs within my classroom?
- Were my teaching objectives clear, and did students achieve them?
- What strategies worked well, and what could I improve next time?
- How did I respond to unexpected challenges during the lesson?

Discuss the certain challenges that we can face as reflective practitioners?

Answer:

- We can have expectations that are unrealistic or in a way misplaced in terms of what we expect from ourselves and colleagues and from the students that we work with.
- Another challenge is that early on in our training we can develop our notions about what education is about, about teaching and learning as a whole. These notions can begin to interfere with our work in the classroom if we are not being flexible and adaptable enough.

- There can be misconceptions or misunderstandings and from what we have learned from theory when we are confronted by the reality of work in the classroom.
- There can also of course be personal preferences which can become a challenge in other words the way we like our classroom to look the way we like students to behave may not be what we experience and of course.
- There are also things like personal egotism and pride which can get in the way of being a reflective practitioner. These can actually become barriers to development.

Example for critical incident?

Answer:

A critical incident in teaching is a significant event that prompts reflection and may lead to changes in practice. Here's an example:

During a class discussion, a teacher notices that only a few students are participating, while others seem disengaged. When one quieter student attempts to answer, they're interrupted by a more vocal peer. The teacher realizes that the classroom environment may unintentionally favor outspoken students, leaving others overlooked. Reflecting on this, the teacher decides to implement strategies, like structured turn-taking or smaller group discussions, to ensure all voices are heard and foster a more inclusive learning environment.

Explain advantages of good reflective speaking and writing?

Answer:

Good reflective speaking and writing offer several advantages:

Enhanced Self-Awareness: They allow individuals to explore their thoughts, feelings, and actions, leading to a better understanding of personal strengths and areas for growth.

Improved Problem-Solving: Reflecting on experiences helps identify patterns and solutions, making it easier to tackle similar challenges in the future.

Clearer Communication: Articulating reflections improves clarity in expressing ideas, enhancing both verbal and written communication skills.

Emotional Intelligence: Reflective practices foster empathy, self-regulation, and resilience by encouraging introspection and emotional understanding.

Continuous Learning: Reflective speaking and writing reinforce a mindset of lifelong learning, helping individuals adapt and improve in their personal and professional lives.

Explain the values of effective teacher?

Answer:

Effective teachers embody values such as compassion, fostering a supportive and nurturing learning environment. They demonstrate integrity, maintaining honesty and fairness in their interactions with students. Additionally, they exhibit commitment to continuous improvement, engaging in lifelong learning to enhance their teaching practices and student outcomes.

Principal of the critical thinking?

Answer:

The principles of critical thinking include:

Clarity: Ensuring that ideas and arguments are expressed clearly to facilitate understanding.

Accuracy: Seeking truthful information and verifying facts before drawing conclusions.

Relevance: Focusing on information and arguments that directly relate to the issue at hand.

Depth: Examining the complexities of a situation and considering multiple perspectives.

Breadth: Exploring various viewpoints and recognizing the broader context of an issue.

Logic: Structuring reasoning in a coherent manner, ensuring that conclusions follow from the premises.

Fairness: Considering all viewpoints without bias, promoting an equitable evaluation of arguments.

Difference between framing and reframing matrix?

Answer:

Framing

Framing involves presenting or interpreting a situation, problem, or idea in a specific way to shape how it is understood. It sets the context for understanding an issue, highlighting certain aspects while potentially omitting others. For instance, a teacher might frame a lesson to emphasize particular learning outcomes, guiding students to focus on specific content and shaping their perceptions accordingly.

Reframing

Reframing is the process of changing the perspective or context in which a situation or problem is viewed, allowing for new interpretations and solutions. It helps challenge existing assumptions and explore alternatives. For example, a teacher might reframe a student's disruptive behavior as a signal of unmet needs, leading to more constructive interventions and a focus on resilience and improvement.

Write any 3 principals of RP?

Answer:

Here are three principles of Reflective Practice (RP):

Critical Reflection: This principle emphasizes the importance of critically examining one's experiences, beliefs, and practices to gain deeper insights. It encourages individuals to question their assumptions and the effectiveness of their actions, fostering continuous learning and improvement.

Continuous Learning: Reflective Practice promotes the idea that learning is an ongoing process. By consistently reflecting on experiences, educators and professionals can adapt their methods, enhance their skills, and stay responsive to changing circumstances in their field.

Collaboration and Dialogue: Engaging in reflective practice often involves sharing experiences and insights with peers. Collaborative reflection allows for diverse perspectives, enriching the learning process and providing support as individuals navigate challenges in their practice.

Write 5 benefits of reflective practice for teachers over reflective practitioners?

Answer:

Here are five concise benefits of reflective practice for teachers:

Enhanced Teaching Effectiveness: Critically analysing their methods leads to improved lesson planning and student engagement.

Professional Growth: Encourages continuous learning and helps teachers stay updated with educational trends.

Improved Student Outcomes: Identifying areas for adjustment leads to better student understanding and achievement.

Greater Awareness of Student Needs: Helps teachers tailor instruction to diverse learning styles and individual needs.

Increased Confidence and Autonomy: Reflection enhances teachers' confidence in decision-making and fosters greater independence in their roles.

Attributes for Teachers to Become Critical Thinkers?

Answer:

- Be open-minded to new ideas
- Know that people have different ideas about the meaning of words.
- Separate emotional and logical thinking.
- Question things that don't make sense.
- Avoid common mistakes in your own reasoning.
- Don't argue about something that you know nothing about.

- Build a string vocabulary to better share and understand ideas.
- Know when you need more information.
- Know the difference between conclusions that could/must be true

Role of teachers in constructing the concept.

Answer:

Teachers play a crucial role in constructing concepts through the following ways:

Facilitating Understanding: Teachers introduce new concepts by breaking them down into manageable parts and using relatable examples, helping students grasp complex ideas.

Encouraging Inquiry: By fostering a questioning environment, teachers stimulate curiosity, prompting students to explore and investigate concepts deeply, leading to better comprehension.

Connecting Ideas: Teachers help students link new concepts to prior knowledge, promoting meaningful learning and making abstract ideas more tangible.

Providing Feedback: Offering constructive feedback allows teachers to guide students' thought processes, helping them refine their understanding and correct misconceptions.

Creating Collaborative Learning Opportunities: By encouraging group discussions and collaborative projects, teachers facilitate peer-to-peer learning, allowing students to construct concepts collectively through shared insights and perspectives.

Explain any 2 quadrants of Jo Hari window model?

Answer:

In the Jo-Hari Window there are four quadrants. The top left quadrant is called the **Open Area (Quadrant 1)**. This area represents for the reflective practitioner the things that you know about yourself and the things the other people know about you as well. This includes things like your behaviour, your knowledge, the skills that you have, and the attitudes that you have as a professional in a way it is almost like your public history.

The next quadrant area 2 is known as **Blind Area**. This area represents the things that you are not aware of but are known by others in a way this is like being unconsciously incompetent. And this can involve simple information that you do not know or it could be even deeper issues that you do not know about yourself but other people do know.

The third quadrant is known as the **Hidden Area**. It is hidden because it represents the things that you know about yourself but the others do not know. This is the private, closed-off area that you keep secret to yourself and the others do not know.

The fourth quadrant is known as the **Unknown Area**. This area represents all those things that are unknown to you and which also unknown to other people.

Explain process of learning from unconscious Incompetence to unconscious competence.

Answer:

The process of learning from unconscious incompetence to unconscious competence involves four stages, often referred to as the Four Stages of Competence:

Unconscious Incompetence: In this initial stage, individuals are unaware of their lack of knowledge or skill in a particular area. They may not recognize that there is something they need to learn or improve upon.

Conscious Incompetence: Once individuals are exposed to new information or experiences, they become aware of their deficiencies. In this stage, they recognize what they do not know or cannot do, which motivates them to learn and improve.

Conscious Competence: As individuals begin to acquire new skills and knowledge, they can perform tasks but must consciously think about what they are doing. They may still require focus and effort to execute the skill correctly, indicating that practice is needed to gain proficiency.

Unconscious Competence: In the final stage, individuals have mastered the skill to the point where it becomes second nature. They can perform the task effortlessly without conscious thought, often leading to improved efficiency and confidence.

2. Conscious Incompetence (Awareness of the existence and relevance of the skill)	3. Conscious Competence (Can perform a skill at will)
1. Unconscious Incompetence (not aware of the skill (and lack of skills) and its relevance)	4. Unconscious Competence (the skill is so practiced that it becomes second nature)

Write 3 stages of Reflective Writing?

Answer:

There are three stages to reflective writing:

- Description
- Interpret
- Outcome

Write the 5 stages of Dewey Model?

Answer:

Dewey's 5 Stage Model:

So, let's look at the model the five-stage model.

- First of all, he says that what the teacher does is to **identify a problem** something which is vexing, perplexing to them, and needs to be fixed.
- From then the next step is to observe and **refine the identified problem** to clarify the understanding of the model.
- Beyond that the third step of the 5-stage model is for the teacher to develop a hypothesis to explain the problem, or to try and understand it from a technical point of view. Also, as its origins and possible solutions.
- And this must lead to deeper scrutiny of that problem.
- **Test the hypothesis or** a deeper understanding before leading into some sort of action. **Dewey, J. (1938) Logic: The Theory of Inquiry. Troy, MN: Rinehart & Winston**

Levels of reflection used in teaching?

Answer:

- Repair
Review
- Research
- Re-theorising
- Reformulating

Reflection Process?

Answer:

Describe the term pedagogical thinkers in view of Laboskey.

Answer:

Pedagogical Thinkers

- “Pedagogical thinkers” are more conscious of their actions, asking the questions ‘what is my intuitive response to this, and why am I feeling or acting this way? Laboskey suggests that it is by taking conscious control that pedagogical thinkers ‘take a long-term view of how to solve problems ... remaining open to learning ... recognize there are no simple answers and the conclusions they reach are likely to be tentative’. (Laboskey in Cartwright, 2011).

Explain conscious competence model of learning?

Answer:

The Conscious Competence Model

2. Conscious Incompetence (Awareness of the existence and relevance of the skill)	3. Conscious Competence (Can perform a skill at will)
1. Unconscious Incompetence (not aware of the skill (and lack of skills) and its relevance)	4. Unconscious Competence (the skill is so practiced that it becomes second nature)

We can see that the **conscious competence model has four quadrants**. The first quadrant is **unconscious in competence**. This is where the reflective practitioner is unconscious of what they do not know.

The second quadrant is **conscious in competence**. This is the reflective practitioner growing in awareness of what they do not know.

The third quadrant is **conscious competence**. This is where the reflective practitioner becomes more aware of the skills that they do have.

And finally, the fourth quadrant is **unconscious competence**. This is where reflective practice seems very easy where the teacher (the reflective practitioner) is unaware of what they do know. So, we can see that this model demonstrates how a teacher how a reflective practitioner moves through different levels of knowing.

Mention 5 benefit of reflective practice?

Answer:

The benefits of reflective practice

Most importantly, reflection helps us as teachers to develop our own learning and provides a teaching framework. Stephen Brookfield (1995) explained this and proposed the following framework. According to him, reflective practice

- Allows us to consciously develop our own repertoire of strategies and techniques in the classroom. We can draw upon our teaching and use this in the context and discipline of teaching.
- Helps us to take informed decisions in the classroom to take the actions which are meaningful and justified and be able to explain these to others.
- Helps us to adjust our teaching, respond to problems and issues which we have faced as teachers in the classroom. For example, rather than just reacting to a poor evaluation, we

investigate and try to understand the underlying reasons for a poor evaluation and use this to take appropriate action.

- Helps us to become aware of the underlying beliefs and assumptions that we have as teachers about teaching and learning and as a consequence we can try to understand what we do and why we do.
- Helps to promote a positive learning environment. Through reflection, our teaching becomes much more responsive to the students and their feedback and through this we get good quality learning.
- Helps us to locate our teaching in the broader institutional and even social context in which teaching and learning takes place.

Enlist 5 component of Meta- competence with reference to provisional model?

Answer:

Metta competence

- **Communication**
- **Self-development**
- **Creativity**
- **Analysis**
- **Problem solving**

Components of Kolb's Model Applied to RP.

Answer:

- Concrete Experience
- Reflective Observation
- Abstract Conceptualization
- Active Experimentation

Halpern's Framework?

Answer:

Halpern proposes a framework based on different kinds of critical thinking:

- Thinking and language
- Argument analysis
- Hypothesis testing

Kolb's Reflective Cycle?

Answer:

Another very important model of reflective practice is Kolb's reflective cycle where active experimentation leads to a transfer of learning from the current cycle to a new cycle. It is a very popular model you probably already know about it. What Kolb is talking about is a cycle that is based on experience entirely. In terms of this model, there are four main components. And there is a diagram to illustrate this.

Why is reflective practice necessary for a teacher?

Answer:

Reflective practice is essential for teachers because it encourages continuous improvement, allowing them to assess and refine their teaching methods. By reflecting on their experiences, teachers can identify what works well and what doesn't, helping them adapt to meet the diverse needs of their students. This practice fosters self-awareness, deepens understanding, and enhances professional growth, ultimately leading to better learning outcomes. Reflective

practice also helps teachers stay engaged, responsive, and committed to delivering effective, student-centered education.

Professional competence broad categories names?

Answer:

Professional competence can be categorized into three broad headings;

- Professional values and practice
- Professional knowledge and understanding
- Professional skills and application

Inductive action planning?

Answer:

Inductive action planning is therefore about:

- Identifying opportunities for you to discuss, reinforce and develop your practice.
- Helping you decide what information/data of your planning and practice you can use as evidence of your development.
