

Psy406 (Educational Psychology)

Final Term Questions Answers

Q1: What is Self-Control?

Answer:

Self-control is the ability of a learner to **regulate thoughts, emotions, and actions** to achieve long-term goals.

In educational settings, self-control helps students:

- **Resist distractions**
- **Delay gratification**
- Stay **motivated and focused** on learning tasks

It is crucial for **academic success and discipline**.

Q2: What is Overlearning?

Answer:

Overlearning occurs when a student **continues to study or practice material even after mastering it**.

Benefits of overlearning:

- Increases **retention and recall**
- Strengthens **memory**
- Helps in **stressful exam situations** by reinforcing confidence

Q3: Three Strategies for Preparing a Test

Answer:

1. **Define Clear Learning Objectives:**
 - Ensure test content matches what was taught.
2. **Use a Variety of Question Types:**
 - Include **MCQs, short answers, and long questions** to assess different levels of understanding.
3. **Pilot Testing or Review:**
 - Review the test to remove any errors and ensure clarity and fairness.

These strategies help ensure the test is **valid, reliable, and aligned** with educational goals.

Q4: Difference Between Front Benchers and Back Benchers

Answer:

Front Benchers

Sit near the teacher

Usually more **attentive and interactive**

Ask questions and participate

Tend to have **better academic performance**

Back Benchers

Sit far from the teacher

May be **less involved** in class

Often silent or distracted

Performance may vary based on motivation

However, behavior depends on **individual learning styles**, not just seating.

Q5: Constructive Learning and Teaching

Answer:

Constructive learning is based on the idea that learners **actively construct knowledge** through experience rather than passively receiving it.

Key points:

- Encourages **problem-solving, discussion, and critical thinking**
- Teachers act as **facilitators**, not just knowledge providers
- Students use **prior knowledge** to understand new concepts
- Supports **collaborative and student-centered** learning environments

Example: Group projects, case studies, and inquiry-based learning.

Q6: What is Short-Term Memory (STM)?

Answer:

Short-term memory is the part of memory that temporarily holds a **limited amount of information** for a **brief period**, typically **15–30 seconds**.

- It can store about **7±2 items**
- Information must be rehearsed to transfer to **long-term memory**
- Crucial for **learning, problem-solving, and classroom tasks**

Q7: What is the Role of Seatwork and Homework?

Answer:

- **Seatwork** refers to tasks given during class to reinforce learning.
- **Homework** is assigned to be completed outside school hours.

Both aim to:

- Reinforce **independent learning**

- Allow **practice and application** of skills
- Encourage **self-discipline** and **time management**

Q8: What Are Z-Score and T-Score?

Answer:

Z-Score	T-Score
Tells how many standard deviations a value is from the mean	A converted score with a mean of 50 and SD of 10
Formula: $(X - \text{Mean}) / \text{SD}$	Derived from Z-score: $T = 10Z + 50$
Can be negative or positive	Always a positive whole number

Both are used to **standardize test results** and compare student performance.

Q9: MCQ – Ahmad watched a movie where a boy got punished for cheating, and he avoided cheating afterward. What theory does this represent?

Correct Concept: Vicarious Conditioning (Observational Learning)

Explanation:

This scenario illustrates **Bandura's Social Learning Theory**, specifically **vicarious punishment**.

- Ahmad learned by **observing consequences** faced by others (not by experiencing them).
- He adjusted his behavior based on **observational learning**.

✓ This is **NOT** classical or operant conditioning directly — it's vicarious learning.

Q10: MCQ – A question related to test

(While exact question not remembered, here's a common concept that may apply)

Example Concept: Validity

Explanation:

A test is **valid** if it measures what it is intended to measure.

Types include:

- **Content validity** – Does the test cover the syllabus?
- **Construct validity** – Does it measure the psychological trait?
- **Criterion validity** – Does it predict future performance?

Q11: What Are the Factors Involved in Self-Regulation?

Answer:

Self-regulation in learning involves managing one's **thoughts, emotions, and behaviors** to reach academic goals. Key factors:

1. **Goal Setting** – Clear academic targets
2. **Self-Monitoring** – Tracking own progress
3. **Self-Motivation** – Staying internally driven
4. **Self-Instruction** – Talking oneself through tasks
5. **Self-Reinforcement** – Rewarding personal effort

Q12: Meaning-Based Teaching vs. Sound-Based Teaching

Answer:

Meaning-Based Teaching

Focuses on **understanding** words and ideas
Encourages **reading for meaning**
Useful for **comprehension & vocabulary**

Sound-Based Teaching

Focuses on **phonetics** and how words sound
Encourages **correct pronunciation**
Useful for **early reading and spelling**

Teachers may **combine both** to improve reading fluency and comprehension.

Q13: Difference Between Front Benchers and Back Benchers

(Already answered above in Q4, but repeated briefly)

Front Benchers

More engaged, active in learning
Tend to perform better

Back Benchers

Less interactive, may feel isolated
Performance varies by motivation

But both can perform well with **right motivation and teaching methods**.

Q14: Bandura's Concept of Modeling

Answer:

According to **Albert Bandura**, modeling is a part of **observational learning**, where people learn by **watching others**.

Steps in modeling:

1. **Attention**
2. **Retention**
3. **Reproduction**
4. **Motivation**

Example: A student copies the **punctual behavior** of a respected teacher.

Q15: Difference Between Z-Score and T-Score

(Already answered in Q8 above; this version is concise)

- **Z-Score:** Tells how far a score is from the mean in SD units
- **T-Score:** A standardized version of Z-score with a **mean of 50** and **SD of 10**

Both help in comparing individual scores with group performance.

Q16: How Can You Become an Effective Teacher?

Answer:

To become an effective teacher:

- Understand **student needs and learning styles**
- Use **clear communication** and engaging methods
- Apply **classroom management techniques**
- Provide **timely feedback and motivation**
- Encourage **critical thinking and creativity**

Most importantly, create a **supportive learning environment**.

Q17: What Do You Know About Script in Educational Psychology?

Answer:

A **script** is a mental structure that guides a person's **expectations** in a situation based on **prior experiences**.

In classroom context:

- A student develops a “script” for how a **class, test, or group activity** usually works.
- Scripts help in **predicting, organizing, and responding** to familiar academic settings.

Q18: What Behavior Did You Learn from a Teacher?

Answer (example-based):

I learned **time management and discipline** from my teacher.

- She always began and ended class on time
- Encouraged us to meet deadlines
- Her organized way of teaching influenced my study habits positively

Q19: MCQ – Bandura’s Theory Example (Learning from Others)

Correct Answer: Observational learning / Modeling

Q20: MCQ – Example-Based Questions

Most were **real-life scenarios** like:

- A student avoiding bad behavior after seeing someone punished (Vicarious punishment)
- Teacher encouraging class participation (Reinforcement, Modeling)

Q21: Define Script

Answer:

A **script** in educational psychology is a mental framework or pattern that helps a person **understand and predict sequences of events** in a particular setting.

- Example: A student develops a classroom script such as: enter class → greet teacher → sit down → open book → follow instructions.
- Scripts guide **behavior, expectations, and responses** in learning situations.

Q22: What Good Qualities Did You Develop After Schooling?

Answer (Personal Reflection):

After school, I developed several positive qualities like:

- **Time management:** I learned to organize my daily tasks efficiently.
- **Self-discipline:** I became more responsible and goal-oriented.
- **Teamwork and communication:** Through group activities and class presentations.
- **Adaptability:** Adjusting to different learning environments and challenges.

These traits are essential for both personal and academic success.

Q23: What Is the Role of Feedback in Learning?

Answer:

Feedback is essential for improving a learner’s performance.

- It provides **information about strengths and areas for improvement**
- Can be **positive** (reinforcing) or **corrective** (guiding)
- Helps students **adjust strategies** and **stay motivated**

Effective feedback is timely, specific, and constructive.

Q24: What Does Self-Reflective Learning Mean?

Answer:

Self-reflective learning involves thinking about **how you learn**, what strategies work, and what changes are needed to improve.

It helps students:

- Become more **independent**
- **Evaluate their own progress**
- Set personal **learning goals**

Q25: Example-Based Subjective Question – Learning from a Teacher

Answer:

From my teacher, I learned **empathy and active listening**.

She respected students' views, allowed open discussion, and always encouraged self-expression — these qualities inspired me to become more **respectful and thoughtful** in my interactions.

Q26: Three Characteristics of a Good Goal

Answer:

1. **Specific:** The goal should clearly define what is to be achieved.
2. **Measurable:** It should be possible to track progress or success.
3. **Achievable:** The goal should be realistic and within the learner's capacity.

Good goals also promote **motivation, focus, and self-regulation** in students.

Q27: What Is Social Learning Theory?

Answer:

Social Learning Theory by **Albert Bandura** states that people learn behaviors through **observation, imitation, and modeling**.

Key elements:

- **Attention** to model behavior
- **Retention** of what is seen
- **Reproduction** of the behavior
- **Motivation** to imitate it

It explains how students learn not only from direct experience but by watching others.

Q28: Scenario – Aleena Shows Aggressive Emotions in Class. What Should a Psychologist Suggest to the Teacher?

Answer:

As a psychologist, I would suggest:

1. **Behavioral Observation:** Identify triggers for Aleena's aggression.
2. **Positive Reinforcement:** Encourage calm behavior through praise and rewards.
3. **Anger Management Techniques:** Teach Aleena to express emotions constructively.
4. **Classroom Structure:** Maintain a consistent and predictable environment.
5. **Parent Involvement:** Work with parents to reinforce behavior at home.
6. **Counseling Support:** Recommend individual or group sessions if needed.

Goal: Help Aleena develop **emotional regulation** and improve **peer interaction**.

Q29: Difference Between Declarative and Procedural Knowledge

Declarative Knowledge	Procedural Knowledge
"Knowing what" – facts, information	"Knowing how" – skills, procedures
Can be easily expressed in words	Hard to explain; shown through action
Example: Knowing the formula of area	Example: Actually solving math problems

Both are essential for academic success.

Q30: Difference Between Reliability and Validity

Reliability	Validity
Consistency of a test over time	Accuracy – does the test measure what it claims?
A reliable test gives the same results repeatedly	A valid test gives meaningful, accurate results
Example: Test scores remain stable	Example: A math test actually measures math, not reading

A test can be **reliable but not valid** if it consistently measures the wrong thing.

Q31: Humanistic Theory – Explain

Answer:

Humanistic theory in education emphasizes the **whole person**, including **feelings, free will, and self-actualization**.

Key ideas:

- Focus on **student-centered learning**
- Respect for the learner's **individuality and growth**
- Emphasizes **motivation, creativity, and emotional well-being**
- **Maslow's Hierarchy of Needs** and **Carl Rogers' self-concept** are important models

Goal: Help students reach their **full potential** in a **positive, nurturing environment**.

Q32: What Is Short-Term Memory? *(Repeated from Q6, rewritten briefly)*

Answer:

Short-term memory is the ability to hold a small amount of information (about **7±2 items**) for a short time (15–30 seconds).

- It is essential for **learning tasks**, such as remembering instructions
- Rehearsal is needed to move info to **long-term memory**

Q33: Traditional Teaching Approach (Long Question)

Answer:

The **traditional teaching approach** is **teacher-centered** where students are passive receivers of knowledge.

Characteristics:

- Focus on **memorization and lectures**
- The teacher controls the **pace and content**
- Assessment is **exam-based**
- Learning is usually **individual**, not group-based
- Less focus on **critical thinking** and creativity

This method works well for structured content but may lack engagement and student autonomy.

Q34: Cognitive Teaching Approach (Long Question)

Answer:

The **cognitive approach** focuses on how students **process, store, and use information**.

Key Features:

- Students are **active participants** in learning
- Emphasizes **understanding, thinking, and reasoning**
- Uses strategies like **problem-solving, concept mapping, and scaffolding**
- Encourages **metacognition** (thinking about thinking)

It helps students to apply knowledge **meaningfully** in real-life situations.

Q35: Characteristics of a Good Goal *(Repeated from Q26, rewritten briefly)*

Answer:

1. **Specific** – Clearly states what is expected

2. **Achievable** – Realistic for the learner's ability
3. **Measurable** – Progress can be tracked
4. **Time-bound** – Set within a clear time frame
5. **Relevant** – Matches the learner's needs or objectives

Good goals boost **motivation and performance**.

Q36: What Is Backward Strategy?

Answer:

Backward strategy refers to **working backward** from the goal to identify the steps needed to achieve it.

In education:

- A teacher sets the **learning outcome first**
- Then plans lessons, materials, and assessments accordingly
- Ensures learning activities are **aligned with goals**

This approach improves **goal clarity** and **purposeful instruction**.

Q37: How Does Clear Presentation Help in Learning?

Answer:

Clear presentation helps students:

- Understand **objectives and expectations**
- Stay **focused and organized**
- Grasp **complex concepts easily**
- Retain information for **long-term learning**

Using visuals, examples, and step-by-step explanations supports better **comprehension**.

Q38: Aspects of Divergent Thinking

Answer:

1. **Fluency** – Generating many ideas
2. **Flexibility** – Switching perspectives or approaches
3. **Originality** – Producing unique ideas
4. **Elaboration** – Adding detail to ideas

Divergent thinking promotes **creativity and problem-solving** in learning.

Q39: Advice on Managing Emotions in Class (LQ – Conceptual Scenario

Answer:

To manage emotions in class, students and teachers should:

- **Identify emotional triggers**
- Practice **deep breathing or mindfulness**
- Encourage **open expression** in a respectful way
- Use **positive reinforcement**
- Provide **counseling** if emotional outbursts are frequent

Emotionally aware classrooms foster **healthy communication** and **better learning outcomes**.

Q40: Significance of Overlearning

Answer:

Overlearning means practicing beyond initial mastery.

Significance:

- Improves **long-term retention**
- Increases **speed and accuracy** of recall
- Helps in **stressful exam situations**
- Builds **confidence and fluency**

Especially useful in **memorization-based subjects** and skill learning.

Q41: Five Ways to Solve Conflict Between Teacher and Student (Long Question)

Answer:

1. **Open Communication:** Encourage respectful dialogue to understand each other's perspectives.
2. **Empathy:** Teachers should listen empathetically and validate students' feelings.
3. **Clear Expectations:** Define rules and behavior policies at the beginning.
4. **Positive Reinforcement:** Recognize good behavior to promote cooperation.
5. **Mediation or Counseling:** Involve a neutral third party if the conflict escalates.

A peaceful classroom fosters **better learning and respect**.

Q42: Metacognitive Approach in Motivation

Answer:

Metacognition means **thinking about one's own thinking**. In motivation, it helps students:

- **Monitor their motivation level** and adjust efforts accordingly
- Set personal goals and plan learning strategies
- Evaluate what motivates or distracts them

- Take **ownership of their learning** process

Result: More **independent, self-motivated, and strategic learners**.

Q43: How Does Response Set Create Hindrance in Transference?

Answer:

A **response set** is a mental bias that causes a learner to give **automatic or habitual responses** rather than adapting to new learning.

In transference:

- Learners may **incorrectly apply previous knowledge**
- It limits **flexibility** and causes **misunderstanding** of new material
- Example: Student repeats a solution from an old problem that doesn't apply to a new one

This blocks **effective application** of knowledge in new contexts.

Q44: What Is Emotional Intelligence?

Answer:

Emotional intelligence (EI) is the ability to:

- **Recognize, understand, and manage** one's own emotions
- Understand and influence the **emotions of others**
- Use emotions to enhance thinking and relationships

Students with high EI show **better social skills, academic performance, and mental well-being**.

Q45: How Does Willpower Play a Prominent Role in Self-Regulation?

Answer:

Willpower helps learners resist distractions and stay focused on long-term goals.

Role in self-regulation:

- Delays gratification (e.g., study now, enjoy later)
- Promotes **discipline and persistence**
- Supports **goal achievement** by resisting impulsive actions
- Essential during **challenging learning tasks**

It strengthens **motivation and self-control**.

Q46: Name Three Types of Subjective Tests

Answer:

1. **Essay Tests** – Require detailed written responses
2. **Short Answer Questions** – Brief, to-the-point responses
3. **Open-Ended Questions** – Allow multiple valid answers or reasoning

Subjective tests assess **depth of understanding and expression**.

Q47: You Are a Teacher of an Undisciplined Class – How Will You Manage Them?

Answer:

To manage an undisciplined class:

1. **Set Clear Rules:** Establish behavioral expectations from day one.
2. **Consistent Consequences:** Apply fair and consistent discipline for rule-breaking.
3. **Engage Students:** Use interactive and meaningful content to maintain interest.
4. **Positive Reinforcement:** Reward appropriate behavior to promote repetition.
5. **Build Relationships:** Gain student trust and respect through empathy and fairness.

Effective discipline creates a **respectful, learning-focused environment**.

Q48: A Teacher Says “95% of My Students Will Get A+.” What Type of Goal Is This?

Answer:

This is an **Unrealistic or Overambitious Goal**.

- It may not reflect **student diversity** in ability and motivation
- **Not measurable or achievable** for all
- May cause pressure or disappointment among students

SMART goals (Specific, Measurable, Achievable, Relevant, Time-bound) are better for academic planning.

Q49: One Student Has High Metacognition, the Other Has Low – Explain

Answer:

- A student with **high metacognition**:
 - Plans, monitors, and evaluates their learning
 - Uses strategies like summarizing, questioning, and reviewing
 - Adjusts approach when they struggle
- A student with **low metacognition**:
 - Struggles to understand what works for them
 - Is passive in learning and may repeat mistakes

- Lacks awareness of strengths or weaknesses

High metacognition leads to **better academic performance**.

Q50: Reliability vs. Validity (With Examples)

Reliability	Validity
Consistency of results	Accuracy of what the test measures
Example: Getting similar scores in repeated testing	Example: A math test measuring math skills, not reading ability

A test can be **reliable but not valid**. Both are essential for **effective assessment**.

Q51: What Is Jigsaw Law?

Answer:

Jigsaw teaching method involves dividing the class into groups where each member learns a **different part** of the topic and then teaches it to their group.

- Promotes **cooperation, accountability, and active learning**
- Helps build **communication and leadership** skills
- Ideal for **inclusive classrooms** where peer teaching is encouraged

It reduces competition and enhances **group harmony**.

Q52: Inductive vs. Deductive Reasoning

Inductive Reasoning	Deductive Reasoning
Moves from specific observations to general conclusions	Moves from general rules to specific conclusions
Example: Seeing many black crows → all crows are black	Example: All humans need oxygen → Ali needs oxygen

Inductive is **bottom-up**, deductive is **top-down** logic.

Q53: What Is First-Wave Constructivism?

Answer:

First-wave constructivism is based on **Piaget's theory**, which emphasizes **individual learning and self-discovery**.

- Learning is constructed **internally**
- Focuses on **cognitive development stages**
- Teachers act as **facilitators**, not information-givers

- Learners make meaning based on **personal experiences**

This wave views the learner as **active and self-motivated**.

Q54: What Is the Most Frequently Used Measure of Central Tendency?

Answer:

The **mean** (average) is the most commonly used measure of central tendency.

- Calculated by **adding all values and dividing by the number of items**
- Useful when data is **normally distributed**
- Can be influenced by **extreme values (outliers)**

Other measures: **Median and Mode**, but mean is used more often.

Q55: What Is Instructional Learning?

Answer:

Instructional learning occurs when a learner follows **explicit instructions** or rules from a teacher or authority figure.

- Based on **external guidance** rather than personal experience
- Involves **step-by-step learning**
- Common in school settings, where teachers guide learning activities

It ensures **structured knowledge delivery** and helps in **behavior shaping**.

Q56: Meaning-Based vs. Sound-Based Teaching – Which Is Better?

Answer:

Both have value, but **meaning-based teaching** is often more effective in the long run.

Meaning-Based

Focus on **understanding** and comprehension
Builds **reading comprehension**

Sound-Based

Focus on **phonetics and pronunciation**
Builds **word decoding skills**

Conclusion: A **balanced approach** works best, but meaning-based is better for **deep learning and language use**.

Q57: Define Emotional Intelligence

Answer:

Emotional Intelligence (EI) is the ability to:

- Recognize and manage **one's own emotions**

- Understand and respond to the **emotions of others**
- Handle **relationships, empathy, and self-regulation**

EI is crucial for **classroom success, leadership, and mental well-being.**

Q58: What Is "Withitness"? *(Long Question)*

Answer:

Withitness is a classroom management concept introduced by **Kounin**.

- It means the teacher is **aware of everything happening** in the classroom.
- The teacher can **detect misbehavior early**
- Ensures **students remain on-task**
- Prevents problems by **monitoring all areas** of the class

Withitness promotes **discipline, alertness, and effective learning.**

Q59: Difference Between Achievement and Aptitude Tests

Achievement Test	Aptitude Test
Measures what a student has learned	Measures a person's potential to learn
Based on school curriculum	Predicts future performance
Example: End-of-term exams	Example: IQ test or SAT

Both are used for **assessment**, but serve **different purposes.**

Q60: Five Ways to Improve Effective Learning

Answer:

1. **Use of Feedback:** Helps students correct errors
2. **Active Learning:** Encourage discussion, hands-on tasks
3. **Goal Setting:** Gives learners direction and motivation
4. **Variety of Methods:** Combine visuals, lectures, and activities
5. **Encourage Metacognition:** Help learners plan and reflect on their learning

These strategies boost **engagement and retention.**

Q61: What Is Social Learning Theory?

Answer:

Proposed by **Albert Bandura**, Social Learning Theory explains how people learn by **observing others.**

Key Processes:

1. **Attention**
2. **Retention**
3. **Reproduction**
4. **Motivation**

It shows how learning is influenced by **environment and modeling**, not just personal experience.

Q62: Define Self-Regulation. How Do You Rate Your Own Ability? (3 Marks)

Answer:

Self-regulation is the ability to control one's thoughts, emotions, and actions to achieve long-term goals.

Personally, I would rate my self-regulation ability as **moderate to strong**. I try to stay focused on goals, avoid distractions, and manage my emotions during stress, but there's still room for improvement in time management.

Q63: Explain Withitness (3 Marks)

Answer:

Withitness refers to a teacher's ability to be aware of everything happening in the classroom. A teacher with withitness can quickly identify and manage misbehavior, prevent disruptions, and ensure students stay on task. It helps maintain classroom discipline and flow.

Q64: Three Ways to Measure Central Tendency (3 Marks)

Answer:

1. **Mean:** The average of all values (sum divided by number of items)
2. **Median:** The middle value when data is arranged in order
3. **Mode:** The most frequently occurring value in a dataset

These measures help summarize large data sets into a single representative value.

Q65: Are You Extrinsically or Intrinsically Motivated? Give an Example (3 Marks)

Answer:

I am mostly **intrinsically motivated**, as I enjoy learning for the sake of knowledge. For example, I study psychology because I find human behavior fascinating, not just to get good grades.

Q66: Three Kinds of Students Motivated by Token Economy (3 Marks)

Answer:

1. **Disruptive Students:** Tokens help reinforce good behavior.
2. **Low-Achieving Students:** They get motivated through immediate rewards.
3. **Young Learners:** They respond well to visual rewards like stars or stickers.

Token economy builds **discipline and motivation** through positive reinforcement.

Q67: Why Is It Important to Manage Emotions? (5 Marks)

Answer:

Managing emotions is important because:

- It improves **mental health** and reduces stress
- Enhances **decision-making** and learning abilities
- Promotes **positive relationships** with peers and teachers
- Helps prevent impulsive or aggressive behavior
- Encourages a **calm and focused classroom environment**

Emotion regulation is key to **academic and personal success**.

Q68: What Is Cognitive Apprenticeship? (5 Marks)

Answer:

Cognitive apprenticeship is a teaching method where students learn by **observing expert thinking** and then practicing under guidance.

Key features:

- **Modeling:** Teacher shows how to solve a problem
- **Scaffolding:** Step-by-step support is given
- **Fading:** Support is gradually removed
- **Reflection:** Student evaluates their performance

It helps students learn **real-world thinking skills** in a structured way.

Q69: Is Language Part of Material or Non-Material Culture? Explain. (5 Marks)

Answer:

Language is part of **non-material culture**.

- Non-material culture includes beliefs, values, symbols, and communication styles.
- Language reflects **how a society thinks, behaves, and interacts**
- It shapes worldviews and transmits **cultural knowledge** across generations

Though it is spoken or written, its essence lies in **ideas and meaning**, not physical form.

Q70: Which Positive Qualities Did You Learn in School? How Were They Inculcated? (5 Marks)

Answer:

I learned **discipline, teamwork, responsibility, and time management** in school.

- **Discipline** was taught through punctuality and uniform rules
- **Teamwork** developed via group projects and sports
- **Responsibility** came from assigned duties (e.g., class monitor)
- Teachers modeled and reinforced these behaviors daily

These qualities are now part of my **personality and habits**.

Q71: What Is Action Zone and Its Significance? (5 Marks)

Answer:

Action zone refers to the **front-center area** of a classroom where students are more likely to be engaged and observed by the teacher.

Significance:

- Students here receive **more attention** and are more likely to participate
- Teachers can monitor their behavior and learning easily
- Helps manage classroom dynamics by placing **active or struggling students** in this area

It's a useful strategy for promoting **active learning and classroom control**.

Q72: What Are the Three Measures of Central Tendency? (3 Marks)

Answer:

1. **Mean:** Average of all values (total sum ÷ number of items)
2. **Median:** Middle value when data is arranged in ascending order
3. **Mode:** Most frequently occurring value in the data set

These help summarize and understand large sets of data efficiently.

Q73: Scenario – Asad Watches a Movie Where a Boy Gets Punished for Cheating, So He Avoids Cheating. What Theory Is This? (3 Marks)

Answer:

This is an example of **Vicarious Learning** from **Social Learning Theory** (Albert Bandura). Asad learns by **observing consequences** faced by others and **modifies his own behavior** to avoid punishment. This is also linked to **vicarious reinforcement**.

Q74: Difference Between Short-Term Memory and Long-Term Memory (3 Marks)

Short-Term Memory	Long-Term Memory
Temporarily stores information	Stores information permanently
Duration: 15–30 seconds	Duration: Lifetime (if rehearsed)
Capacity: 5–9 items	Unlimited capacity

STM is for quick tasks; **LTM** is for knowledge retention.

Q75: Define Creativity (3 Marks)

Answer:

Creativity is the ability to produce **original, novel, and useful ideas**.

It involves **divergent thinking**, flexibility, and innovation. Creative individuals can think beyond norms and generate **unique solutions** to problems.

Q76: Three Qualities of an Expert (3 Marks)

Answer:

1. **Deep Knowledge:** Experts have a vast and well-organized knowledge base in their domain.
2. **Efficient Problem-Solving:** They can solve problems faster and more accurately.
3. **Automaticity:** Experts perform tasks smoothly with less conscious effort due to repeated practice.

Experts show both **skill and adaptability** in their fields.

Q77: Cognitive Approach to Motivation (3 Marks)

Answer:

The **cognitive approach to motivation** focuses on **internal mental processes**, such as beliefs, expectations, and goals. It suggests that students are motivated by:

- **Self-efficacy** (belief in their abilities)
- **Goal-setting**
- **Attribution** (how they explain success or failure)

This approach emphasizes that **thinking influences motivation** and behavior in learning.

Q78: Jacob Is a Student With Low Motivation. What Would You Suggest? (3 Marks)

Answer:

To improve Jacob's motivation:

1. **Set achievable goals** to build confidence
2. **Provide frequent feedback** to show progress
3. **Use praise and encouragement** for effort, not just results
4. **Make learning relevant** by connecting topics to his interests
5. **Encourage peer interaction** through group activities

These steps can increase his **self-esteem and engagement** in learning.

Q79: Difference Between Algorithm and Heuristic (3 Marks)

Algorithm	Heuristic
Step-by-step method to solve a problem	Shortcut or rule of thumb to simplify decisions
Guarantees a correct solution	No guarantee, but quicker and easier
Slower but accurate	Faster but may be inaccurate

Example:

- Algorithm: Long division
- Heuristic: Estimating using rounding

Q80: Scenario-Based – (Assumed Sample)

Scenario: A student gives wrong answers in class but still receives attention and laughter from classmates. He continues the behavior. What explains this?

Answer:

This is an example of **positive reinforcement** from **operant conditioning**.

- The student's behavior (wrong answers) is **reinforced by peer attention**, which motivates him to repeat it.
- The teacher should **change reinforcement** patterns to encourage correct responses.

1. Define Self-Control (3–5 marks)

Self-control is the ability to regulate one's thoughts, emotions, and behaviors in the face of temptations or impulses. It helps learners stay focused on goals, avoid distractions, and behave appropriately in different situations.

In education, students with strong self-control can resist distractions, manage their time wisely, and complete tasks even when they are difficult. For example, a student may avoid checking their phone during study time due to good self-control.

2. Why is Managing Emotions Important? (3–5 marks)

Managing emotions is crucial for students' success and well-being. Emotional regulation helps students handle frustration, anxiety, anger, and excitement in healthy ways. It contributes to better concentration, decision-making, and social relationships.

Example: A student who can manage test anxiety is more likely to perform well than one overwhelmed by fear. Teachers who promote emotional management foster a positive learning environment.

3. Bandura – Two Ways of Learning (3–5 marks)

Albert Bandura emphasized **social learning**, where individuals learn from observing others. His two key methods are:

1. **Observational Learning (Modeling):** Learning occurs by watching the behavior of others and imitating them.
Example: A child sees a classmate praised for helping and decides to help others too.
2. **Vicarious Reinforcement:** When learners see others being rewarded or punished, they learn from the consequences without experiencing them directly.
Example: A student avoids cheating after seeing another student punished for it.

These ideas form the core of Bandura's Social Cognitive Theory.

4. Prerequisites of Essay-Type Questions (3–5 marks)

To answer essay-type questions effectively, a student needs the following:

1. **Clear Understanding:** The student must grasp the topic and related concepts.
2. **Organizational Skills:** A well-structured answer with an introduction, body, and conclusion is necessary.
3. **Relevant Content:** Use of examples, evidence, and explanations strengthens the answer.
4. **Writing Proficiency:** Good grammar, vocabulary, and coherence enhance clarity.

These skills enable learners to express their ideas thoroughly and logically.

5. As a Teacher, How Will You Manage Time? (3–5 marks)

Time management is essential for effective teaching. As a teacher, I would:

1. **Plan Lessons in Advance:** Have clear objectives and materials ready.
2. **Set Priorities:** Focus more time on complex topics or weaker students.
3. **Use Timers or Alarms:** Keep track of activities and transitions.
4. **Minimize Distractions:** Maintain classroom discipline.
5. **Reflect and Adjust:** Review time usage regularly and improve where needed.

Efficient time management improves both teaching quality and student learning.

6. Steps for Making a Portfolio (3–5 marks)

A **student portfolio** is a collection of work that showcases learning progress. Steps include:

1. **Set Clear Goals:** Decide the purpose (e.g., assessment, reflection).
2. **Collect Evidence:** Include assignments, projects, tests, and reflections.
3. **Organize the Material:** Arrange items by date, subject, or theme.
4. **Reflect on Progress:** Add student or teacher comments on strengths and areas of improvement.
5. **Review and Update:** Periodically revise content to keep it relevant.

Portfolios support self-assessment and showcase academic growth over time.

7. Two-Way Approach in Learning Objectives (3–5 marks)

A **two-way approach** in learning objectives considers both:

1. **Teacher Perspective (Instructional Goals):** What the teacher plans to teach.
2. **Student Perspective (Learning Outcomes):** What the student is expected to learn and demonstrate.

This approach ensures that teaching is aligned with meaningful learning, focusing not only on content delivery but also on student performance. It enhances clarity, purpose, and assessment.

8. Steps of Conceptual Change (3–5 marks)

Conceptual change refers to replacing students' incorrect beliefs with accurate scientific or academic understanding. The steps include:

1. **Identify Misconceptions:** Recognize the learner's existing (wrong) understanding.
2. **Create Cognitive Conflict:** Introduce new evidence that challenges the old idea.
3. **Present the Correct Concept:** Clearly explain the right information with examples.
4. **Support the New Understanding:** Reinforce through discussions, practice, and reflection.
5. **Encourage Internalization:** Let students apply the concept in new contexts.

This process promotes meaningful and lasting learning.

9. Define Schema (3–5 marks)

A **schema** is a cognitive structure or mental framework that helps individuals organize and interpret information. It allows the brain to make quick sense of new experiences based on past knowledge.

Example: When a child sees a four-legged animal and calls it a "dog" because that's their existing schema, even if it's a cat. As they learn more, their schema expands or changes.

Schemas are essential in understanding how people learn, remember, and process information.

10. Working Backward Strategy and Analogical Thinking (5 Marks Total — Split Below):

A. Working Backward Strategy:

This problem-solving strategy involves starting from the desired outcome and tracing steps back to the starting point. It is useful in math problems or situations where the end goal is known, but the method to get there is not.

Example: If a puzzle solution is known, one may work backward to see how it was reached.

B. Analogical Thinking:

Analogical thinking involves solving a problem by finding a similar situation (an analogy) and applying the same solution method. It is based on transferring knowledge from a familiar domain to a new one.

Example: Understanding the structure of an atom by comparing it to a solar system (nucleus as the sun, electrons as planets).

Short Questions:

1. Categories of Tests:

- **Achievement Tests:** Measure what a student has learned in a subject.
- **Aptitude Tests:** Predict future learning or performance.
- **Personality Tests (optional third):** Measure emotional and behavioral traits.

2. What happens when one can't perceive emotions?

If a person cannot perceive emotions (known as **alexithymia**), it affects their ability to understand others, communicate effectively, build relationships, and handle social situations. This can hinder both personal growth and academic success.

✓ Long Questions:

1. Difference between Engaged Time and Academic Learning Time:

Engaged Time	Academic Learning Time
Time when students are actively involved in learning tasks (e.g., reading, writing).	Time when students are not only engaged but also correctly learning the material.

Engaged Time	Academic Learning Time
Includes all on-task behavior, even if it's ineffective.	Focuses on effective engagement leading to actual learning outcomes.
May include distractions or errors.	Indicates real understanding and retention.

Example: A student reading a book but not understanding it = engaged time. If they read and understand the concepts = academic learning time.

2. Action Zone of the Classroom:

The **Action Zone** refers to the area in the classroom where students are more likely to interact with the teacher and remain more engaged. Typically, this zone includes front-row and center seats. Students in this area receive more attention, feedback, and are often more participative.

Implication: Teachers should move around to interact with all students, not just those in the action zone, to ensure equal learning opportunities.

3. How can a teacher hold the attention of the class (Five Ways)?

1. **Use Visual Aids:** Charts, videos, and diagrams help maintain focus.
2. **Vary Tone and Pace:** Changing voice tone and speed keeps students attentive.
3. **Ask Questions Frequently:** Engages students and keeps them mentally active.
4. **Use Real-Life Examples:** Helps connect abstract ideas to everyday life.
5. **Incorporate Interactive Activities:** Group tasks, discussions, or games make learning more engaging.

Enlist any three stages of cognitive development by Piaget.

1. **Sensorimotor Stage (Birth to 2 years):** The child learns through physical interaction with the environment using senses and motor skills.
2. **Preoperational Stage (2 to 7 years):** Children develop language and symbolic thinking but lack logical reasoning.
3. **Concrete Operational Stage (7 to 11 years):** Logical thinking about concrete objects develops; they understand concepts like conservation and classification.

Enlist two categories of tests.

1. **Standardized Tests:** These are formal tests administered and scored in a consistent manner, e.g., IQ tests.

2. **Teacher-made Tests:** These are informal tests developed by teachers for assessing specific classroom learning objectives.

Define Over Planning in context of teaching.

Overplanning refers to preparing excessively detailed lesson plans or material that may overwhelm both the teacher and students. It can reduce flexibility during teaching and limit student-centered learning or spontaneity in the classroom.

Self-perception facilitates one's learning or not? Justify your stance.

Yes, self-perception plays a significant role in learning. When a student views themselves as capable and competent, it enhances confidence, motivation, and effort, which positively affects learning outcomes. A negative self-image, on the other hand, can lead to fear of failure and reduced academic performance.

Enlist three aspects of Divergent Thinking.

1. **Fluency:** Ability to generate many ideas quickly.
2. **Flexibility:** Ability to think in different directions or from different perspectives.
3. **Originality:** Generating unique or novel ideas.

Define block scheduling with an example.

Block scheduling is a system where classes are scheduled for longer periods but fewer times per week.

Example: Instead of 40-minute daily math classes, students attend a 90-minute math class every other day.

Long Questions (5 Marks Each)

1. Differentiate between Algorithm and Heuristics.

- **Algorithm** is a step-by-step procedure that guarantees a correct solution if followed correctly.
Example: Solving a math problem using a formula.
- **Heuristic** is a general strategy or rule of thumb that helps to solve problems faster but doesn't always guarantee a correct solution.
Example: Guessing a password based on common patterns.

Difference Summary:

Feature	Algorithm	Heuristic
Accuracy	Always correct	Not always correct
Speed	Slower	Faster

Feature	Algorithm	Heuristic
Process	Systematic, logical	Intuitive, trial and error

2. Explain socio-cultural view of motivation.

The socio-cultural view emphasizes the role of social interaction and cultural context in motivating students. It suggests that learners are motivated when they feel part of a learning community, engage in meaningful tasks, and receive support from peers and teachers. Motivation is enhanced through group work, collaborative learning, and socially valued activities. This view is influenced by Vygotsky's theory, which highlights the importance of culture, language, and interaction in learning.

3. Define Percentile Rank Scores.

Percentile rank is a score that indicates the percentage of people in a norm group who scored below a particular score.

For example: If a student is in the 75th percentile, it means they performed better than 75% of the students who took the same test.

It is commonly used in standardized assessments to compare an individual's performance with peers.

4. Explain Constructive View of Teaching.

The constructivist view of teaching emphasizes that learners actively construct their own understanding and knowledge through experience and reflection. Teachers act as facilitators rather than information providers.

Key elements include:

- Encouraging exploration and inquiry
- Connecting new information to prior knowledge
- Using real-life problem-solving tasks
- Promoting collaborative learning

This approach fosters deeper understanding, critical thinking, and long-term retention.
