

PSY405 - Lesson 43

The Grand Theory of Personality

(Big-picture map of personality psychology)

First, what is this lesson REALLY about?

This lesson is not teaching **one** theory.

It's teaching you **how all personality theories are grouped**.

Think of it like this:

Psychology had different "eras" or "mindsets" about what humans are and why they behave the way they do.

These mindsets are called **FORCES**.

WHAT DOES "FORCE" MEAN IN PSYCHOLOGY?

A **force** = a **major school of thought**

(Meaning: a broad way psychologists explain human behavior and personality)

So when teachers say:

- First force
- Second force
- Third force

They're saying:

"Which lens are we using to understand humans?"

THE THREE FORCES OF PSYCHOLOGY

 **FIRST FORCE: Psychoanalysis / Psychodynamic**

Core idea (in plain English):

Your personality is shaped by unconscious forces, inner conflicts, instincts, and childhood experiences.

This force says:

- Humans are **not fully aware** of why they behave the way they do
- A lot is happening **below consciousness**
- Childhood matters A LOT

Also called:

- Psychoanalysis
- Psychodynamic
- Intra-psychic (means *inside the mind*)

Theories included:

- Freud
- Jung
- Adler
- Karen Horney
- Erikson

SECOND FORCE: Behaviorism

Core idea (plain English):

You are what you learn. Behavior is shaped by rewards, punishments, and observation.

This force says:

- Forget unconscious stuff

- Focus only on **observable behavior**
- Personality = habits + learning history

Theories included:

- Pavlov
 - Watson
 - Thorndike
 - Dollard & Miller
 - Skinner
 - Bandura
 - Ellis (behavior-cognitive bridge)
-

THIRD FORCE: Humanistic / Phenomenology

Core idea (plain English):

Humans are not broken machines or animals. They are conscious, meaning-making beings with free will and potential.

This force says:

- Humans are **basically good**
- Focus on growth, choice, self-understanding
- Personality = how you **experience** life

Theories included:

- Maslow
- Rogers
- Kelly
- Murray
- Allport

- Cattell
- Sullivan
- (Adler overlaps here too)

Now let's go **force by force**, theory by theory.

FIRST FORCE IN DETAIL: PSYCHOANALYTIC THEORIES

1. FREUD'S THEORY (Foundation of personality psychology)

Freud believed:

| Human behavior is driven by unconscious instincts and childhood conflicts.

Key concepts you MUST understand:

Levels of Consciousness

Conscious

→ What you are aware of right now

Example: reading this message

Preconscious

→ Information you can recall easily

Example: your phone number

Unconscious

→ Hidden thoughts, desires, fears

Example: repressed childhood anger

👉 Freud said: **Unconscious controls most behavior**

◆ Mental Structures (Id, Ego, Superego)

Id

- Primitive, instinctual
 - Wants pleasure NOW
 - Operates on pleasure principle
- Example: "I want it. I don't care."

Ego

- Rational, problem-solver
 - Operates on reality principle
- Example: "Let's find a safe way."

Superego

- Moral conscience
 - Rules, values, guilt
- Example: "This is wrong."

👉 Personality = constant **conflict** between these three

◆ Instincts (Biological drives)

Instinct = inherited biological force that directs behavior

Two types:

1. Life Instinct (Eros)

- Survival
- Sex
- Pleasure
- Libido (sexual energy)

2. Death Instinct (Thanatos)

- Aggression

- Destruction
 - Self-harm
-

◆ Psychosexual Stages of Development

Freud said personality forms through **childhood stages**:

Each stage focuses on a body area and conflict.

If problems occur → **fixation** (stuck) or **regression** (going back)

Major stages:

- Oral
- Anal
- Phallic (Oedipal complex happens here)
- Latency
- Genital

Oedipal Complex

→ Child's unconscious attraction to opposite-sex parent and rivalry with same-sex parent

◆ Anxiety & Defense Mechanisms

Anxiety = feeling of threat

Types:

- Reality anxiety → danger from outside
- Neurotic anxiety → fear of losing control
- Moral anxiety → guilt/shame

Defense mechanisms = unconscious strategies ego uses to reduce anxiety

Example: repression, denial, projection

2. JUNG'S THEORY (Analytical Psychology)

Jung agreed with Freud BUT said:

| "Freud is too sex-obsessed."

Jung added depth.

◆ Personal Unconscious

- Repressed or forgotten experiences
- Organized into **complexes**

Complex = emotionally charged group of ideas

Example: inferiority complex

◆ Collective Unconscious (VERY IMPORTANT)

This is Jung's BIG idea.

Collective unconscious = inherited psychological memory of humanity

Contains **archetypes** (universal patterns):

- Persona → social mask
 - Shadow → dark side
 - Anima → feminine side in men
 - Animus → masculine side in women
 - Self → total integrated personality
-

◆ Psychological Types

- Introvert → inward-focused
 - Extrovert → outward-focused
-

◆ Stages of Development

- Childhood
- Young adulthood

- Middle age
 - Old age
-

3. ADLER'S THEORY (Individual Psychology)

Adler said:

“Humans are not driven by sex. They are driven by purpose and social interest.”

Key ideas:

- **Inferiority feelings** motivate growth
 - People strive for **superiority** (self-improvement, not dominance)
 - Humans are **social**, cooperative beings
-

Birth Order Theory

- First-born
- Middle child
- Youngest
- Only child

Each position shapes personality differently.

4. KAREN HORNEY'S THEORY

She focused on **culture and relationships**, not instincts.

◆ Basic Anxiety

Basic anxiety = feeling of being helpless in a hostile world

Starts in childhood when needs aren't met.

◆ Neurotic Personality

Develops when anxiety is unresolved.

She described **10 neurotic needs**, grouped into:

1. **Moving Toward People**

→ Clingy, approval-seeking

2. **Moving Against People**

→ Aggressive, controlling

3. **Moving Away from People**

→ Detached, isolated

◆ **Real Self vs Ideal Self**

- **Real self** → who you truly are
- **Ideal self** → who you think you *should* be

Big gap = neurosis

5. ERIK ERIKSON'S THEORY (Ego Psychology)

Erikson expanded Freud across the **whole lifespan**.

Key points:

- Personality shaped by **biology + culture**
 - Ego is active and adaptive
-

◆ **Psychosocial Stages (8 stages)**

Each stage has a **crisis**:

- Positive resolution → strong ego
- Negative resolution → weak ego

Example:

- Trust vs mistrust
- Identity vs role confusion (identity crisis)

Negative identity

→ Becoming what society warns you NOT to be

SECOND FORCE: BEHAVIORISM

Dollard & Miller (Stimulus–Response)

Habit = learned connection between stimulus and response

Learning needs:

1. Drive (want)
 2. Cue (stimulus)
 3. Response (action)
 4. Reward (reinforcement)
-

Skinner (Radical Behaviorism)

Skinner said:

| “Inner states are unnecessary. Behavior is shaped by consequences.”

◆ Operant Conditioning

Operant = behavior that changes environment

Reinforcement increases behavior

- Positive → add reward
- Negative → remove unpleasant thing

Punishment decreases behavior

Extinction → remove reward, behavior dies

Bandura (Social Learning)

People learn by **observing others**.

This is called **modeling**.

Example:

- Aggression learned from TV violence
-

Albert Ellis (Rational Emotive Behavior Therapy)

A-B-C Model

- **A** → Activating event
- **B** → Belief
- **C** → Consequence

Later added:

- **D** → Dispute irrational beliefs
 - **E** → Effect (emotional improvement)
-

THIRD FORCE: HUMANISTIC / PHENOMENOLOGY

Maslow's Hierarchy of Needs

Needs move from basic → higher:

- Physiological
- Safety
- Love/belonging
- Esteem
- Self-actualization

Self-actualization = reaching full potential

Rogers' Theory

Core idea:

| Personality is shaped by how you perceive your experience.

Actualizing Tendency

Innate drive to grow and improve.

Fully Functioning Person

Someone who:

- Is open to experience
 - Lives authentically
 - Uses full potential
-

Kelly's Theory

Personality = **personal construct system**

We interpret the world like scientists forming hypotheses.

Sullivan's Theory

Personality develops through **interpersonal relationships**.

Cattell's Trait Theory

Used **factor analysis** (statistical method) to identify traits.

Factor = trait

Murray's Theory

Personality:

- Is unique
 - Has recurring patterns
 - Aims to satisfy needs and goals
-

FINAL EVALUATION

- **First force** → reduces humans to instincts
- **Second force** → reduces humans to stimulus-response machines
- **Third force** → restores dignity, choice, and growth

Short Questions

Q1: What are the three forces in personality psychology?

Answer:

The three forces in personality psychology are:

1. **First Force – Psychoanalysis or Psychodynamic Psychology:** Focuses on unconscious processes, inner conflicts, and childhood experiences shaping personality.
2. **Second Force – Behaviorism:** Focuses on observable behavior, learning, and the effects of rewards and punishments.
3. **Third Force – Humanistic or Phenomenological Psychology:** Focuses on conscious experiences, free will, personal growth, and self-actualization.

Explanation:

These forces are like lenses for understanding humans. Each lens emphasizes different aspects: unconscious motives (first), learned behaviors (second), and conscious potential (third).

Example:

- First force: A child's unresolved childhood trauma causing adult anxiety
- Second force: A student studies hard because they get good grades (reinforcement)
- Third force: A person pursues art because they want personal growth

Tips:

Remember: **1st = unconscious, 2nd = learning, 3rd = growth**. Think of them as stages in understanding humans.

Q2: Which personality theories are included in the first force (Psychoanalysis)?

Answer:

The first force includes:

- Freud's theory
- Jung's theory
- Adler's theory
- Karen Horney's theory
- Erikson's theory

Explanation:

These theories focus on inner forces, childhood experiences, conflicts, and unconscious drives as the main shapers of personality.

Example:

- Freud emphasized sexual instincts
- Adler emphasized striving to overcome feelings of inferiority

Tips:

Think: **First force = mind under the microscope**. Anything about unconscious drives or inner conflict belongs here.

Q3: What are Freud's key concepts in personality development?

Answer:

Freud's key concepts are:

1. **Levels of Consciousness:** Conscious, preconscious, and unconscious.
2. **Mental Structures:** Id, Ego, Superego.
3. **Instincts:** Life (Eros) and Death (Thanatos).
4. **Psychosexual Stages of Development:** Oral, Anal, Phallic, Latency, Genital.
5. **Defense Mechanisms:** Strategies by ego to reduce anxiety.
6. **Means of Tapping the Unconscious:** Free association, dream analysis.

Explanation:

Freud believed most personality develops **unconsciously** through instinctual drives and childhood experiences. The ego uses defense mechanisms to protect from anxiety caused by conflicts between id, ego, and superego.

Example:

- Defense mechanism: Repression = forgetting a traumatic event
- Psychosexual stage: Anal stage – overly strict potty training may lead to rigid personality

Tips:

Visualize the **iceberg**: tip = conscious, underwater = unconscious. Id = wants, superego = rules, ego = negotiator.

Q4: Explain Jung's concepts of Personal and Collective Unconscious.

Answer:

- **Personal Unconscious:** Repressed, forgotten, or weakly conscious memories forming emotional clusters called **complexes**.
- **Collective Unconscious:** Universal inherited memories from ancestors, expressed as **archetypes** (Persona, Shadow, Anima/Animus, Self).

Explanation:

Jung expanded Freud by adding inherited psychological structures. Complexes influence behavior unconsciously. Archetypes are patterns we all carry from human history.

Example:

- Persona: Social mask we wear in public
- Shadow: Our hidden negative traits
- Anima/Animus: Inner feminine/masculine aspects

Tips:

Think **collective unconscious** = "**psychological DNA**" inherited from humans before you existed.

Q5: What is Adler's Individual Psychology?

Answer:

Adler's Individual Psychology emphasizes:

1. Humans are **unique** and social.
2. **Inferiority feelings** drive growth.
3. Birth order influences personality.
4. Personality develops through **striving for superiority** (self-improvement).

Explanation:

Unlike Freud, Adler said humans are **socially motivated** rather than purely sexual/instinctual. Everyone has a desire to improve and contribute to society.

Example:

- First-born: Responsible, leadership-oriented
- Youngest child: Spoiled, social

Tips:

Key words: **Inferiority** → **Motivation** → **Social interest**. Remember, Adler overlaps first and third forces because of human potential focus.

Q6: What are Karen Horney's contributions?

Answer:

1. **Basic Anxiety:** Feeling helpless in a hostile world.
2. **Neurotic Personality:** Ten needs categorized as:
 - Moving toward people (clinging)
 - Moving against people (aggressive)
 - Moving away from people (detached)
3. **Real Self vs Ideal Self:** Conflict causes neurosis.

Explanation:

Horney emphasized **culture and relationships** over instincts. Anxiety comes from unmet childhood needs like safety and love.

Example:

- Real self: "I am shy"
- Ideal self: "I wish I was outgoing" → tension, anxiety

Tips:

Think: Horney = **relationships + culture**, Freud = **instincts + biology**.

Q7: What is Erikson's Ego Psychology?

Answer:

Erikson believed:

1. Personality develops through **eight psychosocial stages** from infancy to old age.
2. Each stage has a **crisis** with positive or negative resolution.
3. Ego organizes life and ensures harmony with the environment.

Explanation:

Erikson extended Freud's childhood focus to **whole life span**, adding cultural and social dimensions. Successful resolution strengthens the ego.

Example:

- Adolescence: Identity vs Role Confusion → develop strong sense of self or negative identity

Tips:

Focus on **stages + crises + ego growth**. Use the mnemonic: **T-A-I-M-I-L-O-R** (Trust → Integrity) for stages if you want.

Q8: What are the second force theories?

Answer:

Second force (Behaviorism) theories:

- Dollard & Miller (Habit & Stimulus–Response)
- Skinner (Operant Conditioning)
- Bandura (Observational Learning / Modeling)
- Pavlov, Watson, Thorndike (Classical Conditioning / Learning)

- Ellis (Rational Emotive Behavior Therapy)

Explanation:

All these focus on **learning and environment** as determinants of personality. Internal unconscious motives are ignored.

Example:

- Rewarding a child for good grades (Skinner)
- Learning aggression from watching TV (Bandura)

Tips:

Keyword: **Learned behavior**. Ask yourself: Is this observable? Then it's second force.

Q9: Explain Dollard & Miller's Stimulus–Response Theory.

Answer:

Learning requires:

1. **Drive** – motivation to achieve something
2. **Cue / Stimulus** – signal to act
3. **Response** – behavior
4. **Reward / Reinforcement** – outcome that strengthens habit

Explanation:

Behavior is a chain: **motivation + cue → action → reward**. Repetition makes a habit.

Example:

- Drive: Hungry
- Cue: Smell of food

- Response: Eat
- Reward: Satisfaction → habit of eating at certain times

Tips:

Think S-R-R chain: **Stimulus → Response → Reward**

Q10: Explain Skinner's Operant Conditioning.

Answer:

Operant = behavior that affects the environment.

- **Reinforcement** → increases behavior (positive or negative)
- **Punishment** → decreases behavior
- **Extinction** → remove reinforcement → behavior disappears

Explanation:

Behavior is shaped by consequences, not inner thoughts. Positive = reward; Negative = remove discomfort.

Example:

- Positive reinforcement: Candy for cleaning room
- Negative reinforcement: Stop nagging when homework is done

Tips:

Key mnemonic: **PRN** – Positive, Remove, Negative

Q11: Explain Bandura's Social Learning Theory.

Answer:

- People **learn by observing others** (modeling)
- Behaviors are imitated if seen rewarded

Explanation:

Learning doesn't require direct experience; observing consequences of others' actions is enough.

Example:

- Watching aggressive cartoons → children imitate aggression

Tips:

Remember: **Monkey see, monkey do**, but smarter.

Q12: What is Ellis' A-B-C-D-E Model?

Answer:

- **A:** Activating event
- **B:** Belief
- **C:** Consequence
- **D:** Dispute irrational belief
- **E:** Effect of challenging belief

Explanation:

Personality issues arise from **irrational beliefs**, not events. By disputing them, emotional reactions improve.

Example:

- A: Failing exam
- B: "I'm a total failure"
- C: Depression
- D: Challenge belief: "One failure does not define me"
- E: Feel better, act constructively

Tips:

Think: **Event ≠ Outcome, belief = key**

Q13: What is Maslow's Hierarchy of Needs?

Answer:

Needs progress from **basic survival** → **self-actualization**:

1. Physiological
2. Safety
3. Love / Belonging
4. Esteem
5. Self-actualization

Explanation:

Lower needs must be met before higher growth needs. Few people reach self-actualization.

Example:

- Self-actualized: Imran Khan, Abdul Sattar Edhi

Tips:

Think pyramid: **broad base = most people, narrow top = few reach potential**

Q14: Explain Rogers' Phenomenological Theory.

Answer:

- Personality shaped by **perception of experiences**
- **Actualizing tendency**: innate drive to grow
- **Fully functioning person**: someone using full potential

Explanation:

Focuses on conscious awareness, choice, and personal growth, not instincts or conditioning.

Example:

- Artist pursuing creativity because it feels meaningful

Tips:

Remember: **Rogers = growth + perception + self-realization**

Q15: Explain Kelly and Sullivan's theories.

Answer:

- **Kelly:** Personality = personal construct system, we interpret the world like scientists forming hypotheses
- **Sullivan:** Personality develops through interpersonal relationships

Explanation:

Both emphasize **social/cognitive processes** over instincts or reward-punishment. Personality is dynamic and shaped by experiences.

Example:

- Kelly: "I trust people" = construct shaping behavior
- Sullivan: Friendships teach empathy and cooperation

Tips:

Keyword: **Interpersonal / interpretive lens**

Q16: Explain Cattell's Factor-Trait Theory.

Answer:

- Personality is composed of **traits**
- Factor analysis identifies clusters of traits (called factors)

- Traits = building blocks of personality

Explanation:

Cattell quantified personality using stats. Traits are stable tendencies influencing behavior.

Example:

- Factor: Extraversion includes sociability, assertiveness, activity level

Tips:

Think: **Traits = Lego pieces → personality = built from blocks**

Q17: Explain Murray's Theory of Personality.

Answer:

- Personality = unique, enduring patterns of behavior
- Functions: reduce conflicts, satisfy needs, plan for goals

Explanation:

Murray bridges humanistic and psychodynamic perspectives: focus on **motivation and needs**.

Example:

- Person planning career to satisfy achievement need

Tips:

Remember: **Personality = patterns + needs + goal-directed behavior**

Q18: Compare the three forces.

Answer:

Force	Focus	View of Humans	Limitation
First	Unconscious, instincts	Animals/instinct-driven	Reduces humans to instincts
Second	Learned behavior	Stimulus-response	Ignores inner thoughts
Third	Conscious growth, self-actualization	Human potential	Optimistic, less scientific

Explanation:

Each force highlights part of human behavior: instincts, learned responses, or potential. Modern psychology often integrates all three.

Example:

- A full psychologist might combine: therapy (3rd), behavior modification (2nd), understanding childhood trauma (1st)

Tips:

Think: **Past (1st) → Environment (2nd) → Growth (3rd)**

Long Questions

Q1: Explain the three forces in personality psychology and their significance.

Answer:

1. First Force: Psychoanalysis / Psychodynamic Psychology

- **Focus:** Unconscious processes, inner conflicts, and childhood experiences
- **Key Theories:** Freud, Jung, Adler, Horney, Erikson
- **Key Concepts:**
 - Levels of consciousness: conscious, preconscious, unconscious
 - Mental structures: Id, Ego, Superego

- Defense mechanisms: repression, denial, projection
- Psychosexual stages: oral, anal, phallic, latency, genital
- **View of Humans:** Driven by instincts, inner conflicts
- **Limitation:** Reduces humans to instinctual beings

2. Second Force: Behaviorism

- **Focus:** Observable behavior, learning from environment
- **Key Theories:** Pavlov, Watson, Thorndike, Skinner, Dollard & Miller, Bandura, Ellis
- **Key Concepts:**
 - Stimulus-response connections
 - Operant conditioning: reinforcement, punishment, extinction
 - Observational learning (modeling)
 - Rational Emotive Behavior Therapy (A-B-C-D-E model)
- **View of Humans:** Products of learning
- **Limitation:** Ignores thoughts, feelings, and unconscious processes

3. Third Force: Humanistic / Phenomenological Psychology

- **Focus:** Conscious experience, free will, personal growth
- **Key Theories:** Maslow, Rogers, Kelly, Murray, Allport, Cattell, Sullivan, Adler
- **Key Concepts:**
 - Self-actualization (Maslow)
 - Fully functioning person (Rogers)
 - Personal construct system (Kelly)
 - Trait theory and factor analysis (Cattell)
- **View of Humans:** Innately good, capable of growth
- **Limitation:** Hard to measure scientifically, overly optimistic

Explanation (Plain English):

Think of these forces as **three different lenses** to understand humans:

1. **First force:** looks inside the mind (unconscious, childhood)
2. **Second force:** looks at what you do (learned behavior, habits)
3. **Third force:** looks at who you *can become* (potential, growth)

In reality, psychologists today often combine insights from all three.

Example Table:

Force	Lens	Key Theorists	Focus	Example
First	Mind	Freud, Jung	Unconscious, instincts	Childhood trauma affecting adult behavior
Second	Behavior	Skinner, Bandura	Learning, environment	Rewarding child for studying
Third	Growth	Maslow, Rogers	Conscious choice, potential	Pursuing art to fulfill personal potential

Q2: Describe Freud's Psychoanalytic Theory of Personality.

Answer:

1. Levels of Consciousness

- **Conscious:** Thoughts you are aware of
- **Preconscious:** Thoughts you can recall easily
- **Unconscious:** Hidden desires, memories, and impulses

2. Mental Structures

- **Id:** Instincts, pleasure principle
- **Ego:** Rational decision-maker, reality principle

- **Superego:** Moral conscience, societal rules

3. Instincts

- **Life instinct (Eros):** Survival, sex, pleasure
- **Death instinct (Thanatos):** Aggression, destruction

4. Psychosexual Stages of Development

Stage	Age	Focus	Conflict / Event
Oral	0-1	Mouth	Weaning issues
Anal	1-3	Bowel/bladder	Toilet training
Phallic	3-6	Genitals	Oedipus/Electra complex
Latency	6-12	Dormant	Social skills
Genital	12+	Sexual maturity	Healthy relationships

5. Defense Mechanisms

- Repression, denial, projection, regression, rationalization

6. Methods to Tap Unconscious

- Free association, dream analysis, slips of tongue

Explanation (Plain English):

Freud thought personality is mostly unconscious. Think of your mind like an iceberg:

- Tip = conscious
- Underwater = unconscious

Your behaviors, fears, and desires mostly come from below the surface. Personality is a **balance between instinct (id), reality (ego), and morals (superego)**.

Example:

- A person forgetting a childhood trauma (repression)
- Overeating because of anxiety from stress (Id vs Ego conflict)

Q3: Explain Jung's Analytical Psychology.

Answer:

1. Personal Unconscious

- Memories that are repressed or forgotten
- **Complexes:** Emotional clusters of ideas (e.g., inferiority complex)

2. Collective Unconscious

- Inherited memories from ancestors
- **Archetypes:** Universal symbols
 - **Persona:** Social mask
 - **Shadow:** Dark side
 - **Anima/Animus:** Inner feminine/masculine
 - **Self:** Integrated personality

3. Psychological Types

- Introvert vs Extrovert
- Personality reflects orientation toward inner or outer world

4. Stages of Life Development

- Childhood, Young adulthood, Middle age, Life after retirement

Explanation:

Jung agreed with Freud about unconscious motives but added **inherited patterns**. Archetypes explain universal themes in myths, dreams, and behavior.

Example:

- Persona: Wearing professional mask at work
 - Shadow: Repressed anger that may show in dreams
 - Anima: A man embracing empathy (feminine side)
-

Q4: Describe Adler's Individual Psychology.

Answer:

1. Core Principles

- Individuals are unique and socially motivated
- **Inferiority feelings** drive growth
- **Striving for superiority:** Achieving personal goals and contributing to society

2. Birth Order Theory

- **First-born:** Responsible, leadership-oriented
- **Middle child:** Competitive, social
- **Youngest:** Spoiled, outgoing
- **Only child:** Mature, independent

3. Personality Development

- Shaped by goals, social interest, and overcoming inferiority

Explanation:

Adler emphasized **purpose and social connectedness** over sexual instincts. Humans grow by trying to overcome feelings of inferiority and contribute to society.

Example:

- A middle child becomes competitive and outgoing to gain attention
- First-born may take leadership roles due to responsibility pressure

Q5: Explain Karen Horney's Theory of Neurotic Needs and Real vs Ideal Self.

Answer:

1. Basic Anxiety

- Feeling helpless in a hostile world, starts in childhood

2. Neurotic Personality

- 10 needs, grouped into:
 - **Moving toward people:** seeking approval
 - **Moving against people:** aggression, dominance
 - **Moving away from people:** withdrawal, detachment

3. Real Self vs Ideal Self

- **Real Self:** True self
- **Ideal Self:** Person one wishes to become
- **Conflict** → anxiety and neurosis

Explanation:

Horney focused on **culture and relationships**, not instincts. Anxiety stems from unmet childhood needs. Neurotic behaviors arise from trying to cope.

Example:

- Real self: Shy
 - Ideal self: Outgoing → social anxiety
-

Q6: Explain Erikson's Ego Psychology and Psychosocial Stages.

Answer:

1. Ego Psychology

- Ego organizes life and maintains harmony with social and physical environment

2. Psychosocial Stages (8)

Stage	Age	Crisis	Positive Resolution	Negative Resolution
Trust vs Mistrust	0-1	Dependence	Trust	Insecurity
Autonomy vs Shame	1-3	Independence	Confidence	Doubt
Initiative vs Guilt	3-6	Action	Purpose	Inhibition
Industry vs Inferiority	6-12	Skills	Competence	Inferiority
Identity vs Role Confusion	12-18	Self-concept	Strong identity	Negative identity
Intimacy vs Isolation	18-40	Relationships	Love	Loneliness
Generativity vs Stagnation	40-65	Contribution	Care	Self-absorption
Integrity vs Despair	65+	Reflection	Wisdom	Regret

Explanation:

Erikson extended Freud to the **whole life span**, adding social and cultural context. Each stage's crisis shapes ego development.

Example:

- Adolescence: Identity crisis → positive = confident career choice, negative = confusion

Q7: Explain Behaviorist Theories: Dollard & Miller, Skinner, Bandura, and Ellis.

Answer:

1. Dollard & Miller – Stimulus-Response Theory

- Learning requires: Drive → Cue → Response → Reward

2. Skinner – Operant Conditioning

- **Operant:** behavior that changes environment
- **Reinforcement:** positive/negative → increase behavior
- **Punishment:** decrease behavior
- **Extinction:** remove reinforcement → behavior dies

3. Bandura – Social Learning / Modeling

- Observational learning
- Behaviors copied if rewarded
- Media can teach aggressive behaviors

4. Ellis – Rational Emotive Behavior Therapy (REBT)

- A-B-C-D-E model:
 - A: Activating event
 - B: Belief
 - C: Consequence
 - D: Dispute irrational belief
 - E: Effect on emotional state

Explanation:

Behaviorists focus on **learning from environment**. Internal thoughts are secondary. Ellis integrates **beliefs + cognition** into behavior.

Example:

- Bandura: Children imitate TV violence
- Skinner: Rewarding homework completion → more study
- Ellis: Challenge irrational belief → reduce anxiety

Q8: Explain Humanistic / Phenomenological Theories: Maslow, Rogers, Kelly, Sullivan, Cattell, Murray.

Answer:

1. Maslow – Hierarchy of Needs

- Needs from basic → self-actualization
- Pyramid shape: most people at base, few reach top

2. Rogers – Phenomenological Theory

- Personality = perception of experiences
- **Actualizing tendency:** innate drive to grow
- **Fully functioning person:** uses full potential

3. Kelly – Personal Construct Theory

- Personality = system of constructs to interpret reality

4. Sullivan – Interpersonal Theory

- Personality shaped by relationships and social experiences

5. Cattell – Factor-Trait Theory

- Traits = building blocks
- Factor analysis identifies clusters of traits (factors)

6. Murray – Needs and Personality

- Personality = recurring behavioral patterns
- Functions: reduce conflicts, satisfy needs, plan goals

Explanation:

Humanistic theories emphasize **conscious choice, personal growth, and potential**. Unlike first and second forces, humans are seen as capable, adaptable, and intrinsically motivated.

Example:

- Self-actualized person: Abdul Sattar Edhi (humanitarian work)
 - Fully functioning person: A musician creating freely for self-expression
-

Q9: Compare the three forces of psychology.

Answer Table:

Force	Focus	Human View	Strength	Limitation
First	Unconscious, instincts	Animal-like instincts	Explains inner motives	Reduces humans to instincts
Second	Observable behavior	Learning machines	Scientific, measurable	Ignores thoughts, feelings
Third	Conscious growth	Humans as potential	Positive, holistic	Less measurable, optimistic

Explanation:

- First = why we *feel*
- Second = why we *act*
- Third = why we *can become*

Modern psychology integrates elements from all three to understand human complexity.

CHEAT SHEET

1. Three Forces of Psychology

Force	Focus	Key Theorists	View of Humans	Quick Memory Hook
1st – Psychoanalysis / Psychodynamic	Unconscious, instincts, inner conflicts	Freud, Jung, Adler, Horney, Erikson	Driven by instincts & childhood conflicts	Mind microscope
2nd – Behaviorism	Observable behavior,	Skinner, Bandura, Pavlov, Watson,	Humans = learned habits	Monkey see, monkey do

Force	Focus	Key Theorists	View of Humans	Quick Memory Hook
	learning, environment	Dollard & Miller, Ellis		
3rd – Humanistic / Phenomenology	Conscious growth, self-actualization	Maslow, Rogers, Kelly, Murray, Allport, Cattell, Sullivan	Humans = good & growth-oriented	Potential unlocked

Tip: Think: **1st = Why we feel, 2nd = Why we act, 3rd = Who we can become**

2. First Force – Psychoanalysis (Freud & Others)

Freud

- **Id, Ego, Superego** – Mind's structure
- **Instincts:**
 - **Eros (life):** survival, sex, pleasure
 - **Thanatos (death):** aggression, self-destruction
- **Psychosexual Stages:** Oral → Anal → Phallic → Latency → Genital
- **Defense Mechanisms:** Repression, Denial, Projection, Regression
- **Memory Hook: I Eat Pie Like Grandma** (Id-Ego-Psyche; Oral-Anal-Phallic-Latency-Genital)

Example: Oral fixation → overeating/smoking

Jung

- **Personal Unconscious:** Repressed memories → **Complexes**
- **Collective Unconscious:** Inherited ancestral memory → **Archetypes**
 - **Persona:** Social mask
 - **Shadow:** Dark side
 - **Anima/Animus:** Inner feminine/masculine

- **Self:** Integrated personality
- **Psychological Types:** Introvert / Extrovert

Mnemonic: PSSAS = Persona, Shadow, Self, Anima/Animus

Example: Introvert hides emotions (Shadow), shows public mask (Persona)

Adler – Individual Psychology

- **Key Idea:** Inferiority feelings drive growth
- **Birth Order Effect:**
 - 1st-born: Responsible
 - Middle: Competitive
 - Youngest: Spoiled
 - Only: Independent
- **Memory Hook: F.I.S.T. = Feelings Inferiority Striving Together**

Example: Middle child becomes ambitious to stand out

Karen Horney

- **Basic Anxiety:** Helpless in hostile world
 - **Neurotic Needs:**
 - Toward people → approval
 - Against people → aggression
 - Away from people → withdrawal
 - **Real Self vs Ideal Self** → gap = neurosis
 - **Tip:** Think **childhood relationships shape anxiety**
-

Erikson – Ego Psychology

- **Ego = organizer & harmony keeper**
- **8 Psychosocial Stages:**

Stage	Age	Crisis	Positive	Negative
-----	-----	-----	-----	-----
Trust vs Mistrust	0-1	Dependence	Trust	Insecurity
Autonomy vs Shame	1-3	Independence	Confidence	Doubt
Initiative vs Guilt	3-6	Action	Purpose	Inhibition
Industry vs Inferiority	6-12	Skills	Competence	Inferiority
Identity vs Role Confusion	12-18	Self-concept	Identity	Negative identity
Intimacy vs Isolation	18-40	Relationships	Love	Loneliness
Generativity vs Stagnation	40-65	Contribution	Care	Self-absorption
Integrity vs Despair	65+	Reflection	Wisdom	Regret

Memory Hook: T-A-I-M-I-L-O-R (first letters of stages in order)

3. Second Force – Behaviorism

Dollard & Miller – Stimulus-Response

- Learning = **Drive → Cue → Response → Reward**
- **Tip:** Think S-R-R chain: Stimulus → Response → Reward

Example: Hungry → smell food → eat → satisfied → habit formed

Skinner – Operant Conditioning

- **Operant** = behavior changing environment
- **Reinforcement:** increases behavior
 - Positive: add reward
 - Negative: remove unpleasant stimulus
- **Punishment:** decreases behavior
- **Extinction:** remove reinforcement → behavior dies

Example: Clean room → get candy (positive reinforcement)

Bandura – Social Learning / Modeling

- **Learn by observation** → imitate behaviors
 - **Example:** Children imitate aggressive TV characters
 - **Memory Hook: Monkey see, monkey do**
-

Ellis – REBT (Rational Emotive Behavior Therapy)

- **A-B-C-D-E Model:**
 - A = Activating event
 - B = Belief
 - C = Consequence
 - D = Dispute irrational belief
 - E = Effect

Example: Fail exam → "I'm a failure" → dispute → feel better

4. Third Force – Humanistic / Phenomenology

Maslow – Hierarchy of Needs

- Pyramid: Physiological → Safety → Love → Esteem → Self-actualization
 - Most people stay at lower levels; few reach **self-actualization**
 - **Example:** Abdul Sattar Edhi, Imran Khan
 - **Memory Hook: Please Stop Loving Every Step** (P-S-L-E-S)
-

Rogers – Phenomenological Theory

- **Actualizing Tendency:** innate drive to grow
- **Fully Functioning Person:** uses potential fully, authentic
- **Tip:** Focus on conscious perception of experience

Kelly – Personal Construct Theory

- Personality = **constructs to interpret reality**
 - **Example:** “I trust people” shapes interactions
-

Sullivan – Interpersonal Theory

- Personality develops through **relationships**
 - Social experiences shape personality
-

Cattell – Factor-Trait Theory

- **Traits = building blocks** of personality
 - **Factor analysis** = statistical method to find clusters of traits
 - **Example:** Extraversion factor = sociability, assertiveness
-

Murray – Needs & Personality

- Personality = recurring, unique behavioral patterns
 - Function: satisfy needs, reduce conflict, plan for future
-

5. Quick Memory Mnemonics

- **Freud Stages:** Oral, Anal, Phallic, Latency, Genital → **OAPLG** → “*Old Apes Play Loud Games*”
- **Archetypes (Jung):** Persona, Shadow, Anima, Animus, Self → **PSSAS**
- **Maslow Pyramid:** Physiological, Safety, Love, Esteem, Self-actualization → **Please Stop Loving Every Step**
- **Erikson stages first letters:** T-A-I-M-I-L-O-R → easy recall
