

FINAL TERM CURRENT SUBJECTIVE (EDU430)

PREPARE BY: ASHAM

1. DEFINE BIOS AND BIT?

BIOS

BIOS (Basic Input/output System), can be defined as a program which is located in a Separate ROM on the motherboard, and defines, as the name suggests, basic input/output

BIT

A bit is the smallest unit of data in a computer and can have a value of either 0 or 1. It's like a tiny switch that can be either on or off. System, is a good example

2. BROADBAND ? 42

It is characterized by a high-speed data transfer, permanent access to the Internet, And thus the risk of unauthorized access to the network or your personal computer. In the Beginning of broadband Internet access, due to underdeveloped communication Infrastructure, Internet providers charged based on the data traffic but not time spent on the Internet (unlike dial-up Internet access). Today, in large cities, telecommunications infrastructure is developed, Therefore Internet providers do not charge money based on the time spent on the Internet or The amount of transferred data but they do charge by access speed

3. WHAT IS HACKER?

Hacker is a person who spends their time trying to gain access to information stored On other people's computers all around the world. Some hackers are just harmless browsing Types, but other have more invidious aims such as grabbing details of your credit cards or bank account, which may be stored in a file somewhere on your computer. If you access the Internet regularly you should consider installing a Firewall to protect yourself against hackers

CONTACT US: 03176848183

4. DEFINE HACKING?

Hacking is the act of gaining unauthorized access to computer systems or networks. It's like breaking into someone's digital property to steal information, cause damage, or just explore without permission.

5. DEFINE INACTIVE WINDOW?

An inactive window on a computer is a window that's open but not currently being used. It's like a background task; you can see it, but it's not the main thing you're working on at that moment. You can usually click on it to make it active and start using it again.

6. BENEFITS OF EMIS?

An EMIS (Education Management Information System) brings benefits by helping schools and governments organize data about students, teachers, and resources. This makes planning and decision-making easier, leading to better education policies, efficient resource allocation, and improved student outcomes.

7. PRACTICES FOR EMIS?

Best practices in implementing education management information systems (EMIS) Forty World Bank education projects over the last four years have had EMIS components, but Little is known about best practices and lessons learned from such investments. Case studies On EMIS planning and deployment, as well as best practices and lessons learned, would be Useful planning tools for donor staff and educational policymakers

8. IP DATAGRAM

It is the basic unit of information passed across the Internet. An IP Datagram is to the Internet as a hardware packet is to a physical network. It contains a source and destination Address along with data. Large messages are broken down into a sequence of IP Datagrams .

9. DIAL-UP LINE?

A dial-up line is a way to connect to the internet using a regular phone line. It's like making a phone call to the internet, but it's usually slower than modern broadband connections.

10. USE OF ICT FOR ILLITERATE YOUTH?

The use of Information and Communication Technology (ICT) for illiterate youth can provide engaging ways to teach basic literacy and life skills. Through interactive programs, videos, and games, ICT can make learning more accessible and enjoyable, even for those without traditional reading and writing abilities.

11. DISADVANTAGES OF ICT ?

Disadvantages of ICT (Information and Communication Technology) include potential security risks, like hacking, dependence on technology which can lead to problems if it fails, and sometimes it can be expensive to set up and maintain. It might also contribute to less face-to-face social interaction.

12. FORMATIVE ASSESSMENT?

Formative assessment is a method used by teachers to continuously monitor student progress during the learning process. Unlike summative assessments, which evaluate students at the end of a unit or term, formative assessments are ongoing and happen during the lessons. They can include quizzes, discussions, observations, or projects. The main goal is to identify areas where students might be struggling and provide immediate feedback and support to help them improve. This approach allows both teachers and students to understand what is going well and what needs more focus, making the learning process more flexible and tailored to individual needs.

13. DEFINE CRUST?

The crust refers to the outermost layer of the Earth. It's like the Earth's "skin" and is relatively thin compared to the other layers beneath it.

14. DEFINE INTERNET?

The internet is a vast network of interconnected computers and devices around the world. It's like a global highway that allows information, communication, and resources to flow between people, organizations, and systems, enabling access to websites, online services, and much more.

15. DEFINE WORKSTATION?

A workstation is a specialized computer designed for professional tasks, often requiring higher performance than regular PCs. It's like a powerful tool for tasks like graphic design, video editing, or scientific simulations. Workstations typically have enhanced processing power, memory, and graphics capabilities to handle demanding workloads.

16. HOMEPAGE?

A homepage is the main web page of a website, often serving as the starting point when a visitor arrives. It usually contains links to other sections of the site and gives an overview of what the website is about. Think of it like the front door or entrance to a building, guiding you to different rooms or areas.

17. DEFINE DRIVER?

A driver is a software that allows a computer's operating system to communicate with and control hardware devices, such as printers, graphics cards, or keyboards. It's like a translator that helps different parts of the computer "speak" the same language and work together smoothly.

18. DEFINE CONFIGURATION?

Configuration refers to the specific settings and arrangements that determine how a system or device operates. It's like customizing a setup to match your preferences or requirements. For example, configuring your smartphone involves adjusting settings such as display brightness, notification sounds, and app permissions to make the device work the way you want it to.

19. DEFINE DMAX AND DMIN?

DMAX

It is the point of maximum density in an image or an original.

DMIN

It is the point of minimum density in an image or an original.

20. BOOTING

This is defined as starting up a computer via the power switch, which loads the system Software into memory. Restarting the computer via a keystroke combination is called Rebooting or a warm boot

21. FILTER

It is a piece of software that an application uses for file-format conversion or special effects. PageMaker, for example, has a filter that lets it import Microsoft Word files, while Photoshop Has dozens of filters for special effects (such as image blurring). Filters can be part of the Main application or external programs called plug-ins

22. DE-SCREENING

It may be defined as removal of halftone dot patterns during or after scanning printed matter by Defocusing the image. This avoids more patterning and color shifts during subsequent halftone Reprinting

23. MATHEMATICAL MINDSET HELP IN LEARNING, EDUCATIONAL TECHNOLOGY?

Having a mathematical mindset helps in learning by fostering problem-solving skills, logical thinking, and the ability to analyze situations quantitatively. It's like a mental toolkit that makes learning math and applying it to real-world situations easier.

Educational technology, on the other hand, uses digital tools and resources to enhance teaching and learning. It's like having a digital assistant that offers interactive lessons, online quizzes, and other engaging ways to understand and practice various subjects.

24. ABBREVIATION OF E-MAIL,

The abbreviation "E-mail" stands for "Electronic Mail," referring to messages sent digitally over the internet

25. WHAT IS DIFFERENCE BETWEEN SOCIAL AND COGNITIVE?

Social refers to interactions and relationships with others, while **cognitive** relates to thinking, learning, and understanding. Social is about how we connect with people, and cognitive is about how our mind processes information.

26. WHAT ARE THE ADVANTAGES OF HANDHELD 3G DEVICES IN EDUCATION?

Handheld 3G devices in education offer the advantage of mobile internet access, allowing students and teachers to look up information, use educational apps, and communicate with each other from anywhere. They make learning more flexible and interactive, especially for those who might not have access to traditional internet connections.

27. WHAT IS THE IMPACT OF TEACHER FEEDBACK ON STUDENTS.?

Teacher feedback has a significant impact on students. It helps guide their learning by pointing out what they are doing right and where they might need improvement. Positive feedback can boost confidence and motivation, while constructive feedback can provide clear direction for improvement. Essentially, teacher feedback acts as a roadmap, helping students understand where they are in their learning journey and what steps they need to take to reach their goals.

28. HOW SMS ENABLED AND 3G MOBILES HELPS SUPPORT EDUCATION?

SMS-enabled and 3G mobiles help support education by allowing students and teachers to communicate, share information, and access educational materials from anywhere. They make learning more flexible and accessible, even without a high-speed internet connection, by using text messages and mobile internet.

29. WHAT ARE THE BENEFITS OF USING ICTS OUT SIDE THE COMPUTER CLASSROOM?

Using ICTs (Information and Communication Technologies) outside the computer classroom has the benefit of extending learning beyond traditional settings. It allows access to information, research, and collaboration from various places, making education more interactive and adaptable to different environments.

30. HOW RESPONSE SYSTEM OF CLASSROOM SUPPORT STUDENT ASSESSMENT?

The response system of a classroom, like using clickers or digital tools, helps support student assessment by allowing teachers to ask questions during lessons and instantly collect students' answers. This way, teachers can see what students understand and what needs more explanation, making learning more engaging and targeted.

31. WHAT IS CRASH? 72

Crash is a term describing what happens to hardware or software when it suddenly fails to work properly. The commonest symptom of a crash is the “frozen screen”, i.e. when the keyboard and/or mouse goes dead with the result that nothing can be typed and the cursor cannot be moved around the screen. Modern computers typically crash several times a day. Most crashes are not serious and are simply the result of faulty programming –i.e. most programming. Some kinds of crashes can be symptomatic of more serious problems, however, and should be investigated if they keep occurring. Operating systems themselves, e.g. Microsoft Windows, are particularly prone to crashes.
