## EDU430 – Final Term Past Papers File by Tanveer Online Academy

### (Subjective)

**Question: ANSI?**

**Answer:** This is the abbreviation of American National Standards Institute. ANC is the version of the C language approved by ANSI).

**Question: Inactive window?**

**Answer: Inactive Window**

It is a window that is open but is not the top window.

**Question: Cache?**

**Answer: Cache**

Cache is a small capacity memory which allows quick access to data. By storing data from working memory in cache, the speed of communication between processor and RAM is increased. Microprocessors use three levels of fast cache, L1, L2 and L3, used to store often used data.

**Question: Successful and relevant ICT facility?**

**Answer:** A successful ICT facility features high-speed internet, modern hardware, robust security, and user-friendly software. It provides responsive support, training, and accessibility features. Scalability, energy efficiency, and e-waste management are prioritized. Continuous upgrades and user feedback drive improvement. Clear policies, compliance, ergonomic design, and reliable power management complete the facility's offerings.

**Question: Benefit of technology?**

**Answer: Benefits of Technology**

- ☐ Increased efficiency and productivity
- ☐ Enhanced communication and collaboration
- ☐ Access to vast information and resources
- ☐ Automation of repetitive tasks
- ☐ Improved healthcare and medical advancements
- ☐ Enhanced education and learning opportunities
- ☐ Convenience and time-saving in daily tasks
- ☐ Better data storage, management, and analysis
- ☐ Increased global connectivity and reach
- ☐ Innovation and development in various fields

**Question: A/D converter?**

**Answer: A/D Converter**

A device used to convert analog data to digital data. Analog data is continuously variable, while digital data contains discrete steps.

**Question: Define configuration?**

**Answer: Configuration**

These may be defined as the components that make up a computer system (which model and what peripherals). This is the physical arrangement of those components (what's placed and where). It is the software settings that enable two computer components to talk to each other (as in configuring communications software to work with a modem).

**Question: DMAX and DMIN?**

**Answer: DMAX**

It is the point of maximum density in an image or an original.

**DMIN**

It is the point of minimum density in an image or an original.

**Question: Define internet?**

**Answer: Internet**

Internet is a huge collection of computer networks that can be communicated with each other. This word is coined from the words 'interconnection' and 'network'. Through this, each computer user can communicate and share common resources with other users.

**Question: Note on educational technology?**

**Answer:** Educational technology enhances learning by integrating digital tools and resources into the classroom. It facilitates interactive and personalized learning experiences, improves access to information, and supports collaborative learning. Tools like e-learning platforms, educational apps, and online resources enable remote learning and flexible study schedules. Data analytics in education helps track student progress and tailor instruction to individual needs, while multimedia content makes learning more engaging and effective.

**Question: Impact of computer literacy in schools?**

**Answer: Impact of 'computer-literacy' instruction on schools**

In most circumstances in schools, ICTs are used almost exclusively to provide instruction in “computer literacy”. Emerging research from OECD experience suggests such instruction may not be a productive use of time or resources.

**Question: Benefits of situating ICTs outside the computer classroom?**

**Answer: Costs/benefits of situating ICTs in schools**

Cost-benefit analyses of situating computers outside of classrooms, but rather in school libraries, teacher training institutions and community tele-centres (including those that are school-based), would be quite useful.

**Question: Which kind of assessment promotes active learning among students?**

**Answer:** Formative assessment promotes active learning among students. This type of assessment includes frequent, interactive evaluations of student understanding and progress, such as quizzes, peer reviews, in-class activities, and feedback sessions. It encourages continuous engagement, provides immediate feedback, and allows for adjustments in teaching and learning strategies.

**Question: Binary number system?**

**Answer: Binary Number System**

It is a counting system used in computers consisting of only 1's and 0's (zeros).

**Question: Hacker?**

**Answer: Hacker**

It is a slang term which is used for a technically sophisticated computer user who enjoys exploring computer systems and programs, sometimes to the point of obsession.

**Question: De screening?**

**Answer: De-screening**

It may be defined as removal of halftone dot patterns during or after scanning printed matter by defocusing the image. This avoids more patterning and color shifts during subsequent halftone reprinting.

**Question: Associate?**

**Answer: Associate**

It is linking a document with the program that created it so that both can be opened with a single command.

**Question: Workstation?**

**Answer:** A computer (also known as a workstation) connected to a Local Area Network (LAN) is a client that can receive information from and send information to the server that controls the LAN.

**Question: Computer literacy?**

**Answer:** Computer literacy is the ability to use computers and related technology efficiently. It encompasses basic skills such as operating a computer, using software applications, understanding internet navigation, and managing files. Higher levels of computer literacy involve troubleshooting, programming, and understanding cybersecurity principles. Being computer literate enables individuals to perform tasks effectively, enhances employability, and supports continuous learning in a digital world.

**Question: ICT outside the classroom?**

**Answer:** ICT outside the classroom enhances various aspects of daily life and professional activities. It supports remote work through communication tools like email, video conferencing, and collaboration platforms. In healthcare, ICT enables telemedicine, electronic health records, and medical research. It facilitates e-commerce, online banking, and digital marketing in business. ICT also improves public services, including e-governance, online tax filing, and digital identification systems. Additionally, it provides access to online education, social media, and entertainment, connecting people globally and fostering community engagement.

**Question: Formative assessment and it's ways?**

**Answer:** Formative assessment is an ongoing process used to monitor student learning and provide continuous feedback that can be used to improve teaching and learning. Here are some ways to implement formative assessment:

- ☐ Quizzes and polls
- ☐ Exit tickets
- ☐ Peer and self-assessment
- ☐ Observations
- ☐ Classroom discussions
- ☐ Interactive activities
- ☐ Written reflections
- ☐ Learning journals
- ☐ Concept maps

**Question: Booting?**

**Answer: Booting**

This is defined as starting up a computer via the power switch, which loads the system software into memory. Restarting the computer via a keystroke combination is called rebooting or a warm boot.

**Question: Firewall?**

**Answer: Firewall**

It is a mechanism that isolates a network from the rest of the Internet, permitting only specific traffic to pass in and out.

**Question: Pixel?**

**Answer: Pixels**

Pixel is a contraction of picture element. What you see on a computer Display Screen is made up of thousands of colored pixels or small dots, which can be set according to the user's choice to produce either low resolution output, medium resolution output or high resolution output, the usual combinations of pixels across each line of the screen (horizontal pixels) and down each line of the screen (vertical pixels) being 640 x 480, 800 x 600, 1024 x 768, 1280 x 1024. Thus, it indicates that the more pixels on the screen, the higher the resolution (i.e. producing a finer, sharper image) and the greater the variety of colors that can be displayed.

**Question: Crash?**

**Answer: Crash**

It is a problem (often caused by a bug) that causes a program, or the entire operating system, to unexpectedly stop working.

**Question: Disadvantages of ICT?**

**Answer:** ☐ Unequal access to technology can widen disparities.

☐ Over-reliance on technology may limit critical thinking skills.

☐ Cybersecurity threats can compromise sensitive information.

☐ Potential for decreased face-to-face interaction and social skills.

☐ Privacy breaches and data misuse pose significant risks.

☐ Initial costs and ongoing expenses can strain budgets.

☐ Rapid technological advancements may lead to equipment becoming quickly outdated.

**Question: Briefly explain bios and bit?**

**Answer: BIOS**

This is abbreviation of Basic Input Output System. Part of the computer's operating system that is built into the machine, rather than read from a disk drive at startup.

## **Bit**

It is a unit of measurement that represents one figure or character of data. A bit is the smallest unit of storage in a computer. Since computers actually read 0s and 1s, each is measured as a bit. The letter **A** consists of 8 bits which amounts to one byte. Bits are often used to measure the capability of a microprocessor to process data, such as 16-bit or 32-bit.

### **Question: Difference between social and cognitive presence?**

**Answer: Social Presence:** Establishes personal connections and community in online interactions.

**Cognitive Presence:** Engages learners in critical thinking and knowledge construction activities.

### **Question: How to disassemble of ICTs explain binary system?**

**Answer:** To disassemble ICTs, understand their components and functions. The binary system uses 0s and 1s to represent data and perform computer operations.

### **Question: Define webmaster?**

**Answer: Webmaster**

It may be defined as a person or group of people who maintain and administer a web server. Webmaster also refers to a standard Email address at most web hosts where comments and questions can be sent.

### **Question: Impact of ICT literacy in school?**

**Answer:** Impact of ICT literacy in schools includes:

- Enhanced learning experiences through digital resources and tools.
- Improved access to information and educational materials.
- Development of critical thinking and problem-solving skills.
- Preparation for future careers in a digital economy.
- Facilitation of collaborative and personalized learning.
- Integration of innovative teaching methods and assessment practices.
- Increased engagement and motivation among students.
- Bridging educational gaps and promoting equity in learning opportunities.

### **Question: Define folder with example?**

**Answer: Folder**

It is an object that can hold other objects, such as other folders and files.

### **Question: Define IP datagram?**

**Answer: IP Datagram**

It is the basic unit of information passed across the Internet. An IP Datagram is to the Internet as a hardware packet is to a physical network. It contains a source and destination address along with data. Large messages are broken down into a sequence of IP Datagrams.

**Question: Difference between encoding and encryption?**

**Answer: Encoding**

It is the file transfer formatting that enables encrypted, compressed or binary files to be transferred without corruption or loss of data.

**Encryption**

It is a way of coding information in a file or e-mail message so that if it is intercepted by a third party as it travels over a network it cannot be read.

**Question: Define IP?**

**Answer: IP**

Internet Protocol is the standard that allows dissimilar hosts to connect to each other through the Internet. This protocol defines the IP datagram as the basic unit of information sent over the Internet. The IP datagram consists of an IP header followed by a message.

**Question: Effects of ICT in education?**

**Answer: ICT in education:**

- Enhances learning with diverse resources.
- Boosts engagement through interactive tools.
- Tailors learning to individual needs.
- Connects globally for collaboration.
- Streamlines administrative tasks.
- Builds essential digital skills.
- Inspires innovative teaching methods.
- Improves access but requires investment.

**Question: Effect of interactive community and radio in education purpose?**

**Answer: Effect of interactive community and radio in education:**

- **Interactive Community:**
  - Fosters collaboration and peer learning among students.
  - Encourages sharing of ideas and knowledge.

- Builds a supportive and engaging learning environment.
- Promotes social interaction and teamwork skills.
- **Radio:**
  - Provides access to educational content in remote areas without internet access.
  - Facilitates distance learning and continuous education programs.
  - Offers a platform for broadcasting lessons, discussions, and educational programs.
  - Enhances listening and comprehension skills among students.

**Question: Write strategies for ICT in School?**

**Answer:** ☐ Ensure reliable internet and updated hardware.

- ☐ Train teachers on ICT tools and integration.
- ☐ Integrate ICT into curriculum and lesson plans.
- ☐ Use digital resources and multimedia.
- ☐ Facilitate student collaboration.
- ☐ Implement digital assessment methods.
- ☐ Educate on digital citizenship.
- ☐ Ensure accessibility for all students.
- ☐ Engage parents and community.
- ☐ Evaluate and adapt ICT integration strategies.

**Question: Define filter?**

**Answer: Filter**

It is a piece of software that an application uses for file-format conversion or special effects. PageMaker, for example, has a filter that lets it import Microsoft Word files, while Photoshop has dozens of filters for special effects (such as image blurring). Filters can be part of the main application or external programs called plug-ins.

**Question: Define Dial-up line?**

**Answer: Dial-up line**

It is a communication connection from your computer to a host computer over standard phone lines. Unlike a dedicated line, you must dial the host computer in order to establish a connection. Dial-up line is currently the most popular form of Net connection for the home user.

**Question: Term object leaning?**

**Answer:** Object learning refers to the process by which individuals acquire knowledge and understanding through direct interaction with physical objects or tangible materials. This hands-on

approach allows learners to explore, manipulate, and observe objects in real-world contexts, facilitating deeper understanding and retention of concepts. Object learning is particularly effective in early childhood education and STEM (Science, Technology, Engineering, and Mathematics) fields, as it encourages sensory exploration, problem-solving, and critical thinking skills development.

**Question: Industrial teaching?**

**Answer:** Industrial teaching focuses on preparing students for specific industries through practical, hands-on training and curriculum aligned with industry standards. It includes workplace simulations, skill development, internships, and partnerships with businesses to enhance career readiness.

**Question: Individual automated assessment feedback?**

**Answer:** Automated assessment feedback provides personalized guidance based on student performance, aiding in understanding, improvement, and engagement.

**Question: Integration of subjects with ICT?**

**Answer:** Integrating subjects with ICT involves using digital tools to enhance learning across disciplines, such as multimedia resources, simulations, online research, coding activities, digital storytelling, and educational apps.

**Question: Effect of feedback?**

**Answer:** Feedback in education:

- Improves student understanding and performance.
- Guides learning by highlighting strengths and areas needing improvement.
- Increases motivation and engagement.
- Supports self-regulated learning.
- Enhances teacher-student communication and collaboration.
- Facilitates continuous improvement and achievement of learning goals.

**Question: How ICT can be use to educate the illiterate people?**

**Answer:** ICT educates illiterate people through audiovisual content, interactive apps, text-to-speech, voice recognition, mobile learning, community centers, and digital literacy programs, making learning accessible and engaging.

**Question: Resampling?**

**Answer:** It is an increase or reduction in the number of pixels in an image, required to change its resolution without altering its size. See also down-sampling and interpolation.

**Question: Uses of LMS?**

**Answer:** With an LMS, learners have the ability to view, listen, and interact with the data. They have the options to try examples, complete assessments, and give evaluation or feedback on courses.

**Question: Batch file?**

**Answer:** A batch file is a script file containing a series of commands or instructions that are executed by the command interpreter or shell in a batch processing environment, typically found in operating systems like Windows or DOS. Batch files automate repetitive tasks, allowing multiple commands to be executed sequentially without user intervention, making them useful for tasks like file manipulation, system configuration, or software installation.

**Question: Byte?**

**Answer: Byte**

This is regarded as the amount of memory needed to store one character such as a letter or a number. It is equal to 8 bits of digital information. It is the standard measurement unit of a file size.

**Question: Dichroic mirror?**

**Answer: Dichroic Mirror**

This is a special type of interference filter, which reflects a specific part of the spectrum, whilst transmitting the rest. It is used in scanners to split a beam of light into RGB components.

**Question: Directory?**

**Answer: Directory**

It is a system that your computer uses to organize files on the basis of specific information.

**Question: Full duplex?**

**Answer:** Full duplex is data is flowing in both directions at the same time. When Remote echo is ON communication is occurring in full duplex.

**Question: Write some book names which are important in use of ICT?**

**Answer:** Some important books on the use of ICT include:

- "The World is Flat: A Brief History of the Twenty-First Century" by Thomas L. Friedman
- "The Shallows: What the Internet Is Doing to Our Brains" by Nicholas Carr
- "Disrupting Class: How Disruptive Innovation Will Change the Way the World Learns" by Clayton M. Christensen, Michael B. Horn, and Curtis W. Johnson

- "The Innovators: How a Group of Hackers, Geniuses, and Geeks Created the Digital Revolution" by Walter Isaacson
- "Understanding Media: The Extensions of Man" by Marshall McLuhan
- "Blown to Bits: Your Life, Liberty, and Happiness After the Digital Explosion" by Hal Abelson, Ken Ledeen, and Harry Lewis

These books cover various aspects of ICT, its impact on society, education, innovation, and the digital revolution.

**Question: Educational content for dissemination through ICTs?**

**Answer:** Educational content for ICT dissemination includes interactive simulations, multimedia presentations, online textbooks, e-learning platforms, educational apps, webinars, OER, social media tools, podcasts, and AR/VR experiences, enhancing learning accessibility and engagement.

**Question: How assessment facilitate learning. Support answer with example?**

**Answer:** Assessment facilitates learning by providing feedback, identifying gaps in understanding, motivating students, and guiding teaching strategies. For example, detailed feedback on assignments helps students improve and adjust their learning approach.

**Question: Use of ICT for illiterate youth?**

**Answer:** ICT for illiterate youth:

- Audiovisual learning with educational videos.
- Interactive apps for basic literacy and numeracy.
- Voice-based technology for accessibility.
- Digital literacy programs combining skills.
- Mobile learning for accessibility.
- Community centers with ICT resources.

**Question: How should ICTs components in education projects of donors have been identified and quantified?**

**Answer:** Donors identify and quantify ICT components in education projects through needs assessment, technology evaluation, stakeholder engagement, and budget planning, ensuring effective integration and impact.

**Question: Homepage?**

**Answer: Homepage**

Home page is the first hypertext document to be shown when a user follows a link to the web server.

**Question: Email?**

**Answer: E-mail**

It is called Electronic Mail. Private messages sent between users on different computers, either over a network or via a modem connection to an on-line service or BBS.

**Question: What are benefits of using technology giving feedback?**

**Answer:** Using technology for feedback:

- Provides instant and personalized responses.
- Allows for remote access and flexibility.
- Incorporates multimedia for clarity and engagement.
- Offers data-driven insights into student performance.
- Saves time and enhances efficiency for educators.
- Increases student motivation and participation in learning.

**Question: Address Resolution?**

**Answer: Address Resolution**

It is the conversion of an IP Address to the corresponding low-level physical address.

**Question: Histogram?**

**Answer: Histogram**

This is a chart displaying the tonal ranges present in an image as a series of vertical bars.

**Question: Clipboard?**

**Answer: Clipboard**

This is an area used to temporarily store cut or copied information. The Clipboard can store text, graphics, objects, and other data. The Clipboard contents are erased when new information is placed on the Clipboard or when the computer is shut down.

**Question: Compression?**

**Answer: Compression**

This may be referred as the reduction in size of an image file. See also lossy and non-lossy.

**Question: Hue?**

**Answer: Hue**

This is the color of an object perceived by the eye due to the fact that a single or pair of RGB primary colors predominates.

**Question: ISO?**

**Answer: ISO**

It is abbreviation of International Organization for Standardization, the group that developed the OSI protocols.

**Question: Domain name System, some domain name?**

**Answer: DNS**

This is called Domain Name System. A general purpose distributed, replicated, data query service. Its principal use is the lookup of host IP addresses based on host names. The host names are also known as domain names. Some important domains are: .COM (commercial), .EDU (educational), .NET (network operations), .GOV (U.S. government), and .MIL (U.S. military). Most countries also have a domain. For example, .US (United States), .UK (United Kingdom), .AU (Australia).

**Question: Bps bit per second?**

**Answer: Bps**

It may be defined as, Bits Per Second is the unit used for measuring line speed, the number of information units transmitted per second.

**Question: File server?**

**Answer: File Server**

It is a computer that shares its resources, such as printers and files, with other computers on the network. An example of this is a Novell NetWare Server which shares its disk space with a workstation that does not have a disk drive of its own.

**Question: Where should computer reside if they have great impact in education?**

**Answer:** Computers should reside centrally in educational settings where they can be accessed by all students and teachers, ensuring equitable access and maximum utilization for impactful learning.

**Question: Explain with concrete example how many subject can be integrated with icts as compared to other subject?**

**Answer:** ICTs can integrate multiple subjects effectively by using multimedia, interactive simulations, and collaborative tools. For instance, science lessons can include virtual experiments, while history classes use digital archives for primary sources, enhancing learning across disciplines.

**Question: Advantage of formative assessment?**

**Answer:** Formative assessment benefits include providing immediate feedback to guide learning, identifying student strengths and weaknesses, promoting active engagement, and supporting ongoing improvement in understanding and performance.

**Question: Abbreviation of EPS, EBDCI**

**Answer:**

**EPS:** This is abbreviation of Encapsulated PostScript.

**EBDCI:** It is abbreviation of Extended Binary-Coded Decimal Interchange Code.

**Question: Advantages of technology in educational sector?**

**Answer:** ☐ Provides access to vast educational resources and information online.

- ☐ Engages students through multimedia, simulations, and interactive tools.
- ☐ Tailors educational experiences to individual learning styles and paces.
- ☐ Facilitates collaboration among students and educators globally.
- ☐ Streamlines administrative tasks such as grading and attendance.
- ☐ Enables remote learning and asynchronous education.
- ☐ Prepares students with digital literacy and technical skills for future careers.
- ☐ Encourages new teaching methods and pedagogical approaches.
- ☐ Provides learning opportunities for remote or underserved populations.
- ☐ Increases student engagement and motivation through gamification and interactive learning experiences.

**Question: Different types of field trips for active learning of students?**

**Answer:** Different types of field trips for active learning of students include visits to museums, historical sites, nature reserves, and industry workplaces.

**Question: How interactive radio networks in outside educational sector help benefit education?**

**Answer:** Interactive radio networks in the outside educational sector benefit education by providing access to educational programming, distance learning opportunities, and community engagement through interactive discussions and broadcasts.

**Question: Successful and Relevant strategies of using ICT in education?**

**Answer:** Successful and relevant strategies of using ICT in education include integrating digital resources into curriculum, providing teacher training on ICT tools, ensuring reliable internet access, and promoting interactive learning through educational apps and platforms.

**Question: How handheld devices such as 3G mobile phones help in educational purpose?**

**Answer:** Handheld devices like 3G mobile phones help in educational purposes by enabling access to online resources, educational apps, communication with teachers and peers, and facilitating mobile learning and research.
