

ENG502

Syntax-related Terms

1. **The Prescriptive Approach:** This approach sets rules for how language should be used (correct grammar, usage, etc.).
2. **The Descriptive Approach:** Describes how language is actually used by people in real life, without judging correctness.
3. **Structural Analysis:** Breaking down sentences into their smaller parts to understand how they work together.
4. **Constituent Analysis:** Examining the components (constituents) that make up a sentence, such as subjects, verbs, and objects.
5. **Labeled and Bracketed Sentences:** A way of showing sentence structure using labels (like "subject," "verb") and brackets to group parts of a sentence.
6. **A Gaelic Sentence:** A sentence in the Gaelic language, which is part of the Celtic language family.
7. **Syntax:** The rules and structure of sentence formation in a language.
8. **Generative Grammar:** A theory that suggests language has rules that generate all possible sentences that are grammatically correct.
9. **Properties of Generative Grammar:** Features of generative grammar, like having finite rules and the ability to generate infinite sentences.
10. **Well-Formed Syntactic Structures:** Sentences that follow the rules of syntax and are grammatically correct.
11. **Finite Number of Rules:** The idea that there are a limited number of grammar rules to generate sentences.
12. **Recursion:** A process where sentences can be embedded within other sentences, allowing for infinite sentence possibilities.
13. **Surface Structure:** The way a sentence is actually written or spoken.
14. **Deep Structure:** The underlying meaning or abstract form of a sentence, before it's transformed into surface structure.
15. **Structural Ambiguity:** When a sentence can be interpreted in more than one way because of its structure.
16. **Symbols Used in Syntactic Description:** The symbols (like arrows or brackets) used to show the structure of sentences.
17. **Labeled Tree Diagrams:** Visual diagrams showing sentence structure, with labels for each part of the sentence.
18. **Phrase Structure Rules:** Rules that explain how different parts of a sentence can be combined to form a grammatically correct structure.
19. **Lexical Rules:** Rules about how individual words and their meanings fit into sentences.
20. **Transformational Rules:** Rules that describe how sentences can be transformed (e.g., turning a statement into a question).

21. **Particle Movement:** A type of transformational rule where words (like "not" or "only") are moved within a sentence.
22. **IC Analysis:** Immediate Constituent analysis, breaking down sentences into their immediate parts (like subject and predicate).

Semantics (Meaning)

1. **Semantics:** The study of meaning in language.
2. **Conceptual or Denotative Meaning:** The direct, dictionary definition of a word.
3. **Associative or Connotative Meaning:** The emotional or cultural associations a word may have.
4. **Prepositional Meaning:** The meaning derived from how words relate to one another in a sentence (often seen in prepositions).
5. **The Prosodic Meaning:** Meaning conveyed through tone, pitch, and rhythm in speech.
6. **Semantic Features:** The characteristics that make up the meaning of a word (e.g., "man" has features like male, adult, human).
7. **Semantic Roles:** The different "roles" words can play in a sentence, like who is doing the action or who is receiving it.
 - **Agent:** The doer of the action.
 - **Theme:** The thing being acted upon.
 - **Instrument:** The tool used to carry out the action.
 - **Experiencer, Location, Source, Goal:** Various roles that tell who or where something happens.
8. **Lexical Relations:**
 - **Synonymy:** Words with similar meanings (e.g., "happy" and "joyful").
 - **Antonymy:** Words with opposite meanings (e.g., "hot" and "cold").
 - **Hyponymy:** A relationship where one word is a more specific version of another (e.g., "rose" is a hyponym of "flower").
 - **Prototypes:** The best examples or typical cases of a category (e.g., a robin is a prototype of a bird).
 - **Homophony, Homonymy, Polysemy:** Words that sound the same, are spelled the same, or have multiple meanings.
 - **Metonymy:** Using one word to stand for something closely related (e.g., "the White House" for the U.S. government).

Pragmatics (Contextual Meaning)

1. **Pragmatics:** The study of how context affects the meaning of language.
2. **Invisible Meaning:** The implied meaning that is not directly stated but understood from context.
3. **No Text Without Context:** Language only makes sense when we know the context it's used in.
4. **Linguistic Context:** The surrounding words or sentences that help determine meaning.
5. **Physical Context:** The real-world environment in which communication happens.
6. **Social/Cultural Context:** The societal or cultural background influencing communication.

7. **Deixis/Deictic Expressions:** Words or phrases that depend on context for meaning (e.g., "here," "there," "now").
 - **Person Deixis:** Refers to the people involved (e.g., "I," "you").
 - **Place Deixis:** Refers to the location (e.g., "here," "there").
 - **Time Deixis:** Refers to time (e.g., "now," "tomorrow").
8. **Reference:** The act of pointing to or identifying something in communication.
9. **Inference:** The meaning we deduce from context, not explicitly stated.
10. **Anaphora:** A way of referring back to something previously mentioned (e.g., "John said he was tired").
11. **Presupposition:** Something assumed to be true before the sentence is spoken (e.g., "She stopped smoking" assumes she used to smoke).
12. **Constancy under Negation Test:** Checking if the meaning of a sentence stays the same when negated (e.g., "She is not happy" vs. "She is happy").
13. **Speech Acts:** The actions we perform when speaking, like requesting, questioning, or promising.
 - **Direct Speech Acts:** Directly stating something (e.g., "Give me the pen").
 - **Indirect Speech Acts:** Implied meaning (e.g., "Could you give me the pen?" is a request, not just a question).

Discourse Analysis

1. **Discourse Analysis:** The study of how language is used in larger units, like conversations or written texts, beyond individual sentences.
2. **The Origins of Discourse Analysis:** How the study of discourse developed over time, starting from analyzing larger chunks of text or speech.
3. **Critical Discourse Analysis:** A method of studying language that looks at how power, inequality, and social issues are reflected in language.
4. **Interpreting Discourse:** Understanding the meaning and social context behind spoken or written communication.
5. **Cohesion:** The way sentences in a text are linked together using words (like "and," "however," etc.) to make it flow smoothly.
6. **Coherence:** The overall sense of unity or logical connection that makes a text or conversation understandable.
7. **Discourse Typology: Spoken and Written, Formal and Informal:** Different types of discourse based on how it is used (spoken vs. written) and the setting (formal vs. informal).
8. **Discourse and the Sentence:** How larger pieces of communication (discourse) are made up of individual sentences and how they work together.
9. **Discourse as Process:** The idea that communication is an ongoing process where meaning is created and shared.
10. **Discourse as Dialogue:** Viewing communication as a back-and-forth exchange between speakers.
11. **Information Structure in Discourse:** How information is organized and presented in communication, like what comes first or what is emphasized.

12. **Knowledge in Discourse: Schemata:** The mental frameworks or structures people use to understand and interpret language.
13. **Conversation as Discourse Type:** Analyzing conversations as a specific type of discourse that has its own rules and structure.
14. **Conversation Analysis:** A study of the structure and patterns of talk in everyday conversations.
15. **Turn-taking:** The system by which people take turns when speaking in conversations.
16. **Conversational Principles: Cooperative:** The idea that speakers usually work together to make communication smooth and clear.
17. **Flouting the Cooperative Principle:** When speakers break the expected cooperative rules, often to convey meaning indirectly or sarcastically.
18. **Conversational Principles: Politeness:** The idea that speakers often adjust their language to be polite and avoid causing discomfort.

Critical Discourse Analysis (CDA)

1. **A Brief History of the CDA Group:** An overview of the development of Critical Discourse Analysis and the key people behind it.
2. **Considering Critical in Critical Discourse Analysis:** Focusing on how CDA looks at issues of power, inequality, and social justice.
3. **Considering Discourse in Critical Discourse Analysis:** How CDA examines language use to understand social and cultural contexts.
4. **Considering Analysis in Critical Discourse Analysis:** The methods CDA uses to break down and examine language.
5. **Different Approaches to CDA:** Various methods and perspectives within Critical Discourse Analysis.

Applied Linguistics

1. **Major Branches:** Different fields within applied linguistics, like language teaching, language policy, and language technology.
2. **Linguistics Applied:** How linguistic theories are used in real-life situations, like language teaching or translation.

Psycholinguistics

1. **Neurolinguistics:** The study of how language is processed in the brain.
2. **Language Areas in Brain:** Specific regions of the brain responsible for language (e.g., Broca's Area, Wernicke's Area).
3. **Broca's Area and Wernicke's Area:** Areas in the brain related to speaking (Broca's) and understanding language (Wernicke's).
4. **The Motor Cortex and the Arcuate Fasciculus:** Brain regions involved in speech production and connecting language areas.
5. **The Localization View:** The idea that specific brain areas are responsible for specific language functions.

6. **Tongue Tips and Slips:** Mistakes made while speaking, like saying the wrong word or mispronouncing.
7. **Slips of the Ear:** Mistakes made when hearing or understanding spoken language.
8. **Aphasia:** A condition where a person has difficulty with language due to brain injury.
9. **Types of Aphasia:** Different forms of aphasia, affecting speech, comprehension, or both.
10. **Dichotic Listening:** A test where different sounds are played into each ear to study how the brain processes language.
11. **The Critical Period:** The idea that there's an optimal time in life to learn language, usually early childhood.

Sociolinguistics

1. **The Standard Language and Vernacular Language:** The "official" language used in formal settings vs. everyday speech used by different communities.
2. **Accent and Dialect (Dialectology):** Differences in pronunciation (accent) and regional language variations (dialect).
3. **Pidgin and Creole:** Simplified languages that develop when people from different language backgrounds need to communicate, with a creole being a fully developed version.
4. **Diglossia and Polyglossia:** The use of different varieties of a language in different social situations (diglossia) vs. using multiple languages (polyglossia).
5. **Language and Culture:** The relationship between the way people speak and their cultural practices.

First Language Acquisition

1. **Acquisition and Stages of Acquisition:** How children naturally learn their first language and the stages they go through (e.g., babbling, one-word stage).
2. **Cooing and Babbling:** Early sounds babies make as they start to experiment with language.
3. **The One-Word Stage:** When babies start using single words to represent entire ideas.
4. **The Two-Word Stage:** When toddlers start combining two words together.
5. **Telegraphic Speech:** Simple sentences children use that leave out unnecessary words (e.g., "want cookie").
6. **Summary/Discussion:** A recap of how language develops in children.
7. **The Acquisition Process:** The process of learning language from birth onward.
8. **Developing Morphology:** Learning the structure of words (like adding "-ed" to form past tense).
9. **Developing Syntax:** Learning how to put words together in sentences.
10. **Forming Questions:** How children learn to ask questions.
11. **Forming Negatives:** How children learn to make negative statements.
12. **Developing Semantics:** How children learn the meanings of words and concepts.

Second Language Acquisition/Learning

1. **Second Language Acquisition and Learning:** The process of learning a language after the first one, either naturally or through formal study.
2. **Acquisition Barriers:** Challenges in learning a second language, such as age, motivation, or environment.
3. **Affective Factors:** Emotional factors, like motivation or anxiety, that affect language learning.
4. **Focus on Method:** The different approaches to teaching second languages (e.g., immersion, grammar-focused).
5. **Focus on the Learner:** Tailoring language teaching to the individual needs of the learner.
6. **Communicative Competence:** The ability to use language effectively in real-life situations.

Historical Linguistics

1. **The Family Tree Model:** A way of showing how languages are related through shared ancestry.
2. **Grimm's Law:** A rule explaining how certain consonants in Indo-European languages changed over time.
3. **The Comparative Method:** A way of comparing languages to find common ancestry and reconstruct past languages.
4. **The Wave Model:** A model of language change showing how features spread through groups of languages in waves.
5. **Language Change:** The way languages evolve over time.

Computational Linguistics

1. **What is Computational Linguistics?:** The study of using computers to process and analyze language.
2. **Processes and Methods of CL:** Techniques for handling language data using computers, like natural language processing.
3. **Morphological Processing:** Analyzing word structures with computers.
4. **Syntactic Processing:** Analyzing sentence structure with computers.
5. **Semantic Processing:** Analyzing meaning in language with computers.
6. **Application of CL:** Using computational linguistics in areas like search engines, translation, and AI.

Lexicography

1. **The Dictionary: Definition and History:** The study of dictionary creation, from defining words to compiling lists.
2. **Source Materials for Dictionaries:** The resources used to create dictionaries, like texts and corpora.
3. **Uses and Users of Dictionaries:** Who uses dictionaries and for what purpose (e.g., students, writers, translators).

4. **Corpora for Lexicography:** Large collections of text used to gather examples for dictionary definitions.
5. **Developments in Electronic Dictionary Design:** How digital dictionaries are created and used, with features like search functions.
6. **Linguistic Corpora and the Compilation of Dictionaries:** How linguistic data is used to build and update dictionaries.

Latest Trends of Research in Linguistics

1. **What is Linguistic Research or Research in Linguistics?:** The study of language, including its structure, use, and acquisition.
2. **Research Trends in Applied Linguistics:** The latest areas of study in applying linguistics to real-world issues.
3. **Current Trends in Linguistic Research Methodology:** New methods and approaches in the study of language.
4. **Research Trends in Linguistics in China, Japan, India:** How linguistic research is developing in these countries.
5. **Recent Progress in Applied Linguistics:** New advances in areas like language teaching and language technology.
