These notes included Important VU Exam

- ✚ All solved quizzes
- ✚ Frequently asked question
- ✚ Short question and Long question
- ✚ Guess papers

DISCLAIMER: Priority is given to the handout for good getting good mark and concept. B.Ed. is a professional degree focus on expertise and skills. It is experienced that many students got 60+marks by using this notes .but Author doesn't provide guarantee of full or passing mars you are only responsible for yourself. I hope I will provide the best material pray for me. always be happy and smiled.

Note: Question ka exatly koi gess nai huta better hy k books ko sequence sa read kr lia jae last day ko ya important questions ko fetch out kr k understand krlia jae.but chances huty hain sub ya obj koi 1 ma to 40 marks pkay hu he jaty.apko nichy q per k andaza hujaega k konsay q most reteated huty.

Handout syllabus: 23 to 45 lectures

Total Question 26 Subjective Question 16

Q1. What are critical characteristics of situated learning for reflective practice?

- Provide authentic context that reflect the way the knowledge will be used in real-life;
- Provide authentic activities;
- Provide access to expert performances and the modelling of processes;
- Provide multiple roles and perspectives;
- Support collaborative construction of knowledge;
- Provide coaching and scaffolding at critical times;
- Promote reflection to enable abstractions to be formed;
- Promote articulation to enable tacit knowledge to be made explicit;
- Provide for integrated assessment of learning within the tasks 5 marks

Q2. Write down seven dimensions that characterize school as learning organization? 5marks

Q3. What is importance of good communication of teacher in classroom?

When communication is effective, both the student and the teacher benefit. Communication makes learning easier, helps students achieve goals, increases opportunities for expanded learning, strengthens the connection between student and teacher, and creates an overall positive experience

Self Esteem

In general, people want to be heard. If a teacher shows interest in a student's opinions, that student will feel that their thoughts or ideas are appreciated. This increases self esteem and confidence. A confident student is less likely to second guess his answers on tests, and a self-assured student is more likely to speak up in class. Class participation leads to increased learning for the entire class.

Class Performance

Teachers who reward student communication and class participation will notice an improvement in overall class performance. A teacher can gauge the effectiveness of a lecture by student feedback. By asking questions, a teacher can determine if students were able to retain the imparted information. If there are a lack of responses from the class, it is likely that the students were unable to understand the lecture. This can lead to poor performance on exams.

Professional Growth

A degree of communication is required in every profession, and communication skills are necessary at even the most preliminary stages of career growth. For example, an applicant must be able to communicate her skills and abilities during an interview in order to acquire a job.

5marks

Q4. Write down the overview of the approach for reflective practice?

What are the benefits of reflective practice?

Roffey-Barentson and Malthouse (2009) introduce 10 useful 'benefits of reflective practice' (p 16) which are summarised below:

1. Improving your teaching practice

If you take the time to reflect on your teaching, and reflect on how different parts of what you do work well, where aspects of your teaching can be improved, and how problems which arise could be solved, that is bound to help you to improve your teaching.

2. Learning from reflective practice

There is a good range of evidence that purposeful reflection helps 'deep' learning take place, and for you as a teacher, it will help you to make connections between different aspects of your teaching and what goes on around your teaching. Reflective practice will help you gain new learning and use it in your teaching.

3. Enhancing problem solving skills

When starting off with reflecting on your teaching you may tend to concentrate on problems which arise. By carefully and honestly considering and analysing those problems, you will improve your own capacity to find solutions.

4. Becoming a critical thinker

Critical thinking is about 'thinking well', and 'taking charge' of your own thinking (Elder and Paul, 1994), and reflective practice will help you recognise and adjust what you think to take account of changes in circumstances, and by doing that help you to be better equipped to find solutions which work.

5. Making Decisions

As you reflect on your practice, you will find you need to make decisions about what to do (or not to do) next. You may well have a number of choices which you have to weigh up, and deciding which one to take can be difficult. If you regularly reflect on your teaching in depth, you are regularly going to come across the need to make decisions, but the results of your reflective practice will help you to make those decisions in a more informed, thoughtful and objective manner.

6. Improving your own organisational skills

You will notice as this section progresses that the benefits of reflective practice can reach into every aspect of your professional work as a teacher. If you are thinking carefully about what you are doing, identifying possible actions and choices, trying out solutions, and adjusting what you do to take account of the results, this involves a good deal of organisation. By breaking down issues and problems into steps or stages, you will get better at organising your time and your activity to concentrate on the important, 'solution-focussed' actions.

7. Managing personal change

Working in education involves managing regular, rapid, pressured and often confusing change, which can be one of the most difficult aspects of being a teacher. If you are using the techniques of reflective practice, which involves, calm, thoughtful, honest, critical and organised thinking and action, this should introduce a calming and less emotional response to that change. As reflective practice is itself focussed on seeking positive improvements and solutions, managing change more effectively should take place.

8. Acknowledging personal values

There will be things which take place within your professional situation as a teacher which you will wholeheartedly agree with, and others which will worry or alarm you. This is because they may agree or disagree with your own personal values such as what you believe in, and what you think is wrong or right. How these are affected by teaching will vary, but you will almost certainly come across major clashes of values as part of your work. Reflective practice is an excellent way of acknowledging and recognising that those values exist and have an effect, but which concentrates on helping you to choose approaches and actions which can help you to resolve those clashes without it adversely affecting the professional balance of your work as a teacher.

9. Taking your own advice

Teachers are often more critical of their own teaching than anyone else, and it could be possible for this to develop into an attitude about teaching which is negative and destructive. The techniques and approaches of reflective practice will place you in a position where you are an informed, positive agent in your own development and improvement and one where you can 'take your own advice' with a confidence that it is reflective, focussed and informed advice.

10. Recognising emancipatory benefits

If you reflect on the nine benefits of reflective practice which have so far been described, you will clearly see that this is a model of practice which represents the teacher as someone with influence over their own teaching and their own destiny as a teacher. This is what is at the heart of reflective practice, and as such it should help considerably to free you from some of the burdens which can weigh teachers down, and refresh your confidence and your teaching 5 marks

Q5. What is John's Smith framework for reflective practice?

Topic: 039 - From Theory to practice John Smyth's Framework for Reflection on action (1993) Smyth's framework takes the teacher through a number of phases

- A descriptive Phase
- A Reflective Phase
- An emancipator Phase The Descriptive Phase
- Descriptive accounts and narrative The Reflective Phase
- Reflective analysis against adopted theories
- Reflective analysis of the situation
- Reflective analysis of intentions The Emancipator Phase
- Critique of practice regarding conflicts distortion and inconsistencies
- Engagement in emancipatory and change processes
- Self-critique and emancipation

Smyth operationalizes these phases of reflection for teachers as a set of activities developed from question cues:

Activity: describe Cue: What did I do?

Smyth proposes reflection for teachers as a set of activities developed from question cues: **Activity: Inform (analysis)**

Cue: What does this mean?

Smyth proposes reflection for teachers reflection for teachers as a set of activities developed from question cues:

Activity: confront (self-awareness)

5marks

Q6. Being a teacher how will you explain vision and goal?

Differences between setting a goal and a vision. ... Most of us, often interchangeably, use the terms 'vision' and 'goals' to our own liking. Vision is the destination that one visualises and wants to achieve, but the path is unknown. This is where goals come into play. 3marks Q7. Why constant comparison is necessary in RP?

Definition. The goal of the Grounded Theory approach is to generate theories that explain how some aspect of the social world 'works.' The goal is to develop a theory that emerges from and is therefore connected to the reality the theory is developed to explain. 3 marks Q8. write down weaknesses/

disadvantages of peer observation?

Advantages

Both parties can get new ideas. It provides instant feedback.

- It causes the teacher being observed to re-think their lesson.

Disadvantages

- The observer is often biased and may give high marks to avoid confrontation.
- Is often only done once so there's no way to compare how the teacher has improved.
- It's often unreliable and unorganized. They're only observing one class and the time of day, class, being nervous, and more can affect the observation. In addition, it's usually not video taped, observers aren't trained, and the feedback form isn't valid.

3 marks

Q9. what are three properties of intelligence according to researcher?

Intelligence has been defined in many different ways including as one's capacity for logic, understanding, self-awareness, learning, emotional knowledge, planning, creativity and problem solving. It can be more generally described as the ability to perceive information, and to retain it as knowledge to be applied towards adaptive behaviors within an environment or context.

Intelligence is most widely studied in humans, but has also been observed in non-human animals and in plants. Artificial intelligence is intelligence in machines. It is commonly implemented in computer systems using program software.

Within the discipline of psychology, various approaches to human intelligence have been adopted. The psychometric approach is especially familiar to the general public, as well as being the most researched and by far the most widely used in practical settings

3marks

Q10. How teacher improve the reflective teaching practice in classroom?

Reflective teaching is a personal tool that teachers can use to observe and evaluate the way they behave in their classroom. It can be both a private process as well as one that you discuss with colleagues. When you collect information regarding what went on in your classroom and take the time to analyze it from a distance, you can identify more than just what worked and what didn't. You will be able to look at the underlying principles and beliefs that define the way that you work. This kind of self-awareness is a powerful ally for a teacher, especially when so much of what and how they teach can change in the moment. Reflective teaching is about more than just summarizing what happened in the classroom. If you spend all your time discussing the events of the lesson, it's possible to jump to abrupt conclusions about why things happened as they did.

Reflective teaching is a quieter and more systemic approach to looking at what happened. It **requires patience, and careful observation of the entire lesson's experience.** Learning how to learn, as this Udeemy course details in full, requires intuition and practice.

3marks

Q11. Define Tacit knowledge?

Tacit knowledge (as opposed to formal, codified or explicit knowledge) is the kind of knowledge that is difficult to transfer to another person by means of writing it down or verbalizing it. For example, that London is in the United Kingdom is a piece of explicit knowledge that can be written down, transmitted, and understood by a recipient. However, the

ability to speak a language, knead dough, play a musical instrument, or design and use complex equipment requires all sorts of knowledge that is not always known explicitly, even by expert practitioners, and which is difficult or impossible to explicitly transfer to other users Tacit knowledge - personal; wisdom and experience; context-specific; more difficult to extract and codify. 2marks

Q12. three example of kinesthetic learning?

Building, imitating, performing

this means you learn by touching and doing. You will:

- Need lots of breaks and will want to move around
- Speak with your hands and gestures
- Remember what was done, but have difficulty with what was said or seen
- Learn through doing activities
- Make comments like: % "How do you feel about this?" % "Let's move forward together." % "Are you in touch with what I am saying?"

2marks

Q13. Describe kolb's theory of experiential learning?

David Kolb published his learning styles model in 1984 from which he developed his learning style inventory.

Kolb's experiential learning theory works on two levels: a four stage cycle of learning and four separate learning styles. Much of Kolb's theory is concerned with the learner's internal cognitive processes.

Kolb states that learning involves the acquisition of abstract concepts that can be applied flexibly in a range of situations. In Kolb's theory, the impetus for the development of new concepts is provided by new experiences.

"Learning is the process whereby knowledge is created through the transformation of experience" (Kolb, 1984, p. 38).

The Experiential Learning Cycle

Kolb's experiential learning style theory is typically represented by a four stage learning cycle in which the learner 'touches all the bases':

1. Concrete Experience - (a new experience of situation is encountered, or a reinterpretation of existing experience).
2. Reflective Observation (of the new experience. Of particular importance are any inconsistencies between experience and understanding).
3. Abstract Conceptualization (Reflection gives rise to a new idea, or a modification of an existing abstract concept).

4. Active Experimentation (the learner applies them to the world around them to see what results).

Q14. Write down peer supervision and reflective team?

Peer supervision usually refers to reciprocal arrangements in which peers work together for mutual benefit where developmental feedback is emphasised and self directed learning and evaluation is encouraged 2marks

Q15. Write down the purpose of Experimentation?

The purpose of an experiment is to test a hypothesis and draw a conclusion. When a scientist has a question about the world or a fact that they wish to prove, they experiment. 2marks Q16. Elaborate the Guidelines for conducting a pre-observation conference?

A Pre-Observation Conference. In her framework for teaching, ASCD author Charlotte Danielson discusses how understanding the various levels of performance—what teaching looks like at an unsatisfactory, a basic, a proficient, and a distinguished level—can help educators analyze their own performance. 5marks.

Paper 2:

Type of reflection .. ?

There are three main types of reflection offered by Farrell (2007):

1) Reflection-in-action is when teachers are in the classroom teaching in their everyday routine knowledge. Given that teachers carry out such actions everyday they have to employ a kind of knowing-in-action Schon (1983). Knowing-in-action is essential since teachers in KSA continue teaching in the classroom without the thought of our actions or producers we follow. What teachers do in the classroom is unconscious since they are unable to describe what they do and it is quite difficult according to Schon (1983) who indicated that such information frequently is at the unconscious tacit and universalized stage of our feelings (Clark & Yinger, 1979). On the other hand, if something happened in class like a faulty application, teachers can employ reflection-in-action which undergoes a certain process (See Schon, 1983).

2) Reflection-on-action is less problematic since it is viewed as teachers' thoughts and retrospective study of their presentation (Schon, 1983). Russell & Munby (1992:3) describe it succinctly as the 'systematic and deliberate thinking back over one's actions'. Another definition which involves thinking back on what teachers have done to discover how knowing-in-action might have contributed to unexpected action (Hatton and Smith, 1995)

3) Reflection-for-action is different from the other two types since it is proactive in nature (Farrell, 2007). Killon and Todnew (1991:15) disagree with this idea as this type of reflection is the product of the prior types of reflection.

2. Observable teaching characteristic?

1. Begins class promptly and in a well-organized way.
2. Treats students with respect and caring.
3. Provides the significance/importance of information to be learned.
4. Provides clear explanations. Holds attention and respect of students.. ..practices effective classroom management.
5. Uses active, hands-on student learning.

6. Varies his/her instructional techniques.

7. Provides clear, specific expectations for assignments.
8. Provides frequent and immediate feedback to students on their performance.
9. Praises student answers and uses probing questions to clarify/elaborate answers.
10. Provides many concrete, real-life, practical examples.
11. Draws inferences from examples/models.. ..and uses analogies.
12. Creates a class environment which is comfortable for students.. ..allows students to speak freely.
13. Teaches at an appropriately fast pace, stopping to check student understanding and engagement.
14. Communicates at the level of all students in class.
15. Has a sense of humor!
16. Uses nonverbal behavior, such as gestures, walking around, and eye contact to reinforce his/her comments.
17. Presents him/herself in class as "real people."
18. Focuses on the class objective and does not let class get sidetracked.
19. Uses feedback from students (and others) to assess and improve teaching.
20. Reflects on own teaching to improve it.

3. Dewey method?

Step One: Define the Problem

Step Two: Analyze the Problem

Step Three: Determine Criteria for optimal Solution

Step Four: Propose Solutions

Step Five: Evaluate Proposed Solution

Step Six: Select a Solution

Step Seven: Suggest Strategies to Implement the Solution

4. Dewey theory..?

❖ Experiential education:

- Dewey focused his concept of "instrumentalism" in education on "learning by doing or hands-on learning", which means to learn not only by the theory, but also by the practice. "Instrumentalism" is a theory of knowledge created by Dewey in which ideas are seen to exist primarily as instruments for the solution of problems encountered in the environment.
 - Dewey thought that people learn the best through experience. He thought knowledge could be falsified. Thus, It needed to be consistently challenged and experimented on.
- He emphasized on inquiry based education

6

❖ The school's Role:

- "The school is simply that form of community life in which all those agencies are concentrated

that will be most effective in bringing the child to share in the inherited resources of the race, and to use his own powers for social ends."

- Dewey stressed the importance of education in school not only as a place to gain content knowledge, but also as a place to learn how to live.
- He believed that students should be actively involved in real-life tasks and challenges. (Neill, 2005)

❖ Role of Curriculum:

- Dewey advocated for an educational structure that makes a balance between the child and the curriculum, that is to say, delivering knowledge while also taking into account the interests and experiences of the student.
- He also rejected curriculum-centered view of education rather than student centered education.
- Active curriculum should be integrated, rather than divided into subject-matter segments (Brewer, 43)
- Flexible and Changeable in according to Child's Interest.
- Reflect social life and social activities- utilities.
- The Teacher's Role:
 - He believed that the teacher's role should be that of facilitator and guide since the teacher becomes a partner in the learning process who leads students to independently discover meaning within the subject area.
 - Teachers are responsible for achieving the goals of the school, but the specific topics to be studied to meet those goals, cannot be determined in advance because they should be of the interest of the children (Brewer, 43).

Learner's past experience should be taken into account the teaching-learning process, as well as the environment

"Education is not preparation for life; education is life itself. Education, therefore, is a process of living and not a preparation for future living."

-John Dewey

5. Interpersonal or Intrapersonal?

Intrapersonal learning through feeling, values and attitudes. This is a decidedly affective component of learning through which we place value on what we learn and take ownership for our learning

Interpersonal learning through interaction with others. Not being simply talkative or overly social. This intelligence promotes collaboration and working cooperative with others

6. As a teacher how you solve the problem and guide grade 1-5..?

Problem-solving is a process—an ongoing activity in which we take what we know to discover what we don't know. It involves overcoming obstacles by generating hypo-theses, testing those predictions, and arriving at satisfactory solutions.

Problem-solving involves three basic functions:

1. Seeking information
2. Generating new knowledge
3. Making decisions

8. Mentor qualities?

Consider these seven key qualities that can help you become an effective mentor.

- **Ability and willingness to communicate what you know. ...**
- **Preparedness. ...**

- Approachability, availability, and the ability to listen. ...
- Honesty with diplomacy. ...
- Inquisitiveness. ...
- Objectivity and fairness. ...
- Compassion and genuineness.

9. Effective teacher?

According to Harry Wong, there are three main characteristics of an effective teacher:

- Has positive expectations for student success
- Excels at classroom management
- Designs lessons for mastery

Since effective teachers trust that their students are capable of the tasks set before them, positive expectations are the cornerstone of their beliefs. Effective teachers know that students can achieve their goals if given proper, differentiated instruction and guidance.

Effective teachers run their classrooms efficiently. They have set procedures for handling daily tasks that could otherwise become overwhelming and consume instructional time. Effective teachers are able to identify what needs to be done and find ways to consistently achieve order. They understand that the greatest discipline/management problems stem from lack of procedures. If teachers can address potential difficulties ahead of time, these situations can easily be avoided. Effective teachers also know the content of their subject(s) and what their students need to learn. They use this knowledge to design lessons for mastery. Effective teachers are familiar with national and state standards for the content, and are able to examine data to understand the strengths and weaknesses of their students. Effective teachers teach the student, not the subject. In his book *Qualities of Effective Teachers*, James Strange defines five specific, critical areas of teacher effectiveness:

- The teacher as a person
- Classroom management and organization
- Organizing for instruction
- Implementing instruction
- Monitoring student progress and potential

10. What are three properties of intelligence according to researcher?

Intelligence has been defined in many different ways including as one's capacity for [logic](#), [understanding](#), [self-awareness](#), [learning](#), [emotional knowledge](#), [planning](#), [creativity](#) and [problem solving](#). It can be more generally described as the ability to [perceive information](#), and to retain it as [knowledge](#) to be applied towards adaptive behaviors within an environment or context.

Intelligence is most widely studied in [humans](#), but has also been observed in non-human animals and in plants. [Artificial intelligence](#) is intelligence in machines. It is commonly implemented in [computer systems](#) using [program software](#).

Within the discipline of [psychology](#), various approaches to human intelligence have been adopted. The [psychometric](#) approach is especially familiar to the general public, as well as being the most researched and by far the most widely used in practical settings

1. Define contextualized reflection?

.This ensures that the reflection activities or topic are appropriate and meaningful in relation to the experiences of the teacher 2 marks

2. What is meant by IPE?

interprofessional education (IPE) is an important step in advancing health professional education for many years and has been endorsed by the Institute of Medicine as a mechanism to improve the overall quality of health care 2 marks

3. Define grounded theory?

Focus on generating theoretical ideas (or hypotheses) from experiences rather than having these specified beforehand. Grounded theory is inductively derived from the study of the phenomena it represents 2 marks 4. What are two professional relations that teachers have?

the teacher as manager of instruction;

the teacher as caring person;

the teacher as expert learner; and the teacher as cultural and civic person

2 marks

5. Define inquiry ?

Inquiry-based learning (also enquiry-based learning in British English) starts by posing questions, problems or scenarios—rather than simply presenting established facts or portraying a smooth path to knowledge. The process is often assisted by a facilitator 2 marks

6. Enlist the steps of reflection practitioner?

A 'reflective practitioner' is someone who, at regular intervals, looks back at the work they do, and the work process, and considers how they can improve. They 'reflect' on the work they have done.

They are not happy to carry on at the current standard, they want to improve, they do not believe in the saying, 'if it ain't broke don't fix it'.

Everyone should be a 'reflective practitioner', in particular, as in my case, when they are writing a dissertation. You need to learn from the experiences, and mistakes of others, you need to look at what you are doing and how others are doing the same thing; can anything be improved? Can anything be done better?

2 marks

7. Write down the choices for teacher in differentiated approach?

To help each individual student reach his fullest potential, teachers should try differentiated instruction strategies.

12

These educational techniques accommodate each student's learning style, readiness, and interest. Differentiated instruction strategies use a variety of educational methods to teach students the same information. These techniques may also require teachers to teach content at varying levels based on

students' readiness. The goal of differentiated instruction strategies is to ensure that all students are engaged in the learning process by providing tasks that match each individual's needs.

Teachers differentiate instruction through a variety of different ways: Flexible grouping, learning centers, and independent study, to name a few. Here we will take a look at each of them

3 marks

8. Explain role of teacher as professional in your own words?

The roles and responsibilities of a teacher

- Learning styles
- Planning a course
- Planning a lesson
- How people learn Learning from Reflection
- What do you know about and how confident are you about:
- Lifelong learning
- Communication skills
- Presentation skills
- Demonstration skills
- Questioning and explaining
- Using a range of teaching methods
- Designing and uses resources
- Using ICT
- Assessing learning
- Reflection
- Subject knowledge and skills 3 marks

9. Being a teacher how will you explain vision and goals?

Differences between setting a goal and a vision. ... Most of us, often interchangeably, use the terms 'vision' and 'goals' to our own liking. Vision is the destination that one visualises and wants to achieve, but the path is unknown. This is where goals come into play. 3 marks

10. Write down three purposes for action research?

- Basic and applied research
- The primary purpose of basic research is the extension of knowledge

The primary purpose of applied research is the solution of an immediate, practical problem 3 marks

11. Write down the key feature of becoming reflective procedure?

Teaching is a complex activity, in which decision are made in complex contexts.

In addition, there are theoretical perspectives to consider and the process of reflection brings all these aspects together.

There are some key features of reflection that are widely considered

1. Reflection results in learning- through changing ideas and your understanding of the situation.
2. Reflection is an active process and is more than thinking or thoughtful action
3. Reflection involves problematizing that practice is not without dilemmas and issues.
4. Reflection is not a linear process but a cyclical one where reflection leads to the development of new ideas which are then used to plan the next stages of learning.

5. Reflection encourages looking at issues from different perspectives, which helps you to understand the issue and scrutinize your own values, assumptions and perspectives.

Therefore when the term critical reflection is used, it refers to a combination of the analytical, questioning (Or critical thinking) and reflective approaches 5 marks

12. Elaborate guidelines for conducting pre-observation conference?

Pre-Observation Conference. In her framework for teaching, ASCD author Charlotte Danielson discusses how understanding the various levels of performance—what teaching looks like at an unsatisfactory, a basic, a proficient, and a distinguished level—can help educators analyze their own performance. 5 marks

13. Write brief note on Kolb's learning style?

Kolb's learning theory sets out four distinct learning styles (or preferences), which are based on a four-stage learning cycle. (which might also be interpreted as a 'training cycle'). In this respect Kolb's model is particularly elegant, since it offers both a way to understand individual people's different learning styles, and also an explanation of a cycle of experiential learning that applies to us all.

Kolb includes this 'cycle of learning' as a central principle his experiential learning theory, typically expressed as four-stage cycle of learning, in which 'immediate or concrete experiences' provide a basis for 'observations and reflections'. These 'observations and reflections' are assimilated and distilled into 'abstract concepts' producing new implications for action which can be 'actively tested' in turn creating new experiences.

Kolb says that ideally (and by inference not always) this process represents a learning cycle or spiral where the learner 'touches all the bases', ie., a cycle of experiencing, reflecting, thinking, and acting. Immediate or concrete experiences lead to observations and reflections. These reflections are then assimilated (absorbed and translated) into abstract concepts with implications for action, which the person can actively test and experiment with, which in turn enable the creation of new experiences.

Kolb's model therefore works on two levels - a four-stage cycle:

1. Concrete Experience - (CE)
2. Reflective Observation - (RO)
3. Abstract Conceptualization - (AC)
4. Active Experimentation - (AE)

and a four-type definition of learning styles, (each representing the combination of two preferred styles, rather like a two-by-two matrix of the four-stage cycle styles, as illustrated below), for which Kolb used the terms:

1. Diverging (CE/RO)
2. Assimilating (AC/RO)
3. Converging (AC/AE)
4. Accommodating (CE/AE) 5 marks

14. What are five dy function of a team in a pyramid model presentation by lencioni?

Pyramid Diagrams helps you to visualize the relationship building blocks as a triangle divided into horizontal slices, and may be oriented up or down. Labelled slices represent a hierarchy. Pyramids are used in marketing presentations to show and analyze hierarchy levels.

Five level pyramid model

A five level pyramid model of different types of Information Systems based on the information processing requirement of different levels in the organization.

The first level represents transaction processing systems to process basic data .

The second level represents office support systems to process information in office.

The third level represents management information systems to process information by managers.

The fourth level represents decision support systems to process explicit knowledge.

The fifth level represents executive information systems to process tacit knowledge.

15. **What is the nature and purpose of professional role of teacher?** 5 marks

16. What is the importance of action research for reflective practitioner ? 5 marks

- Ground theory.

What is Grounded Theory?

Focus on generating theoretical ideas (or hypotheses) from experiences rather than having these specified beforehand. Grounded theory is inductively derived from the study of the phenomena it represents.

Core Elements of Grounded Theory

Inquiry shaped by the aim to discover social & social psychological processes.

Create analytic codes and categories from the data Data collection and analysis proceed simultaneously.

Analytic process employed prompts theory discovery and development rather than verification of pre-existing theories = Inductive

Theoretical sampling refines, elaborates and exhausts conceptual categories.

Systematic application of grounded theory analytic methods will progressively lead to more abstract analytic levels.

- attributes of Dewey model,

Topic: 025 - Foundation Models 1: John Dewey What is reflective practice?

It is ongoing, dynamic process of thinking honestly, deeply and critically about all aspects of professional practice What is reflective practice?

It occurs spontaneously as well as in planned reflection activities

Reflective practice leads to action Routine action Vs Reflection Action

Dewey's model is based on the fundamental difference that he sees between routine action-guided primarily by tradition, instruction and imitation (quoted in Furlong and Maynard: 31)

Which action amount to prejudices that is pre-judgments proper that rest upon a survey of evidence". (Dewey 1910: 4-5), and Reflection action.

Reflective action is instead based on active, persistent and careful consideration (1910: 6), based on the need to solve a problem. For Dewey, it is in problem solving that we find "the steadying and guiding factor in the entire process of reflection and without which the course of suggestions flows on at fandum.

Reflection as Rationality

Teacher John Dewey, saw reflection as a further dimension of thought, and as such in need of education: while we cannot learn or be taught to think, we do have to learn to think well, especially acquire the general habit of reflection" (Dewey, 1933).

For Dewey, reflection is a rational and purposeful act, an active persistent and careful consideration of any belief or supposed form of knowledge in the light of the grounds that support it and further conclusions to which it leads it includes a conscious and voluntary effort to establish belief upon a firm basis of evidence and rationality (Dewey 1933)

Reflection as rationality

Interestingly, from a modern educational perspective, Dewey's reference to different forms of belief and knowledge may reveal his willingness to apply objective rationality to more affective and emotional concerns.

Dewey's 5 Stage Model

1. We identify a problem that is perplexing and felt
2. We observe and refine the identified problem to create a fuller understanding
3. We develop a hypothesis or an understanding about the problem, its origins and possible solutions.

We subject the hypothesis to scrutiny and reasoning, we test the hypothesis or understanding in practice

4. Dewey placed great emphasis on reflective thought and saw it as an important part of a cycle that enabled us to learn from experience.

5 .He believed that reflective thought began when we found ourselves having an experience that raised some difficulties or dilemmas.

Characteristics of higher standard school,

1. A Clear and Shared Focus
2. High Standards and Expectations for All Students
3. Effective School Leadership
4. High Levels of Collaboration and Communication
5. Curriculum, Instruction, and Assessments Aligned with State Standards
6. Frequent Monitoring of Learning and Teaching
7. Focused Professional Development
8. Supportive Learning Environment
9. High Levels of Family and Community Involvement

socratic method ,

A useful strategy for developing teacher identity through reflective practice is the Socratic Method. Socrates developed this approach to questioning reality based on thorough understanding of skills for questioning and cross examining evidence in order to arrive at the truth of a situation and a reflective practitioner can use this approach to help the reflective approach. It is a process of developing thinking skills and the ability

to reason deeply and thoroughly. The focus is on giving students questions, not answers. It is an effective thinking

tool and help promote an inquiring, probing mind by continually probing into the subject with questions. Fortunately, the abilities we gain by focusing on the elements of reasoning in a disciplined and self-assessing way, and the logical relationships that result from such disciplined thought, prepare us for Socratic questioning.

The six steps in Socratic Questioning are:

- Which topic to choose to question
- What examples can we find to help us explore the experience?
- Which example suits the topic best?
- Can you explain the examples in detail? (Can be in verbal or written form)
- Examining the underlying principles
- How to make broad understanding from a specific question? This is also known as regressive abstraction.

It is useful for the reflective practitioner to see that the Socratic Method continuously relies on questioning and answering back and forth and through question and answer; the reflective practitioner will begin to understand and interpret situations and experiences very deeply.

- **situated learning**

Learning and development for RP does not happen in isolation and there is a notion around modelling and mentoring in school where learning is considered to be situated. This is in a sense looking at the formal integration of learning from the work place. It can be looked at learning to teach and teaching to learn. But this means for RP that teacher is not only a teacher but a learner and as such learning to think critically and to question the practice to explore new principles. Situated learning implies learning is not simple transfer of knowledge or skill from one individual to another indeed transfer of knowledge is quite inadequate. It is better to think of 'situated learning' process as a transitional process of boundary- crossing to become an expert in order to achieve high level of performance. So teachers as RP need to think like a teacher to look at teaching from a perspective of a learner. This situates learning within a practice. There are certain stages that we can consider:

Stage 1: Implicit modelling of strategies and values. This point the individual is looking at modelling behaviors expressing certain values.

Stage 2: Much more explicit modelling of reflective learning and change in practice.

Stage 3: Linking practical wisdom to abstract theory

Stage 4: Reconstruction by teachers in the classroom through new strategies and technologies.

21

Situated learning focuses in a holistic way on teacher learning enabling them to think critically and originally,

question existing practices and exploring ideas and new principles resonance with Loughran's learning to teach and teaching to learn. This is through situated learning that the RP

can make strong connections between theory and practice. This can be looked as a very powerful tool for RP.

Paper 5:

Define Reflective practice...

The place of Reflective Practice in Teaching What is Reflective Practice?

- Teaching should value reflection and evaluation of their own practice and their continuing professional teachers.
- There is one quality above all that makes a good teacher-the ability to reflect on what, why and how we do things and to adopt and develop our practice.
- Most teachers spend time thinking about what they did in class but they don't always take it a step on their actions and make plans to do things differently.
- What is the implication of this for reflective practice?
- In a professional setting, reflection is:
 - Deliberate
 - Purposeful
 - Structured
- A process which links theory to practice
- Deep learning.
- John Moon says:
 - "Reflection is a form of mental processing that we use to fulfill a purpose or achieve some anticipated outcome".
 - applied to gain a better understanding of relatively complicated or unstructured ideas and is largely based on the reprocessing of knowledge, understanding and possibly, emotions that we already possess." (Moon, 2005:1)

Questioning of quo state

Define reflective practice

Reflective practice is the habit of inquiring and investigating a problem situation in order to understand how to frame a solution. Reflective practice is a way of studying your own experiences to improve the way you work. It is very useful for health professionals who want to carry on learning throughout their lives. The act of reflection is a great way to increase confidence and become a more proactive and qualified professional

Define action research

Role of teacher as professional

Reflections on a teacher's professional role encompasses contributions to extracurricular activities, to whole-school initiatives and to the corporate life of a school. The idea of living out the ethos of a particular school and helping to shape it, is at the heart of rather special role of being a reflective practitioner

Sugrat sahab ka method

7. Boud Model

to the experience and attending to feelings. • The strength of this model is it addresses emotions. • Returning to the experience and attending to feelings. • The strength of this model is it addresses emotions. Returning to the experience – recall and detail of the salient points. Attending to – connecting with feelings – using helpful feelings and removing or containing obstructive ones. Evaluating Experience – re-examining the experience in light of one's intent and existing knowledge. The Importance of Emotion • Boud is concerned about the role emotion plays in blocking or facilitating reflective processes. • In this way, reflection is essentially a private process where emotional influences - such as avoidance of an area of thought - can steer the process of reflection more strongly than any other influence.

8. Purpose of action plan

Action plans sum up anything you need to know and do to improve for next time. • Perhaps you feel that you need to learn about something or attend some training. For example In future, I will ensure that I build up a relationship with colleagues. I am working alongside several different teachers and I intend to speak to each of them about my worries about students' behaviour. I have already had a useful conversation with one teacher and together we have developed a programme of team-teaching for the next few weeks so that I do not feel so pressurised. • I plan to do this with the other class teachers, as it will help them to understand how

I feel. I also need to speak to colleagues more often about how they feel, as I think I will be able to learn from them. In terms of training, I have booked onto a behaviour management workshop. •

9. How to become reflective practitioner?

10. Appreciative Inquiry

Appreciative Inquiry (AI) is the study and exploration of what gives life to human systems when they function at their best • This approach to personal change and organizational change is based on the assumption that questions and dialogue about strengths, successes, values, hopes, • An Introduction and dreams are themselves transformational. • AI simply put... • If we continue to search for problems, we will continue to find problems • If we look for what is best and learn from it, we can magnify and multiply our success •

Gibbs model Socratic method Supervision waly sy 2 questions thy Statys quo questioning ke importance

PDP

PDP is a way of recording, reflecting on and writing about the practical outcomes of experiences and then reflecting on them through a writing process. It's a very personalized record of one's career or experiences and can be used for cataloging of career development. It, therefore, becomes a very useful means of updating a curriculum vitae and as a record can be checked back on the skills and knowledge acquired over the years.

action research k purpose

John model k kch aya tha Structured reflection Self reflection

Critical thinking

Critical thinking gives a comprehensive view of a situation by looking at it from various perspectives and essentially the ultimate goal is quality. The goal of critical thinking is to establish an additional level of thinking to our thinking, a powerful inner voice of reason, to monitor and assess in order to re-constitute in a very meaningful way and understand our responses.

Colleagues k dth relation

Reflecting on Professional roles leads teachers to consider their professional relationships with pupils and what is regarded as 'professional' must therefore be linked with inaction responsibilities. Reflective practitioners must be seen to treat pupils with respect and fairness. This underlies the professional relationships that we have. Teachers need to be consistent with their approaches so they can be viewed as professionals and this underlies a notion that they have a particular stance which is about 'unconditional positive regard' for students as learners. This notion requires reflective practitioner to operate with a working knowledge of students' background, their social and cultural backgrounds, their experiences and interests as they move through school and this is not just the simple knowledge to acquire. It is complex in nature because our students are always growing and their culture influences this development and therefore, any relationship that teachers have needs to reflect this development and change. It is important for a teacher to understand this because it helps her/ him to interpret a particular situation the student might be facing and then learning ways to tackle it. For professionals, these concerns direct their focus and role. One important role, the teacher needs to play is the role of a mentor. A mentor is somebody who is working along-side students in the classroom, supporting and encouraging vast challenges and cheer

leading the successes of students. The teacher also take on the role of parents in classroom. They reflect on their responsibilities of care, nurture and support. Another role is teacher as professional in action is to work as a participant observer. In this way, their professionalism can grow and the objectivity about their professional role can support the professional relationships they have with students. Teacher as carer in the classroom. The professional relationship that teachers have with students is that they are not only teaching the subject but needs to understand their needs and how they learn. Caring for students leads to better learning process.

Pupil k sth relation

work based learning

There are many words associated with work- based learning i.e. CPD, work related learning, professional development, learning through work etc. A spectrum occurs in terms of work based learning. If we look closely at the continuum, it shows two perspectives

- Narrow perspective*
- Broad perspective*

The narrow perspective talks about learning in the work place and is driven by employer needs and motivations rather than individuals. The broader perspective shows learning relates to work and is driven by individuals not by employer. So work based learning is complex in nature and has the ability to extend the knowledge and abilities of teachers. Work based learning helps teachers become better

reflective practitioner and can be formal or informal in nature. It is about improving performance from a personal individual perspective. It can be very much about developing skills in a new work setting. It is very much about investing in learning to bring knowledge to work place.

Grounded theory

Jhoun model

Johns model for structured reflection can be used as a guide for analysis of a critical incident or general reflection on experience. • This would be useful for more complex decision making and analysis • Johns supports the need for the reflective practitioner to work with a supervisor throughout their learning experience. • He refers to this as guided reflection, and recommends that teachers use a structured diary. • Johns considered that through sharing reflections on learning experiences, greater understanding of those experiences could be achieved than by reflection as a lone exercise

Stage 1: Describe the event/experience What happened? Who was involved? What part did you/others play? What was the result? Stage 2: Thinking and feeling What was significant about this experience to me? What was I thinking and feeling during the experience? What was I trying to achieve? How do I feel about the outcome of the event? Stage 3: Evaluation What was good and bad about the experience? What were the consequences of my action/actions of others? Stage 4: Analysis What sense can I make of the situation? What factors (e.g., values, assumptions, meaning perspective, experiences) influenced my feelings, thoughts, and actions? What sources of knowledge influenced or should have influenced my actions? How did others feel and how do I know? What could I have done differently? What would be the consequences of those other actions? How do I now feel about the experience? What have

I learned about my practice/myself/my organizations? What would I do now in a similar situation? What factors might get in the way of me applying my learning from the experience. Johns
