Final February 2020

Define HCI in your own words? 2 marks

HCI (human-computer interaction) is the study of how people interact with computers and to what extent computers are or are not developed for successful interaction with human beings

What lacks in old versions of e- learning models? 2 marks

Communication, collaboration and exchange of ideas lacked in the older version of e-learning

Define thinking process? 2 marks

Thinking is a non-linear, iterative process that teams use to understand users, challenge assumptions, redefine problems and create innovative solutions to prototype and test

How Narratives helps us? 3 marks

1. Better memorization/memory
2. Rich understanding
3. Triggering complex and larger in number mental operations when the student stumbles upon the same concept later.

Cognitive Presence? 3 marks

when students start thinking in classroom the teacher must communicate his expectations to the students to promote critical thinking.

Steps to Create Cognitive Presence:

- Create a triggering event
- Explore the problem
- Integrate new ideas and meanings
- Come to a resolution

OR

Cognitive presence: is the extent to which learners are able to construct and confirm meaning through sustained reflection and discourse (Garrison, Anderson, & Archer, 2001).

How can we reduce drop outs rates and attract students? 3 marks

- In Pakistan 20-30 lac students reach high school.
- 30-50 lacs drop out and don't reach high school.

While 40% of children are going to school the rest 60% who are majority are not going to school. **Students can be attracted to school by making school environment attractive, meaningful content should be taught to reduce the drop out rates**. The technique to standardize education for all is not applicable. But for the group of students who are diverse and to control the drop outs, education needs to ne centralized. While customizing, it is necessary to think that how technology or pedagogical skills can be implemented.

How can technology reach the under served educational institutes? 3 marks

With the emergence of smart phones, eBook readers, Internet and low-cost computers, as well as solar electricity, cell phone access, and other technologies, comes the opportunity to provide education to assist individuals and communities in places under-served by traditional educational institutes. Technology and other innovations enable educational design and delivery to be adapted to the needs and environment of students enrolled in Open and Distance learning (ODL) and traditional educational programs. Thus, technology can also help programs shift to a 'learner-entered' approach to education.

5 disadvantages of VU Model 5 marks

1. No instant feedback
2. Difficult to update courses after a certain period of time
3. No interactivity during the lecture
4. No collaboration
5. Lacks social presence

(Page 81 handouts)

Why students should be taught with daily life experiences for learning 5 marks

We need to provide the students with daily life experiences for learning, so that they can be involved both physically and emotionally in learning. Problems in real life do not have a black and white solution. Teachers must also keep in mind that different students have different levels of learning. Such type of teaching and

learning process follows 4C Model. In this model following should be taken into account:
- Context: Present a real life story, problem or scenario in a context
- Challenge: Incrementally, make the problem a challenge.
- Choices: Let the students explore the choices that they have.
- Consequences: Allow students to think critically about the consequences of adopting each choice.

In short, a teacher must take into account the following:
- Critical thinking
- Context
- Challenge
- Choices
- Individual Pace of Learning
- Instant Feedback: Rapid and frequent feedback helps students achieve their learning goals
