

IT430 Current Paper

#2023

By MR $\phi h \bar{a} h \bar{z}$

PIPEDIA:

PIPEDIA stand for Personal Information Protection and Electronic Documents

2. ACH:

ACH stands for Automated Clearing House. It's a network used for electronic financial transactions in the United States. ACH processes large volumes of credit and debit transactions in batches.

3. Downstream activities:

In a business context, downstream activities refer to processes or tasks that occur after the initial production of goods or services. This can include distribution, marketing, sales, and customer support.

4. Apache and IIS:

Apache and IIS are both web server software used to host websites and serve web content. Apache HTTP Server (commonly referred to as Apache) is open-source software, while IIS (Internet Information Services) is developed by Microsoft.

5. Cipher suite:

A cipher suite is a combination of cryptographic algorithms and protocols used to secure network communications. It includes algorithms for key exchange, encryption, and authentication.

6. OLAP:

OLAP stands for Online Analytical Processing. It's a technology used to perform complex multidimensional analysis of data. OLAP databases are optimized for querying and reporting, often used in business intelligence.

7. Support and confidence in data mining:

Support and confidence are measures used in association rule mining, a technique in data mining. Support refers to the frequency of occurrence of a specific itemset in a dataset, while confidence measures the likelihood of one item being purchased when another item is purchased.

8. ID3 Algorithm:

ID3 (Iterative Dichotomiser 3) is a decision tree algorithm used for classification in machine learning. It's used to create a decision tree that best splits data based on attributes to make accurate predictions.

9. CRM:

CRM stands for Customer Relationship Management. It's a strategy and technology for managing and analyzing interactions with customers and potential customers throughout their lifecycle with a company.

10. Major Global Issues of E-commerce:

Some major global issues in e-commerce include data privacy and security, cross-border regulations, intellectual property protection, digital divide, and payment fraud.

11. Threat of New Entrants:

The threat of new entrants is one of Porter's Five Forces, a framework used to analyze industry competition. It refers to the risk of new companies entering a market and potentially eroding profits for existing companies.

1. Advantages of E-Commerce:

E-commerce, or electronic commerce, offers several advantages, including:

- Global Reach: E-commerce allows businesses to reach a global audience without geographical limitations.
- Convenience: Customers can shop and make transactions 24/7 from the comfort of their homes.
- Reduced Costs: E-commerce eliminates the need for physical storefronts and reduces operational costs.
- Personalization: E-commerce platforms can offer personalized recommendations based on customer preferences and behavior.
- Data Collection: Businesses can gather valuable customer data for analysis and improving marketing strategies.
- Faster Transactions: Online transactions can be completed quickly compared to traditional methods.
- Increased Competition: E-commerce introduces competition, which can lead to better prices and services for consumers.

a) Encryption and Decryption:

- Encryption is the process of converting data into a coded form to protect it from unauthorized access. Decryption is the reverse process of converting encrypted data back into its original form.

b) Certification Authority (CA):

- A Certification Authority is a trusted entity that issues digital certificates used for authentication and security purposes. These certificates verify the identity of individuals, organizations, or websites in digital communications.

3. Business Contract and Partnership Dispute:

In the scenario you mentioned, where two individuals had a business contract for a partnership and one person breaches the contract, the consequences would typically depend on the terms of the contract and relevant laws. If the breach of contract leads to a partnership dispute, the injured party (the one who did not breach the contract) may seek legal remedies. This could include damages to compensate for any financial losses incurred due to the breach.

4. B2B and B2C:

- **B2B (Business-to-Business):** This refers to transactions between businesses. In B2B e-commerce, companies sell products or services to other businesses. Examples include suppliers selling raw materials to manufacturers.

- **B2C (Business-to-Consumer):**

This refers to transactions between businesses and individual consumers. B2C e-commerce involves selling products or services directly to end consumers. Examples include online retailers selling products to individual customers.

6. Elements of Branding:

- Branding elements typically include brand name, logo, tagline, color scheme, typography, and brand voice. MCQs could inquire about the components that create a brand's identity.

7. OLAP related MCQ:

- OLAP stands for Online Analytical Processing. MCQs might ask about the benefits of OLAP for data analysis and reporting.

8. Currency used in E-payments:

- E-payments can involve various currencies depending on the international scope of the transaction and the platforms used.

Short Questions:

- **Advantages of E-Business:**

- E-Business advantages include global reach, reduced operational costs, improved customer experience, data-driven insights, and streamlined processes.

- **CERT and SAN:**

- **CERT:** Computer Emergency Response Team
- **SAN:** Storage Area Network

- **Problems with Transactions on E-Business Websites:**

- Problems could include security concerns (fraud, data breaches), technical glitches, payment gateway issues, and lack of trust in online transactions.

Long Questions:

- **Competitive Advantage for JS Group over Accur.inc:**

- The answer would depend on the specific strengths of JS Group and the weaknesses or vulnerabilities of Accur.inc. Competitive advantage could stem from superior technology, cost efficiency, strong brand, innovative offerings, or strategic partnerships.

- **Business Development Questions using SWOT Analysis:**

- SWOT analysis covers Strengths, Weaknesses, Opportunities, and Threats. Questions could include:
 - What internal strengths can we leverage to capitalize on opportunities?
 - How can we mitigate weaknesses to avoid threats?
 - How can we use our strengths to exploit competitor vulnerabilities?
