

ENG520

Treasure for Final-Term

ABSTRACT

This comprehensive collection of notes is accurately crafted to empower students to excel academically, ensuring they achieve a minimum of 80% marks in their examinations. The content is organized with clarity and precision, focusing on key concepts, critical analyses, and practical applications tailored to the syllabus. These notes serve as a reliable resource for both thorough preparation and last-minute revision. Designed to inspire confidence and mastery, this guide is an essential tool for students striving for academic excellence.

Maha Malik

Testing and Evaluation

ENG520_Testing and Evaluation

Treasure for Final-Term

Topic- 072: Uses of True/ False Items

Another aspect of understanding that can be measured by true and false item is ability to recognize cause and effect relationship. This type of item usually contains true propositions in one statement, and the student is to judge whether the relationship between them is true or false.

Example: Directions, read each of the following statements, both parts of statements are true. You are to decide whether the second part explains why the first part is true. If it does, encircle Yes. If it does not, encircle No. Leaves are essentials because they shade the tree trunk. Yes No Some plants do not need sunlight because they get food from other plants. Yes No It could be used to measure some simple aspect of logic.

Topic- 073: Advantages and Limitations of True-False

Advantages of Alternative Form (True-False)

True-false questions are well suited for testing lower level learning outcomes, like a student's ability to;

- i. Identify the correctness of factual statements, e.g. Earth is a planet.
- ii. Definition of terms e.g. Photosynthesis is the process by which leaves make food for plants.
- iii. Statement of principles, e.g. Earth is revolving around the sun.
- iv. Distinguish facts from opinion, e.g. Islam is the official religion of Pakistan.
- v. Recognize cause-and-effect relationship

Limitations of Alternative Form (True-False)

Most commonly observed limitations are:

- i. All learning outcomes cannot be measured through alternative form questions. They are generally limited to lower level learning outcomes.
- ii. Ease of guessing correct answers when the answer is not known. With only two choices\ (true or false) the student could expect to guess correctly on half of the items for which correct answers are not known.
- iii. There is sometimes a tendency to take quotations from the text with a minor change in wording.
- iv. There may also be a tendency to include trivial material from the text.
- v. True-false items are prone to high guessing and can only be used for measuring lower level learning outcomes

Topic- 078: Suggestions for Constructing True-False Items –V

Avoid including two ideas in one statement unless cause and effect relationship are being measured. Explanation: Students can get confused and answer for only one statement. Other

ENG520_Testing and Evaluation

Treasure for Final-Term

statement can have different answers. It is better to use two simple statements instead of including two ideas in one statement.

Example: **Poor item**

Pakistan could not qualify for world cup hockey because of poor resources, low talent and government support. (T) Pakistan could not qualify for world cup hockey because of poor resources, low talent. (F) Pakistan could not qualify for world cup hockey because of poor resources. (T)

Topic- 081: Matching Exercises

The matching type exercises consist of two parallel columns, first column premises and the second one is responses and the directions for matching the two columns. Matching test items are also selection items specially used to measure a student's ability to identify the relationship between a set of similar items, each of which has two components. Such as words and their definitions, symbols and their meanings, dates and events, people and their accomplishments, etc. Matching exercise is economical methods when used with content which has the sufficient homogeneous factual information. In developing matching items, there are two columns of material. Matching exercise is used when measuring a student's ability to identify the relationship between a set of similar items, each of which has two components.

Topic- 082: Uses of Matching Exercises

The typical matching exercise is limited to measuring factual information, based on simple associations. It is a compact and efficient method of measuring such simple knowledge outcomes. It is also being used with pictorial materials in relating pictures and words to identify positions on maps, charts and diagrams. Regardless of the form of presentation, the student's task is essentially to relate two things that have logical association. This restricts the use of matching exercise to small area of student's achievement.

Topic- 083: Advantages and Limitations of Matching Exercises

Advantages of Matching Exercises

- ❖ The major objective of matching exercise is its compact form, which makes it possible to measure a large amount of related factual material in a relatively short time.
- ❖ Another advantage is ease of construction. Poor matching items can be rapidly constructed, but good matching item requires a high degree of skills.

Limitations of Matching Exercises

- ❖ It is restricted to the measurement of factual information, based on rote learning.
- ❖ It is highly susceptible to the presence of irrelevant clues.
- ❖ Difficulty of finding homogeneous material that is significant from the viewpoint of our objectives and learning outcomes.

Topic-088 Developing Short Answer/Completion Questions –I

ENG520_Testing and Evaluation Treasure for Final-Term

There are two types of item formats which are included in the category of supply type: short answers and completion and fill in the blanks, under the range of objective test items. Both the short answers and completion items are forms of supply item that can be answered by a word, phrase, number or symbol. They only differ in form of presentation. Short answers are presented in the form of direct questions while completion items are incomplete statements. Both of them can be answered with a word, phrase, number, or symbol. Such items are frequently used for measuring knowledge of terminology, specific facts, principles and procedures etc.

Topic- 090: Uses of Short Answer/Completion Questions

The short answer test item is suitable for measuring a wide variety of relatively simple learning outcomes. The following outcomes and test items some of its common uses.

Simple interpretation of data.

- i. How many syllables are there in word Argentina? (4)
- ii. In the number 612, what value does the 6 represent? (600)
- iii. If an airplane flying northwest made a 180 degree turn, what direction would it be heading? (Southeast)

Topic-091 Advantages of Short Answer/Completion Questions

Advantages of short answer/completion questions

- ❖ Teacher wants students to complete a large number of items in a fairly short time (unless they involve working complex mathematical problems).
- ❖ Teacher wants to control the possibility of guessing. Since the student has to generate the answers.
- ❖ The possibility of guessing the correct answers to these questions is greatly reduced when compared with true-false questions.

Limitations of short answer/completion questions

- ❖ A potential problem with both short-answer and completion items is that difficult to frame questions for one specific answer unless the items are well written.
- ❖ Not usable to measure complex learning outcomes.

Topic:97 Creating Constructed Response Test Items

Subjective test item

Restricted response essay type items

Subjective test items

Subjective test items (essay questions) are constructed response type questions that can be the best way to measure the students' higher order thinking skills. Such as applying, organizing, synthesizing, integrating, evaluating, or projecting while at the same time providing a measure of

ENG520_Testing and Evaluation Treasure for Final-Term

writing skills. Essay items can vary from very lengthy (5-10 pages), open-ended to limited or restricted response (one page or less).

Essay type questions are divided into two types

1. Restricted Response Items
2. Extended Response Items

Variety of learning outcomes can be checked by using this format of essay question. Some of which are;

1. Analysis of relationship.
2. Compare and contrast positions.
3. Explain cause-effect relationship.
4. Organize data and support a viewpoint.
5. Formulate hypotheses.

Topic:99 Extended Response Essay Type Items

Advantages of essay type items.

Extended response questions have following advantages over other types of question formats:

Effective for assessing higher order abilities: analyze, synthesize and evaluate.

It is comparatively less time consuming to develop such items.

Emphasizes essential communications skills

Guessing is eliminated.

Limitations of essay type items.

These advantages come with the following limitations:

- ❖ The scoring is unreliable and time consuming.
- ❖ Limited sampling of the content is possible.

Topic- 100: Guidelines for Writing Essay Type Items

Following guidelines are for writing essay type items when developing a test.

- ❖ Frame questions so that the examinee's task is explicitly defined.
- ❖ Specify the value and an approximate time limit for each question.
- ❖ Do not employ optional questions.
- ❖ Employ a larger number of questions that require relatively shorter answers rather than only a few questions that require long answers.
- ❖ Verify a question's quality by writing a trial response to the question.

Analytic Scoring Rubric

ENG520_Testing and Evaluation Treasure for Final-Term

Factors	Sub factors	Indicators
1. Examine problems	Diagnose problem and gather information	Identify facts
	Integrate the information and	Organize ideas

	able to summarize	Define terms
1. Look for evidence	Relevance (evidence pertinent to the issue)	Identify evidence
	Consistency (supporting material consistent with each other)	Describe evidence
Draw conclusions <i>Make comparative judgments from data and able to adjust opinions when new facts are found and reject information that is incorrect or irrelevant.</i>	Analyze and interpretation of data	Combine ideas and information in new ways
	Make comparisons	Write similarities
	Correlate result	Write differences
	Look for reasons	Use relationship between phenomena
		Present solution
Decision making	Look for plausible alternatives to the conclusion drawn	Explore possibilities
	Recognize and correct discrepancies	Formulate purposeful judgment
		Reject the wrong answer and make correction

Topic- 107: Test Theories in Item Analysis

1. Classical Test Theory (CTT)
2. Item Response Theory (IRT)

Classical Test Theory (CTT) and Item Analysis

Classical Test Theory (CTT) has relatively weak theoretical assumptions, which make it easy to apply in many testing situations. Relatively weak theoretical assumptions not only characterize CTT but also its extensions (e.g., generalizability theory). CTT's major focus is on test-level information; item statistics (i.e., item difficulty and item discrimination) are also an important part of the CTT model.

Item Response Theory (IRT) and Item Analysis

—Item Response Theory (IRT) presents a model for expressing the association between an individual's response to an item and the underlying latent variable (often called "ability" or "trait"). The latent variable, expressed as θ , is a continuous one-dimensional construct that explains the covariance among item responses. People at higher levels of latent trait have a higher probability of responding correctly or endorsing an item.

ENG520_Testing and Evaluation

Treasure for Final-Term

Item Difficulty in CTT

CTT does not raise a complex theoretical model to relate an examinee's ability to the probability of success on a particular item. CTT collectively considers a pool of examinees and empirically examines their success rate on an item. This success rate of a particular pool of examinees on an item, well known as the p value of the item, is used as the index for the item difficulty. In CTT, the item difficulty index p (p value), is the proportion of examinees correct on an item, expresses item difficulty on an Item.

Topic- 110: Item Characteristic Curve (ICC) in

Methodological properties of an ICC

1. The difficulty which under item response theory describes the item functions along the ability scale. For example an easy item functions among the low-ability examinees and a hard item functions among the high-ability examinees
2. The second property is discrimination, which describes how well an item can differentiate between examinees having abilities below the item location and those having abilities above the item location
3. An item characteristic curve is the graphical representation of the probability of answering an item correctly with the level of ability on the construct being measured. Item

Characteristic Curve (ICC) in IRT

It gives a picture of:

- ❖ The item difficulty
- ❖ Discrimination power
- ❖ The probability of answering correctly by guessing

As the item difficulties are defined in relation to ability levels, on the same scale. If we know person ability then we can predict how that person is likely to perform on an item, without administering the item to the person.

Topic- 111: Item Difficulty in Item Response Theory

Three item characteristic curves are presented on the same graph. All have the same level of discrimination but differ with respect to difficulty. Three item characteristic curves are presented on the same graph. All have the same level of discrimination but differ with respect to difficulty. The left-hand curve represents an easy item because the probability of correct response is high for low-ability examinees and approaches 1 for high-ability examinees.. The center curve represents an item of medium difficulty because the probability of correct response is low at the lowest ability levels, around 0.5 in the middle of the ability scale and near 1 at the highest ability levels. The right-hand curve represents a hard item. The probability of correct response is low for most of the ability scale and increases only when the higher ability levels are reached. Even at the highest ability level shown (+3), the probability of correct response is only 0.8 for the most difficult item.

ENG520_Testing and Evaluation Treasure for Final-Term

Topic- 113: Probability of Guessing in Item Response Theory (IRT)

Guessing means giving an answer or making a judgment about something without being sure of all the facts. Guessing is a standard test-taking strategy presented to examinees taking a multiple choice assessment. If test scores are based simply on the number of questions answered correctly, then a random guess increases the chance of a higher score. In IRT this parameter of an item is also known as G (guessing) parameter which allow to detect the potential possibility of guessing in an item.

Examinees guess because they do not have adequate knowledge or ability to provide correct answer **There are two types of guessing**

- ❖ Blind guessing
- ❖ Informed guessing

Blind guessing: Where an examinee chooses an answer at random from among the alternatives offered. **Informed guessing:** Where the examinee draws upon all his knowledge and abilities to choose the answer most likely to be correct.

Item writers should be conscious of guessing and not write item that could be prone to guessing. IRT method of item analysis should be employed to eliminate those items prone to guessing

Issues in test administration

1. Cheating
2. Poor testing conditions
3. Test anxiety
4. Errors in test scoring procedure

Once a test is ready then next step is to administer it. Teacher has to help the students psychologically by maintaining a positive test-taking attitude, clarifying the rules; penalties for cheating, reminding them to check their copies, minimizing distractions and giving time warnings. Cheating, poor testing conditions, and test anxiety, as well as errors in test scoring procedures contribute to invalid test results. Accurate achievement data are very important for planning curriculum and instruction. Test scores that overestimate or underestimate students' actual knowledge and skills cannot serve these important purposes. So it is worth a little more time to properly assemble and administer a test.

Topic- 115: Assembling Test: Recording Items

The preparation of test items is greatly facilitated if the items are properly recorded.

Recording test items

The card contain information concerning the instructional objectives, specific objective, difficulty index, discrimination index and the content measured by the item should be prepared for each item to maintain its record.

Maximize achievement motivation

ENG520_Testing and Evaluation Treasure for Final-Term

1. Encourage to do best, mitigate the fear
2. Highlight value of giving best
3. Reduce panic
4. Encourage serious thinking

Monitor students (test invigilation)

1. Penalties of cheating
2. Disturbing others
3. Seating position/posture
4. Protecting test from others
5. Cheating material handling

Topic: 125 Scoring Criteria: Scoring Rubric

Scoring Criteria

Planning how responses will be scored leads to rethinking and clarifying the questions so that students have a clearer idea of what is expected. Clear specification of scoring criteria in advance of administering essay questions can contribute to improved reliability and validity of the assessment.

Scoring Rubric

A rubric is an explicit set of criteria used for assessing a particular type of work or performance and provides more details than a single grade or mark. Scores levels identified in a scoring rubric must be descriptive, not merely judgmental in nature. Example: Define the level of rubric as —Writing is clear and thoughts are complete as compared to —excellent

Topic- 128: Holistic Scoring Rubric

These rubrics are good for evaluating overall performance on a task. All criteria are assessed as a single score. As only one score is given so holistic rubrics are easy to score.

When to use:

1. There is no correct answer/response to ask a task e.g. creative work.
2. Focus is on overall quality, proficiency or understanding of a specific content or skill.
3. The assessment is summative e.g. at the end of the semester or major.
4. Assessing significant numbers e.g. 150 student portfolio.

Holistic Rubric for Essay Type Questions

Holistic rubric is probably more appropriate for extended response essay type items involving a student's abilities to synthesize and create and when no definite answer can be pre-specified

Topic 129 Approaches to Apply Holistic Scoring Rubric

One way to implement holistic rubric is to decide beforehand on the number of quality categories into which you will sort the student's answers. A second better way of using the holistic method

ENG520_Testing and Evaluation

Treasure for Final-Term

is to craft a holistic rubric, which defines the qualities of paper that belong in each category. For example, defining what an —A| paper is a —B| paper is and so on. A third refinement is to select specimen papers, which are good examples of each scoring category. Then you can compare the student's paper with the pre-specified specimens that define each category level. A fourth way of implementing holistic rubric is to read the answer completely and one with an-other to decide which are the best. The next best and so on. This will result in the rough ranking of all the papers this approach of holistic rubric cannot be applicable to a large number of papers. Among these four approaches first three are consistent with a grading philosophy of criterion referenced or absolute quality standards While the fourth one is consistent with the norm reference or relative standard grading philosophy

Topic- 132: Standardized Achievement Test

A standardized achievement test a fixed set if items to measure defined achievement domain, specific direction for administrating and scoring test, and norms based on representative groups of individuals. Most publishes achievement test are called standardized achievement tests. These typically are norm referenced tests. Quite a few criterion referenced achievement tests are also been published. Achievement tests are used as part if broader assessment system or alone. They provide relatively inexpensive means of measuring broad achievement goals. Standardized achievement tests are often customized to include characteristics of both norm and criterion referenced test.

Topic- 133: Characteristics of Standardized Achievement

Test Characteristics of Standardized Achievement Test

1. The test items are of highly technical quality. They have been developed by educational and test specialists, pretested and selected on the basis of difficulty discriminating power, and relationship to a clearly defined and rigid set of specifications.
2. Directions for administering and scoring are so precisely stated that the procedures are standard for different users of test.
3. Norms based on national samples of students in the grade where the test is intended for use are provided as aids in interpreting the test scores.
4. Equivalent and comparable forms of the test are usually provided, information concerning the degree to which the forms are comparable.
5. A test manual is used as guides for administering the test, evaluating its technical qualities, and interpreting and using the results.

Topic- 134: Standardized Test Versus Informal Classroom Test

Standardized tests and carefully constructed test are common in many ways. The main differences between the two types are:

1. The nature of the learning outcomes and the content measured.
2. Quality of test items
3. Reliability of the tests

ENG520_Testing and Evaluation Treasure for Final-Term

4. Procedure for administering and scoring
5. Interpretation of scores

Reading test Such tests commonly measure

1. Vocabulary
2. Reading comprehension
3. Rate of reading

Topic- 139: Criterion-Referenced Interpretation

In case of standardized test, interpretation can only be made with reference to the constructions on which test was based by the developer. This is primarily useful in mastery testing where a clearly defined and delimited domain of learning tasks can be most readily obtained. Such interpretations must be made with caution because these tests were typically designed to discriminate among individuals rather than describe the specific tasks they can perform. Criterion-referenced interpretations of test results are most meaningful when the test has been specifically designed for this purpose e.g. designing a test that measures a set of clearly stated learning tasks.

Topic- 141: Norm-Referenced Interpretation

This interpretation tells us how an individual compares with other persons who have taken the same test e.g. ranking of scores from highest to lowest and to note where an individual's score falls. Standardized tests typically have been designed for norm-referenced interpretations which involves converting the raw scores to derived scores by means of table of norms.

Test construction in High Stake testing

- ❖ The format of items are same as used in CRT in classroom
- ❖ Item developed by professional employed in dedicated organization
- ❖ Item banks are developed
- ❖ Psychometric properties of item are tested
- ❖ The process goes on round the year

Topic- 144: Recommendations for Effective HST

Recommendations for effective High Stake Testing

- ❖ Protection against high stake decisions based on single test
- ❖ Adequate resources and opportunity to learn
- ❖ Validation for each intended separate use
- ❖ Full disclosure of likely consequences
- ❖ Alignment between test and curriculum

Scope of Examination Bodies

1. Examination commission conduct examination at grade 5 and 8 level
2. BISEs hold SSC and HSSC annual examinations

ENG520_Testing and Evaluation
Treasure for Final-Term

3. Boards of Technical Education conduct examination of various diplomas and certificates etc.

National Education Assessment system

The National Education Assessment System has been institutionalized in Pakistan at national level with the cooperation of provincial and area Assessment Centers. NEAS was established as five years development project with the financial assistance of the World Bank and Development for International Development (DfID) in year 2003. NEAS is subordinate office under the ministry of Federal Education & Professional Training.

Objectives of NEAS

1. Informing policy: the extent to which geography and gender are linked to inequality in student performance.
2. Monitoring standards: How well the curricula are translated into knowledge and skills
3. Identifying correlation of achievement: the principal determinants of student performance
4. Directing teachers' efforts and raising students' achievement: assisting teachers to use data to improve student performance.

Important abbreviations

Board of intermediate and secondary education (BISEs)

Inter board committee of chairman (IBCC)

National Education Assessment System (NEAS)

Provincial Education Assessment Centre (PEAS)
