

Q.1 Identify that the cell represented in the diagram below belongs to which of the following domain of living organisms?

- A. Cyanobacteria
- B. Plant
- C. Animal
- D. Bacteria

Q.2 Gram staining is an important technique used in the identification and classification of which of the following group of organism?

- A. Microorganisms
- B. Bacteria
- C. Prokaryotes
- D. Fungi

Q.3 The diagram below represents a plant cell. Identify the cellular component that stores water, salt and carbohydrate?

- A. E
- B. A
- C. D
- D. F

Q.4 Which of the following structures is responsible for the movement of a prokaryotic cell?

- A. Lysosome
- B. Cytoplasm
- C. Nucleus
- D. Flagella

Q.5 Which group of bacteria retains the crystal violet dye after the decolonization step in the Gram staining procedure?

- A. Acid-fast bacteria
- B. Gram-neutral bacteria
- C. Gram-positive bacteria
- D. Gram-negative bacteria

Q.6 Given below is the diagram of plant cell. Identify the cellular component that is labelled as alphabet 'E'?

- A. Chloroplast
- B. Lysozyme
- C. Vacuole
- D. Nucleus

Q.7 Which of the following organelles is responsible for breaking down cellular waste in animal cells?

- A. Mitochondria
- B. Nucleus
- C. Golgi apparatus
- D. Lysosomes

Q.8 What color will Gram-positive bacteria appear after the completion of the Gram staining process?

- A. Yellow
- B. Purple
- C. Blue
- D. Pink

Q.9 Which of the following structure in a plant cell is also called as post office of the cell as it ships proteins and lipids?

- A. E
- B. A
- C. C
- D. G

Q.10 What is the purpose of the condenser in a compound microscope?

- A. Produce light to illuminate the specimen
- B. Control the intensity of light
- C. Hold the specimen in place
- D. Adjust the focus of the image
