MCQS

1) Microorganisms came into being …… Billion years ago
   a) 1.2 to 1.5
   b) 3.3 to 3.5
   c) 5
   d) 2
2) Rhizobacteria found in soil fixate …… required to grow crops
   a) Sulfur
   b) Carbon dioxide
   c) Nitrogen
   d) Oxygen
3) Introduction of one or more gene conferring potentially useful traits called …….
   a) Diagnostic
   b) Breeding
   c) Transformation
   d) Isolation
4) Antibiotics, organic Acid, Enzymes are produced by ……
   a) Fermentation of microbes
   b) Anaerobically
   c) Oxygen
   d) None
5) Microorganism can degrade…….
   a) Oil
   b) Plastic
   c) Petroleum
   d) All
6) In bioprocessing ……. is the first issue of microorganisms
   a) Isolation
   b) Purification

c) Assessment
d) Processing

7) Shear sensitivity …… factor of strain improvement
a) Physiological
b) Physical
c) Nutritional
d) Metabolic

8) Nutritional value of microbes determined by……. Composition of microbial cells
a) Physical
b) Chemical
c) Both
d) None

9) If inserted genes are from same species, then transfer called
a) Horizontal
b) Vertical
c) Differential
d) none

10) Microorganisms play important role in conservation and ……. Biology of higher organisms
a) Preservation
b) Restoration
c) Storage
d) All

11) Examples of GM crops are
a) Mango
b) Grapes
c) Alfa Alfa
d) All

12) Genetic Modified are commonly used in foods and …….
a) Medicines

b) Agriculture
c) Animals
d) All

13) GM crops …….. starvation in the world due to fact that it cuts food prices.
a) More
b) Less
c) Mild
d) None

14) GMOs are beneficial they used to prevent the need of …….
a) Herbicides
b) Germicides
c) Pesticides
d) All

15) Fermentation is a metabolic process that consumes sugar in the absence of ……..
a) Oxygen
b) Carbon dioxide
c) Hydrogen
d) Nitrogen

16) Alcoholic fermentation is done by …….
a) Bacteria
b) Yeast
c) Penicillium
d) All

17) Microorganisms are used in the production of fermented foods and beverages
a) Lactobacillus
b) Yeast
c) Penicillium
d) All

18) The gas ……. Produced causes dough to rise when bubbles trapped in the dough
   a) Oxygen
   b) Carbon dioxide
   c) nitrogen
   d) ozone
19) the process of making genetically engineering animal is slow, tedious, …….. expensive process.
   a) Expensive
   b) Cheap
   c) Both
   d) None
20) Salami made from cured pork and …….. mixed together and seasoned with paprika and other chilies
   a) Chicken
   b) Beef
   c) None
   d) Both
21) Ham pork has been preserved through ……..
   a) Salting
   b) Smoking
   c) Wet curing
   d) All
22) Some types of microbes produced important drugs called
   a) Antibiotics
   b) Vaccines
   c) Antibodies
   d) All
23) Yeast are responsible for the fermentation of …….. in wine
   a) Alcohol
   b) Lactic acid

c) Both
d) None

24) How many types of fermentation?
a) Three
b) <u>Two</u>
c) Four
d) None

25) Lactic Acid generating bacteria cultures …… and their used of lactose in milk as a substrate of lactic acid
a) <u>Lactobacillus</u>
b) Yeast
c) Penicillium
d) All

👉____found in the soil fixates nitrogen which is required to grow many crops.

Rhizobacteria

👉___ or blue green algae produce oxygen in the ocean.

Cyanobacteria

👉Ability of microorganisms to degrade toxic materials like___

oil, petroleum, plastic (All)

‹👉Inserted genes usually come from a same species in a form of ___gene transfer.

vertical

👉Some type of microorganism produce important drugs called_____

ANTIBIOTICS

👉Which gas causes bubbles released in the dough causes it to rise so the bread becomes fluffy____?

CO

👉The starter cultures produce lactic acid, resulting in a____ in the milk and promoting curd synthesis.

PH decrease

👉Ham is pork that has been preserved through salting, ___, or wet curing.

smoking

👉How many types of fermentation? __

Two

👉Microorganisms are used in the production of fermented foods and beverage ___?

Yeast penciline lactobacillus (All)

👉Morphology is a ____ factor?

Physiological

👉Most common type of GMOs plant is____?

Alfalfa

👉Lactic acid bacteria also play an important role as they convert unstable ____that is naturally present in wine into stable lactic acid?

Malic Acid

3 Marks Questions

1) Name 3 bacteria found in food and beverages production?
2) How genetically modified organisms are produced?
3) Define term Upstreaming and down streaming?
4) Physiological factor of strain
5) Types of fermentation
6) How microbes are beneficial for human body
7) How animals digest cellulose?
8) Name the vitamins produced by microbes?
9) Role of microbes in medical industry?
10) Importance of microbes
11) steps in the production of GMOs
12) name two types of vitamins

5 Marks Questions

1) Draw flow sheet of alcoholic fermentation?
2) Define genetically modified organisms in detail? With examples
3) Detail note on issues with strain improvements?

4) Note on importancr of microbial biotechnology
5) Not on importance of microbes

6) Name 2 Pharmaceutical drugs and how they works.
7) Draw flow sheet diagram of lactic acid fermentation?
8) What is herbicide and insect tolerance?
9) What is bioprocessing and describe journey from biotechnology to biorefinery?
10) Upstream bio processing and downstream bio processing
11) Flow sheet diagram of alcoholic fermentation
