

CS306 MCQs - Part 4 (Topics 1-20, MCQs 151-200)

Question No: 1 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to _____ Noor institute of technology'?

- A. notes
- B. result
- C. math

D. Python

Explanation:

The correct answer, 'Python', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 2 (Marks: 1)

Which term best completes the following statement: 'OOP makes it easier to create modular, reusable, and maintainable code. Key Concepts of OOP: Classes: Blueprints for creating objects. Objects: Instances of a class. Attributes: Variables that belong to a class or object. Methods: _____ that belong to a class or object. ■■ 2.'?

A. Functions

- B. alice
- C. self
- D. oop

Explanation:

The correct answer, 'Functions', is directly supported by the provided text: 'OOP makes it easier to create modular, reusable, and maintainable code. Key Concepts of OOP: Classes: Blueprints for creating objects. Objects: Instances of a class. Attributes: Variables that belong to a class or object. Methods: Functions that belong to a class or object. ■■ 2.'.

Question No: 3 (Marks: 1)

Which term best completes the following statement: 'import, or aliases to access module content. _____ includes many powerful built-in modules (math, random, etc.). You can create your own modules by saving Python code in .py files. __name__ == "__main__" ensures code only runs when executed directly. ■ Homework / Practice'?

- A. import
- B. used

C. Python

D. pow

Explanation:

The correct answer, 'Python', is directly supported by the provided text: 'import, or aliases to access module content. Python includes many powerful built-in modules (math, random, etc.). You can create your own modules by saving Python code in .py files. `__name__ == "__main__"` ensures code only runs when executed directly. ■ Homework / Practice'.

Question No: 4 (Marks: 1)

Which term best completes the following statement: 'Inheritance in Python Inheritance allows a class (child/subclass) to inherit attributes and methods from another class (parent/superclass). Benefits of Inheritance: ••• Code reusability Better organization of code Supports extensibility Syntax: class Parent: # parent class code class Child(Parent): Notes for CS306 introduction to python _____ institute of technology # child class code ■ 2.'?

A. Noor

- B. polymorphism
- C. explore
- D. method

Explanation:

The correct answer, 'Noor', is directly supported by the provided text: 'Inheritance in Python Inheritance allows a class (child/subclass) to inherit attributes and methods from another class (parent/superclass). Benefits of Inheritance: ••• Code reusability Better organization of code Supports extensibility Syntax: class Parent: # parent class code class Child(Parent): Notes for CS306 introduction to python Noor institute of technology # child class code ■ 2.'.

Question No: 5 (Marks: 1)

Which term best completes the following statement: 'It is used to initialize attributes. _____: class Student: def `__init__`(self, name, roll_no): self.name = name self.roll_no = roll_no Creating Objects: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'?

- A. initializes
- B. lead

C. Example

D. here

Explanation:

The correct answer, 'Example', is directly supported by the provided text: 'It is used to initialize attributes. Example: class Student: def `__init__`(self, name, roll_no): self.name = name self.roll_no = roll_no Creating Objects: s1 = Student("Ali", 123) s2 = Student("Sara", 456) Accessing Attributes: print(s1.name) print(s2.roll_no) # Output: Ali # Output: 456 ■ 4.'.

Question No: 6 (Marks: 1)

Which term best completes the following statement: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. Two types of _____:'?

A. Libraries

- B. what
- C. help
- D. file

Explanation:

The correct answer, 'Libraries', is directly supported by the provided text: 'Libraries help avoid writing repetitive code and make programming faster and more efficient. Two types of libraries:'.

Question No: 7 (Marks: 1)

Which term best completes the following statement: 'Real-World Example Problem: Model a Person class and derive a Student class that adds student-specific attributes and behavior. Code: class Person: def __init__(self, name): self.name = name def introduce(self): print(f'Hi, I'm {self.name}') class Student(Person): def __init__(self, name, student_id): super().__init__(name) self.student_id = student_id Notes for CS306 introduction to python Noor institute of technology def introduce(self): print(f'Hi, I'm {self.name}, my student ID is {self.student_id}') _____: s = Student("Aisha", "VU1234") s.introduce() # Output: Hi, I'm Aisha, my student ID is VU1234 ■ 10.'?

- A. object
- B. class

C. Usage

- D. define

Explanation:

The correct answer, 'Usage', is directly supported by the provided text: 'Real-World Example Problem: Model a Person class and derive a Student class that adds student-specific attributes and behavior. Code: class Person: def __init__(self, name): self.name = name def introduce(self): print(f'Hi, I'm {self.name}') class Student(Person): def __init__(self, name, student_id): super().__init__(name) self.student_id = student_id Notes for CS306 introduction to python Noor institute of technology def introduce(self): print(f'Hi, I'm {self.name}, my student ID is {self.student_id}') Usage: s = Student("Aisha", "VU1234") s.introduce() # Output: Hi, I'm Aisha, my student ID is VU1234 ■ 10.'.

Question No: 8 (Marks: 1)

Which term best completes the following statement: 'It defines the attributes and methods common to all objects of that _____. Syntax to Define a Class: class ClassName: # constructor (__init__ method) def __init__(self, attribute1, attribute2): self.attribute1 = attribute1 self.attribute2 = attribute2 # method def method_name(self): pass Example: class Person: def __init__(self, name, age): self.name = name self.age = age def greet(self): print(f'Hello, my name is {self.name} and I am {self.age} years old.')

Notes for CS306 introduction to python Noor institute of technology Objects An object is an instance of

- a class.'?
A. you
B. create
C. attribute1

D. Class

Explanation:

The correct answer, 'Class', is directly supported by the provided text: 'It defines the attributes and methods common to all objects of that class. Syntax to Define a Class: class ClassName: # constructor (__init__ method) def __init__(self, attribute1, attribute2): self.attribute1 = attribute1 self.attribute2 = attribute2 # method def method_name(self): pass Example: class Person: def __init__(self, name, age): self.name = name self.age = age def greet(self): print(f"Hello, my name is {self.name} and I am {self.age} years old.") Notes for CS306 introduction to python Noor institute of technology Objects An object is an instance of a class.'

Question No: 9 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) _____ for CS306 introduction to python Noor institute of technology'?

- A. institute

B. Notes

- C. math
D. result

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 10 (Marks: 1)

Which term best completes the following statement: 'This function returns a file object, which provides methods and attributes to perform file operations. Syntax: file_object = open("filename", "mode") Parameters: • • "filename": The name of the file to be opened (can include the file path). "mode": The mode in which the file is opened (_____, write, append, etc.). Modes of File Operations: • • • • • 'r': Read (default mode).'?

- A. can
B. institute

C. Read

- D. path

Explanation:

The correct answer, 'Read', is directly supported by the provided text: 'This function returns a file object, which provides methods and attributes to perform file operations. Syntax: file_object = open("filename", "mode") Parameters: • • "filename": The name of the file to be opened (can include the file path). "mode": The mode in which the file is opened (read, write, append, etc.). Modes of File Operations: • • • • • 'r': Read (default mode).'

Question No: 11 (Marks: 1)

Which term best completes the following statement: 'o _____ root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'?

A. 100

B. for

C. Square

D. cs306

Explanation:

The correct answer, 'Square', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 12 (Marks: 1)

Which term best completes the following statement: 'Summary ••••• File handling in Python involves opening, reading, writing, and closing _____s. You can open files in various modes, such as 'r', 'w', and 'a'. Use read(), readline(), and readlines() to read from a file. Use write() and writelines() to write to a file. Always close a file after operations or use the with statement for automatic file management. Binary file handling is done using 'rb' and 'wb' modes for reading and writing binary data. ■ Homework / Practice'?

A. memory

B. writing

C. files

D. File

Explanation:

The correct answer, 'File', is directly supported by the provided text: 'Summary ••••• File handling in Python involves opening, reading, writing, and closing files. You can open files in various modes, such as 'r', 'w', and 'a'. Use read(), readline(), and readlines() to read from a file. Use write() and writelines() to write to a file. Always close a file after operations or use the with statement for automatic file management. Binary file handling is done using 'rb' and 'wb' modes for reading and writing binary data. ■ Homework / Practice'.

Question No: 13 (Marks: 1)

Which term best completes the following statement: 'Notes for CS306 introduction to _____'?

A. introduction

B. cs306

C. for

D. Python

Explanation:

The correct answer, 'Python', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 14 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) _____ for CS306 introduction to python Noor institute of technology'?

A. cs306

B. for

C. Notes

D. math

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 15 (Marks: 1)

Which term best completes the following statement: '_____ and use them in another script.'?

A. them

B. and

C. another

D. Import

Explanation:

The correct answer, 'Import', is directly supported by the provided text: 'Import and use them in another script.'.

Question No: 16 (Marks: 1)

Which term best completes the following statement: 'Protected Members Convention: prefix with a single underscore _. class Person: def __init__(self, name): self._name = name # protected class Student(Person): def display(self): Notes for CS306 introduction to python Noor institute of technology _____("Name:", self._name) s = Student("Sara") s.display() # Output: Name: Sara Note: It's still accessible, but considered for internal use or subclassing. ■ 6.'?

A. components

B. Print

C. for

D. protects

Explanation:

The correct answer, 'Print', is directly supported by the provided text: 'Protected Members Convention: prefix with a single underscore _. class Person: def __init__(self, name): self._name = name # protected class Student(Person): def display(self): Notes for CS306 introduction to python Noor

institute of technology print("Name:", self._name) s = Student("Sara") s.display() # Output: Name: Sara
Note: It's still accessible, but considered for internal use or subclassing. ■ 6.'

Question No: 17 (Marks: 1)

Which term best completes the following statement: 'Creates a new _____ or truncates an existing file. 'a': Append.'?

A. txt

B. File

C. new

D. etc

Explanation:

The correct answer, 'File', is directly supported by the provided text: 'Creates a new file or truncates an existing file. 'a': Append.'

Question No: 18 (Marks: 1)

Which term best completes the following statement: 'Access Modifiers in Python Python uses conventions (not strict rules) to denote access control: Modifier Syntax _____ var Access Level Accessible anywhere Protected __var Accessible in subclass Private __var Name mangled, internal use only ■ 4.'?

A. mangling

B. Public

C. modifiers

D. built

Explanation:

The correct answer, 'Public', is directly supported by the provided text: 'Access Modifiers in Python Python uses conventions (not strict rules) to denote access control: Modifier Syntax Public var Access Level Accessible anywhere Protected __var Accessible in subclass Private __var Name mangled, internal use only ■ 4.'

Question No: 19 (Marks: 1)

Which term best completes the following statement: 'Protected Members Convention: prefix with a single underscore _. class Person: def __init__(self, _____): self._name = name # protected class Student(Person): def display(self): Notes for CS306 introduction to python Noor institute of technology print("Name:", self._name) s = Student("Sara") s.display() # Output: Name: Sara Note: It's still accessible, but considered for internal use or subclassing. ■ 6.'?

A. Name

B. variables

C. only

D. problem

Explanation:

The correct answer, 'Name', is directly supported by the provided text: 'Protected Members Convention: prefix with a single underscore `_`'.
`class Person: def __init__(self, name): self._name = name #`
`protected class Student(Person): def display(self):` Notes for CS306 introduction to python Noor institute of technology
`print("Name:", self._name)` `s = Student("Sara") s.display()` # Output: Name: Sara
Note: It's still accessible, but considered for internal use or subclassing. ■ 6.'

Question No: 20 (Marks: 1)

Which term best completes the following statement: 'Opening Files in Python Before performing any operations on a file (like _____ing or writing), you need to open the file using the `open()` function. Notes for CS306 introduction to python Noor institute of technology Syntax: `file_object = open("filename", "mode")` File Modes: ••••• "r": Read (default mode).'?
A. concept
B. categorized
C. etc

D. Read

Explanation:

The correct answer, 'Read', is directly supported by the provided text: 'Opening Files in Python Before performing any operations on a file (like reading or writing), you need to open the file using the `open()` function. Notes for CS306 introduction to python Noor institute of technology Syntax: `file_object = open("filename", "mode")` File Modes: ••••• "r": Read (default mode).'.
A. use
B. and
C. another

Question No: 21 (Marks: 1)

Which term best completes the following statement: '_____ and use them in another script.'?
A. use
B. and
C. another

D. Import

Explanation:

The correct answer, 'Import', is directly supported by the provided text: 'Import and use them in another script.'

Question No: 22 (Marks: 1)

Which term best completes the following statement: 'Adding Methods to a Class You can add multiple methods to perform actions related to the _____. Example: `class Calculator: def __init__(self, a, b): self.a = a self.b = b def add(self): return self.a + self.b def subtract(self): return self.a - self.b` Using Methods: `calc = Calculator(10, 5) print(calc.add())` # Output: 15 `print(calc.subtract())` # Output: 5 ■ 6.'?
A. def
B. all

C. Object

D. instances

Explanation:

The correct answer, 'Object', is directly supported by the provided text: 'Adding Methods to a Class You can add multiple methods to perform actions related to the object. Example: class Calculator: def __init__(self, a, b): self.a = a self.b = b def add(self): return self.a + self.b def subtract(self): return self.a - self.b Using Methods: calc = Calculator(10, 5) print(calc.add()) # Output: 15 print(calc.subtract()) # Output: 5 ■ 6.'

Question No: 23 (Marks: 1)

Which term best completes the following statement: 'Notes _____ CS306 introduction to python'?

A. For

B. python

C. cs306

D. notes

Explanation:

The correct answer, 'For', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 24 (Marks: 1)

Which term best completes the following statement: 'It must be the first parameter of any method in the class. Example: class _____: def __init__(self, name): self.name = name def greet(self): print(f"Hello, my name is {self.name}") Usage: s = Student("Ayesha") s.greet() # Output: Hello, my name is Ayesha Notes for CS306 introduction to python Noor institute of technology ■ 5.'

A. Student

B. institute

C. shared

D. oop

Explanation:

The correct answer, 'Student', is directly supported by the provided text: 'It must be the first parameter of any method in the class. Example: class Student: def __init__(self, name): self.name = name def greet(self): print(f"Hello, my name is {self.name}") Usage: s = Student("Ayesha") s.greet() # Output: Hello, my name is Ayesha Notes for CS306 introduction to python Noor institute of technology ■ 5.'

Question No: 25 (Marks: 1)

Which term best completes the following statement: 'Properties (Alternative to Getters/Setters) Python provides a built-in @property decorator. Notes _____ CS306 introduction to python Noor institute of technology class BankAccount: def __init__(self): self.__balance = 0 @property def balance(self):

```
return self.__balance @balance.setter def balance(self, amount): if amount >= 0: self.__balance = amount else: print("Invalid amount") acc = BankAccount() acc.balance = 500 print(acc.balance) # Output: 500 ■ 9.?
```

A. For

- B. lecture
- C. flexibility
- D. modifier

Explanation:

The correct answer, 'For', is directly supported by the provided text: 'Properties (Alternative to Getters/Setters) Python provides a built-in @property decorator. Notes for CS306 introduction to python Noor institute of technology class BankAccount: def __init__(self): self.__balance = 0 @property def balance(self): return self.__balance @balance.setter def balance(self, amount): if amount >= 0: self.__balance = amount else: print("Invalid amount") acc = BankAccount() acc.balance = 500 print(acc.balance) # Output: 500 ■ 9.'

Question No: 26 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python _____ institute of technology'?

- A. square
- B. institute

C. Noor

- D. result

Explanation:

The correct answer, 'Noor', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of math.pow(2, 5) Notes for CS306 introduction to python Noor institute of technology'.

Question No: 27 (Marks: 1)

Which term best completes the following statement: '_____ Python encounters an error, it raises an exception to indicate that something went wrong. Types of Errors in Python:'?

- A. are
- B. disrupts
- C. went

D. When

Explanation:

The correct answer, 'When', is directly supported by the provided text: 'When Python encounters an error, it raises an exception to indicate that something went wrong. Types of Errors in Python.'

Question No: 28 (Marks: 1)

Which term best completes the following statement: '■ Lecture Objectives •••• _____ what libraries are in Python. Learn how to import and use external libraries in Python. Explore some commonly used standard libraries in Python. Learn about third-party libraries and how to install them using pip. ■ 1.'?

A. Understand

- B. use
- C. using
- D. programming

Explanation:

The correct answer, 'Understand', is directly supported by the provided text: '■ Lecture Objectives •••• Understand what libraries are in Python. Learn how to import and use external libraries in Python. Explore some commonly used standard libraries in Python. Learn about third-party libraries and how to install them using pip. ■ 1.'.

Question No: 29 (Marks: 1)

Which term best completes the following statement: 'Introduction to Object-Oriented Programming (OOP) Object-Oriented Programming (OOP) is a programming paradigm that organizes software design around _____s and classes.'?

A. Object

- B. oop
- C. person
- D. software

Explanation:

The correct answer, 'Object', is directly supported by the provided text: 'Introduction to Object-Oriented Programming (OOP) Object-Oriented Programming (OOP) is a programming paradigm that organizes software design around objects and classes.'.

Question No: 30 (Marks: 1)

Which term best completes the following statement: 'Summary ••••• Python provides open() for file handling with multiple modes (r, w, a, etc.). Always close the file or use with to do it automatically. Use exception handling to manage file errors. Files can be read as full text, line-by-line, or into lists. Binary files use 'rb' and 'wb' modes. Notes for CS306 introduction to python Noor institute of technology ■ Homework / _____'?

A. closes

B. Practice

- C. writing
- D. automatically

Explanation:

The correct answer, 'Practice', is directly supported by the provided text: 'Summary ••••• Python provides open() for file handling with multiple modes (r, w, a, etc.). Always close the file or use with to do it automatically. Use exception handling to manage file errors. Files can be read as full text,

line-by-line, or into lists. Binary files use 'rb' and 'wb' modes. Notes for CS306 introduction to python
Noor institute of technology ■ Homework / Practice'.

Question No: 31 (Marks: 1)

Which term best completes the following statement: '_____ __init__() Method (Constructor) The
__init__() method is automatically called when a new object is created.'?

- A. example
- B. species

C. The

- D. constructor

Explanation:

The correct answer, 'The', is directly supported by the provided text: 'The __init__() Method (Constructor) The __init__() method is automatically called when a new object is created.'.

Question No: 32 (Marks: 1)

Which term best completes the following statement: '_____ ••••• Inheritance allows reuse of code from parent classes. Method Overriding lets you modify inherited behavior. The super() function accesses methods from the parent class. Polymorphism enables different classes to use the same method names with different implementations. Python supports multiple types of inheritance, including multiple and multilevel. ■ Homework / Practice'?

- A. world

B. Summary

- C. code
- D. child

Explanation:

The correct answer, 'Summary', is directly supported by the provided text: 'Summary ••••• Inheritance allows reuse of code from parent classes. Method Overriding lets you modify inherited behavior. The super() function accesses methods from the parent class. Polymorphism enables different classes to use the same method names with different implementations. Python supports multiple types of inheritance, including multiple and multilevel. ■ Homework / Practice'.

Question No: 33 (Marks: 1)

Which term best completes the following statement: '_____ and use them in another script.'?

A. Import

- B. script
- C. another
- D. and

Explanation:

The correct answer, 'Import', is directly supported by the provided text: 'Import and use them in another script.'

Question No: 34 (Marks: 1)

Which term best completes the following statement: '_____ for CS306 introduction to python'?

- A. python
- B. introduction
- C. cs306

D. Notes

Explanation:

The correct answer, 'Notes', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 35 (Marks: 1)

Which term best completes the following statement: 'Opening Files with open() Syntax: file_object = open("filename", "mode") Notes for CS306 introduction to python Noor institute of technology Common File _____: Mode Description 'r' Read (default), error if file doesn't exist 'w' Write, creates file if not exists (overwrites) 'a' Append, creates if not exists 'b' Binary mode '+' Read & write mode ■ 3.'?

- A. syntax
- B. sara
- C. functions

D. Modes

Explanation:

The correct answer, 'Modes', is directly supported by the provided text: 'Opening Files with open() Syntax: file_object = open("filename", "mode") Notes for CS306 introduction to python Noor institute of technology Common File Modes: Mode Description 'r' Read (default), error if file doesn't exist 'w' Write, creates file if not exists (overwrites) 'a' Append, creates if not exists 'b' Binary mode '+' Read & write mode ■ 3.'.

Question No: 36 (Marks: 1)

Which term best completes the following statement: '■ Lecture Objectives • • • • _____ what exceptions are and why they occur. Learn how to handle exceptions using try, except, finally, and else. Explore built-in exception types. Raise custom exceptions using raise. ■■ 1.'?

- A. introduction
- B. effectively

C. Understand

- D. raising

Explanation:

The correct answer, 'Understand', is directly supported by the provided text: '■ Lecture Objectives • • • • Understand what exceptions are and why they occur. Learn how to handle exceptions using try, except, finally, and else. Explore built-in exception types. Raise custom exceptions using raise. ■■ 1.'

Question No: 37 (Marks: 1)

Which term best completes the following statement: 'Notes for CS306 introduction to _____'?

A. introduction

B. Python

C. for

D. notes

Explanation:

The correct answer, 'Python', is directly supported by the provided text: 'Notes for CS306 introduction to python'.

Question No: 38 (Marks: 1)

Which term best completes the following statement: 'Using else Clause Executes if no exception occurs. try: num = int(_____)("Enter a number: ") except ValueError: print("Invalid number.") else: print("Square is", num ** 2) ■ 5.'?

A. execute

B. its

C. Input

D. range

Explanation:

The correct answer, 'Input', is directly supported by the provided text: 'Using else Clause Executes if no exception occurs. try: num = int(input("Enter a number: ")) except ValueError: print("Invalid number.") else: print("Square is", num ** 2) ■ 5.'

Question No: 39 (Marks: 1)

Which term best completes the following statement: 'When you create an _____, Python calls the class constructor (____init__ method) to initialize the object's attributes. Creating an Object: person1 = Person("Alice", 30) person2 = Person("Bob", 25) Now, you can access the attributes and methods of the objects: print(person1.name) # Output: Alice person2.greet() # Output: Hello, my name is Bob and I am 25 years old. ■■ 3.'?

A. Object

B. bob

C. organizes

D. __init__

Explanation:

The correct answer, 'Object', is directly supported by the provided text: 'When you create an object, Python calls the class constructor (`__init__` method) to initialize the object's attributes. Creating an Object: `person1 = Person("Alice", 30)` `person2 = Person("Bob", 25)` Now, you can access the attributes and methods of the objects: `print(person1.name)` # Output: Alice `person2.greet()` # Output: Hello, my name is Bob and I am 25 years old. ■■■ 3.'

Question No: 40 (Marks: 1)

Which term best completes the following statement: 'o Square root of 100 o Value of pi o Result of `math.pow(2, 5)` Notes for CS306 introduction to python _____ institute of technology'?

A. Noor

- B. result
- C. pow
- D. institute

Explanation:

The correct answer, 'Noor', is directly supported by the provided text: 'o Square root of 100 o Value of pi o Result of `math.pow(2, 5)` Notes for CS306 introduction to python Noor institute of technology'.

Question No: 41 (Marks: 1)

Which term best completes the following statement: 'In this example, we will read from one file, modify its contents, and then write the updated content to a new file. Example: # Reading from the file with `open("source.txt", "r")` as file: `lines = file.readlines()` # Modifying the content `lines.append("This is a new line.\n")` # _____ to a new file with `open("destination.txt", "w")` as file: `file.writelines(lines)` ■■■ 8.'?

A. Writing

- B. failure
- C. source
- D. format

Explanation:

The correct answer, 'Writing', is directly supported by the provided text: 'In this example, we will read from one file, modify its contents, and then write the updated content to a new file. Example: # Reading from the file with `open("source.txt", "r")` as file: `lines = file.readlines()` # Modifying the content `lines.append("This is a new line.\n")` # Writing to a new file with `open("destination.txt", "w")` as file: `file.writelines(lines)` ■■■ 8.'

Question No: 42 (Marks: 1)

Which term best completes the following statement: '_____ and use them in another script.'?

- A. another
- B. and

C. Import

- D. them

Explanation:

The correct answer, 'Import', is directly supported by the provided text: 'Import and use them in another script.'

Question No: 43 (Marks: 1)

Which term best completes the following statement: '_____ the file for reading only. "w": Write.'?

A. into

B. Opens

C. new

D. can

Explanation:

The correct answer, 'Opens', is directly supported by the provided text: 'Opens the file for reading only. "w": Write.'

Question No: 44 (Marks: 1)

Which term best completes the following statement: 'Getter and Setter Methods Used to safely access or modify private attributes. Example: class BankAccount: def __init__(self): self.__balance = 0 def get_balance(self): return self.__balance def set_balance(self, amount): if amount >= 0: self.__balance = amount else: print("_____ amount") acc = BankAccount() acc.set_balance(1000) print(acc.get_balance()) # Output: 1000 ■ 8.'?

A. var

B. into

C. Invalid

D. mangled

Explanation:

The correct answer, 'Invalid', is directly supported by the provided text: 'Getter and Setter Methods Used to safely access or modify private attributes. Example: class BankAccount: def __init__(self): self.__balance = 0 def get_balance(self): return self.__balance def set_balance(self, amount): if amount >= 0: self.__balance = amount else: print("Invalid amount") acc = BankAccount() acc.set_balance(1000) print(acc.get_balance()) # Output: 1000 ■ 8.'

Question No: 45 (Marks: 1)

Which term best completes the following statement: 'Reading from a File _____ a file is opened in read mode ('r'), you can use different methods to read its contents. Methods to Read a File:'?

A. for

B. Once

C. from

D. opened

Explanation:

The correct answer, 'Once', is directly supported by the provided text: 'Reading from a File Once a file is opened in read mode ('r'), you can use different methods to read its contents. Methods to Read a File:'.

Question No: 46 (Marks: 1)

Which term best completes the following statement: '_____ to a File file = open("data.txt", "a") file.write("\nNew line added.") file.close() ■ 6.'?

A. institute

B. jpg

C. Appending

D. example

Explanation:

The correct answer, 'Appending', is directly supported by the provided text: 'Appending to a File file = open("data.txt", "a") file.write("\nNew line added.") file.close() ■ 6.'.

Question No: 47 (Marks: 1)

Which term best completes the following statement: '_____ and use them in another script.'?

A. and

B. script

C. Import

D. another

Explanation:

The correct answer, 'Import', is directly supported by the provided text: 'Import and use them in another script.'.

Question No: 48 (Marks: 1)

Which term best completes the following statement: 'This function returns a file object, which provides methods and attributes to perform file operations. Syntax: file_object = open("filename", "mode") Parameters: • "filename": The name of the file to be opened (can include the file path). "mode": The mode in which the file is opened (read, write, append, etc.). _____ of File Operations: • • • • • 'r': Read (default mode).'?

A. Modes

B. built

C. exclusive

D. used

Explanation:

The correct answer, 'Modes', is directly supported by the provided text: 'This function returns a file object, which provides methods and attributes to perform file operations. Syntax: file_object = open("filename", "mode") Parameters: • • "filename": The name of the file to be opened (can include the file path). "mode": The mode in which the file is opened (read, write, append, etc.). Modes of File Operations: • • • • • 'r': Read (default mode).'

Question No: 49 (Marks: 1)

Which term best completes the following statement: 'Introduction to Object-Oriented Programming (OOP) Object-Oriented Programming (OOP) is a _____ paradigm that organizes software design around objects and classes.'

A. Programming

- B. objectives
- C. years
- D. syntax

Explanation:

The correct answer, 'Programming', is directly supported by the provided text: 'Introduction to Object-Oriented Programming (OOP) Object-Oriented Programming (OOP) is a programming paradigm that organizes software design around objects and classes.'

Question No: 50 (Marks: 1)

Which term best completes the following statement: 'Private _____ Prefix with double underscore ____.'

A. sara

B. Members

- C. update
- D. level

Explanation:

The correct answer, 'Members', is directly supported by the provided text: 'Private Members Prefix with double underscore ____.'
