

Cs502

Midterm important questions 2024

VU360

Lecture 1-5:

1. What is the definition of software engineering and its importance?
2. What are the different software development life cycles (waterfall, agile, etc.)?
3. How do you explain the concept of software requirements engineering?
4. What is the concept of software design and its principles?
5. How do you explain the concept of software implementation and coding?

Lecture 6-10:

6. What is the concept of software testing and its importance?
7. How do you explain the concept of software maintenance and evolution?
8. What are the different software development methodologies (XP, Scrum, etc.)?
9. How do you explain the concept of software project management?
10. What is the concept of software quality assurance and its importance?

Lecture 11-15:

11. How do you explain the concept of software architecture and design patterns?
12. What is the concept of software reuse and its benefits?
13. How do you explain the concept of software metrics and measurement?
14. What is the concept of software reliability and fault tolerance?
15. How do you explain the concept of software security and its importance?

Lecture 16-20:

16. What is the concept of software engineering tools and environments?
17. How do you explain the concept of software version control and configuration management?
18. What is the concept of software documentation and its importance?

19. How do you explain the concept of software testing techniques and strategies?
20. What is the concept of software deployment and maintenance?

Lecture 21-22:

21. How do you explain the concept of advanced software engineering topics (SOA, microservices, etc.)?
22. What is the concept of software innovation and its importance?
