Lesson-06

PSYCHOLOGY OF LANGUAGE

Topic 029: Introduction to Psycholinguistics

What is Psycholinguistics?

Psycholinguistics explores the relationship between the human mind and language, treating language users as individuals and examining how mental processes influence linguistic performance.

What are the objectives of Psycholinguistics?

Psycholinguistics aims to understand the language process, study linguistic behavior patterns, and draw from related areas like neurolinguistics, phonetics, and semantics.

What is codification in Psycholinguistics?

Codification analyzes the processes that enable forming correct sentences from vocabulary and grammar.

What is the field of Psycholinguistics, and what does it explore?

Psycholinguistics is the field that explores the relationship between the human mind and language. It treats the language user as an individual, emphasizing how linguistic performance is determined by mental processes.

Topic 030: Language/Speech Production

Describe the Model of Language Development by Levelt.

Levelt's Model of Language Development consists of four stages: conceptualization, formulation, articulation, and self-monitoring.

What happens during the "Formulation" stage in language production?

During formulation, the process gets closer to the final output, focusing on word choice and sentence structure decisions.

Describe the Model of Language Development proposed by Levelt in 1989.

Levelt's model views language production as a linear progression of four stages:

Conceptualization - The stage where the initial idea for speech originates, though the details remain vague.

Formulation - The phase where thoughts become more precise and lead to the choice of words and sentence structures.

Articulation - The stage where the linguistic plan is executed by the speech system's muscles, producing sounds.

Self-monitoring - The final stage involves self-correction and self-repair in speech production.

Topic 031: Lexical Processing

What is the purpose of visual word recognition in lexical processing?

Visual word recognition is fundamental for constructing meaning from text, as it involves recognizing words and accessing their meanings.

What are content words in lexical processing?

Content words, such as nouns, verbs, adjectives, and adverbs, carry dictionary meanings and are essential for understanding text.

What are the three areas of study within lexical processing?

Lexical processing research falls into three areas:

Lexical Entries - Information stored about lexical items in the mind.

Lexical Storage - How lexical items are stored in relation to each other.

Lexical Access - The process enabling the retrieval of lexical items.

Topic 032: Text/Discourse Comprehension

What are the two levels of discourse structure discussed in the context of comprehension?

The two levels are local discourse structure (microstructure) and global discourse structure (macrostructure), both contributing to text coherence.

How do linguistic cues influence discourse comprehension?

Linguistic cues, like connectives and pronoun referents, guide the reader's understanding and the construction of coherent mental representations.

How does Discourse Context and Linguistic Cues influence Discourse Comprehension?

Successful Discourse Comprehension involves making inferences to connect ideas within and across discourse contexts. Linguistic cues, like connectives and pronouns, guide the construction of memory for discourse, helping in coherence and comprehension.

Topic 033: Language Development

At what age do infants start cooing and laughing?

Infants start cooing around 6 weeks of age and laughing at around 16 weeks.

What is telegraphic speech, and when does it typically occur?

Telegraphic speech is the use of two-word sentences. It usually emerges around 18 months of age, characterized by the rapid growth in vocabulary.

Does grammatical development continue throughout childhood?

Yes, grammatical development continues throughout childhood, and individuals keep learning new words and linguistic structures.

Lesson-07

SECOND LANGUAGE ACQUISITION I

Topic- 034: Introduction to Second Language Acquisition (SLA)

What is a second language, and what does it encompass?

A second language is any language other than the learner's native language or mother tongue, encompassing both languages of wider communication and foreign languages.

What is Second Language Acquisition (SLA) in general terms?

SLA in general terms refers to the process of learning a second language.

What does SLA specifically include, and how is it different from formal education?

SLA includes the theory of the process by which we acquire a second language, primarily a subconscious process during communication. It differs from formal education, which involves more conscious language learning processes.

What are second languages often referred to as, and what is their aim or goal?

Second languages are also called target languages (TL), which are any languages aimed or learned.

What are the three basic questions regarding the process of SLA?

- a. What exactly does the L2 learner come to know?
- b. How does the learner acquire this knowledge?

c. Why are some learners more successful than others?

What are the main disciplines involved in SLA, and what do linguists emphasize?

Multidisciplinary views are involved in SLA, primarily from linguistics and psychology. Linguists emphasize the characteristics of the languages being learned.

Topic- 035: The Role of the Native Language in SLA

What has the role of the native language in SLA been referred to as, and what concept is it associated with?

The role of the native language is known as "language transfer," and it has been tied to the concept that learners rely on their native language when learning a second language.

What are the three phases in which the comparison between L1 and L2 learning can be divided?

- a. Initial State
- b. Intermediate States
- c. Final State

What is "Interlanguage," and how does it differ from both L1 and L2?

Interlanguage is the intermediate state of a learner's language as they move toward the target L2. It differs from both the learner's native language (L1) and the target second language (L2).

What are the two types of language transfer discussed in the text?

- a. Positive Transfer
- b. Negative Transfer (or interference)

Topic- 036: Early Perspectives on SLA

What learning theory dominated the field of language teaching in the 1950s and 1960s?

Behaviorism dominated the field, viewing language learning as the formation of habits based on stimulus-response principles.

What is "Contrastive Analysis," and what was its primary focus?

Contrastive Analysis (CA) involved comparing L1 and L2 to determine similarities and differences. It focused on the surface forms of languages and assumed that language acquisition was a process of stimulus-response-reinforcement.

What were some criticisms of Contrastive Analysis?

- a. It couldn't explain how learners knew more than they had heard or been taught.
- b. CA analyses were not always validated by evidence and missed many learner errors.
- c. Instructional materials produced based on CA were language-specific.

Topic- 037: Early Perspectives on SLA II

What does "Error Analysis" focus on, and what are the steps in the procedure for it?

Error Analysis focuses on studying learner errors in L2 and includes the steps of collection, identification, description, explanation, and evaluation of errors.

What is "Interlanguage," and who introduced the term?

Interlanguage is the intermediate state of a learner's language, introduced by Larry Selinker. It is a third language system that differs from both the native language (L1) and the target language (L2).

Who introduced the "Monitor Model," and what are its key hypotheses?

The Monitor Model was introduced by Krashen and includes hypotheses like the Acquisition-Learning Hypothesis, Monitor Hypothesis, Natural Order Hypothesis, Input Hypothesis, and Affective Filter Hypothesis.

Topic- 038: Formal Approaches to SLA

What is "Universal Grammar (UG)" and what does it assume about language acquisition?

Universal Grammar is the theory that universal principles form part of the mental representation of language and mediate between sound and meaning. It assumes that some aspects of language learning involve innateness.

What are the key concepts associated with Universal Grammar?

Key concepts include linguistic competence, linguistic performance, the logical problem of language learning, and the idea of successful acquisition despite insufficient input.

What are "Principles and Parameters" in the context of language acquisition?

Principles and Parameters suggest that language consists of invariable principles common to all languages and variable parameters that vary across languages.

Topic- 039: Functional Approaches to SLA

What are the two main types of functional functions discussed in the text?

- a. Structural Function
- b. Pragmatic Function

What is the focus of Systemic Linguistics, and who is associated with it?

Systemic Linguistics focuses on the mastery of linguistic functions and is associated with Halliday.

What are the four functional approaches to SLA mentioned in the text?

- a. Systemic Linguistics
- b. Functional Typology
- c. Function-to-Form Mapping
- d. Information Organization

Lesson -08

SECOND LANGUAGE ACQUISITION II

Topic 040: Interlanguage in Context

What is the basic premise of sociolinguistic-based SLA research?

The basic premise is that second language data does not represent a static phenomenon and is influenced by external variables.

Why do learners sometimes produce different forms of language in their interlanguage?

Learners produce different forms due to the variability in their developing interlanguage system.

What is "interlanguage variation," and provide an example?

Interlanguage variation refers to the variability in learners' language forms. Example: A learner might alternate between "no" and "not" to express the same language function.

Initially, is the variation systematic or non-systematic?

Initially, the variation is non-systematic.

What does the variation in interlanguage focus on?

The variation focuses on the 'correlations of social facts and linguistic forms.'

Explain the concept of "interlanguage variation" and provide an example. What role does it play in second language acquisition?

Interlanguage variation refers to the variability in the language forms used by learners as they acquire a second language. An example is a learner alternating between "no" and "not" to express the same language function, such as in the sentences "My husband not here" and "No English." Initially, this variation is non-systematic, with no apparent difference in meaning. It represents the initial step in the development of target-like language usage and focuses on the correlation between social factors and linguistic forms.

Describe the key aspects of the "Social Interactional Approach" in second language acquisition. How does it challenge the traditional view of learning as an intra-psychological process?

The Social Interactional Approach posits that learning is not solely an intra-psychological process but is deeply connected to the social and local context. It emphasizes the adaptive nature of learning within a social interaction context. It challenges the idea that learning can be understood in isolation from its social surroundings and asserts that linguistic code must be analyzed within its social context. This approach recognizes the importance of external resources embodied in social interaction in the learning process.

Topic 041: Input, Interaction, and Output

What is the difference between "input" and "intake"?

Input refers to what is available to the learner, while intake refers to what is actually internalized by the learner.

According to Krashen's Input Hypothesis, what is necessary for second language learning to take place?

Exposure to comprehensible input is both necessary and sufficient for second language learning.

What is the Comprehensible Output Hypothesis, and why is it important?

It refers to the need for learners to be pushed towards delivering a precise message, and it highlights that output is essential for language acquisition.

How does Long's Interaction Hypothesis propose the relationship between environmental language and L2 development?

Long proposes that linguistic and conversational adjustments promote comprehension of input and, in turn, promote acquisition.

Explain the distinction between "Input" and "Intake" in the context of second language acquisition. Why is this differentiation important?

Input refers to the language and information available to a learner, while intake represents what a learner actually internalizes and incorporates into their language system. This differentiation is crucial because not all input becomes intake; learners select and process the input they can comprehend and assimilate, making it a significant step in the learning process. Incomprehensible language

may be part of the input but isn't integrated into the learner's language system, demonstrating that intake is a more specific concept than input.

Topic 042: Beyond the Domain of Language

What are some non-language factors that can affect success in second language learning?

Non-language factors include age, aptitude, motivation, attitude, and socio-psychological influences.

What is "affect" in the context of language learning?

Affect refers to the feelings or emotional reactions individuals have about language, people who speak it, or the culture where it is spoken.

How does social distance impact language learning, and what does Schumann's Acculturation Model suggest?

Social distance can result in diminished input, and the Acculturation Model suggests that acculturation leads to learning.

Is it commonly believed that children are better language learners than adults?

Yes, it is commonly believed that children are better language learners in terms of gaining mastery of an L2.

Discuss the concept of "Competence" and how it differs from "Performance" in the context of modern linguistics.

Modern linguistics emphasizes "Competence" as the knowledge that speakers have about a language rather than their actual language use in specific situations (Performance). Whether this competence is common to all native speakers remains an open question. While competence focuses on what speakers know, performance concerns what they actually do in particular instances, and understanding this distinction helps in studying language learning.

Define "Affect" and its role in language learning. How does it relate to feelings and emotions?

"Affect" in language learning refers to the feelings and emotions individuals have about language, the people who speak it, or the culture associated with it. It relates to emotional reactions and attitudes. Affect can greatly influence language learning as positive emotions and attitudes can enhance motivation, while negative emotions and attitudes, such as anxiety, can impede progress.

Topic 043: The Lexicon

What are some key aspects of lexical knowledge discussed in this topic?

Lexical knowledge is categorized into "receptive" and "productive" knowledge.

What is the difference between "receptive knowledge" and "productive knowledge"?

Receptive knowledge involves recognizing words and their meanings, while productive knowledge involves knowing how to use words accurately in various contexts.

What is the distinction between "breadth" and "depth" of vocabulary knowledge?

Breadth refers to the number of words known, while depth refers to the quality of knowledge about a word.

Topic 044: The Integrated View of Second Language Acquisition

What are the five stages involved in converting input to output in the integrated view of second language acquisition?

The stages are "Apperceived Input," "Comprehended Input," "Intake," "Integration," and "Output."

What is the role of "Apperceived Input" in language learning?

It is the stage where a learner relates new linguistic forms to prior knowledge, preparing the input for further analysis.

What is the difference between "comprehensible input" and "comprehended input"?

Comprehensible input is controlled by the input provider, while comprehended input is learner-controlled, with different levels of comprehension.

What is "intake" in the context of second language acquisition?

Intake is the process of assimilating linguistic material and mediating between input and grammar.

What is the final stage in the integrated view of second language acquisition?

The final stage is "Output," which is the learner's production of linguistic forms based on their grammar.

Lesson-09

METHODS AND APPROACHES OF LANGUAGE TEACHING I

Topic 045: History and Major Trends of Language Teaching

What are the major trends in the history of language teaching?

Major trends in the history of language teaching have reflected changes in the type of language proficiency learners need.

What was the significance of English in the 16th century?

English gained importance in the 16th century due to political changes in Europe, although Latin was still considered the classical language.

How did the presence of immigrants in the UK affect English language teaching in the 1960s?

The arrival of a large number of immigrants to the UK in the 1960s led to changes in English language teaching.

What is the percentage of multilingual individuals in today's population?

Approximately 60 percent of today's population is multilingual.

Who dominated the field of English language teaching historically?

The field of English language teaching has been historically dominated by British and American interests.

Topic 046: Approach, Method, Technique, Design, and Procedure

What does the term "approach" refer to in language teaching?

An approach refers to theories about the nature of language and language learning that guide language teaching practices.

What are the different theoretical views of language discussed in language teaching?

Theoretical views include the structural view, functional view, and interactional view of language.

What is the role of "procedure" in language teaching?

Procedure refers to the actual techniques and practices used in teaching a language and how they are integrated into lessons.

What is the primary focus of "technique" in language teaching?

Techniques are implementational strategies used to achieve specific teaching objectives.

How would you define a "method" in language teaching?

A method is the practical realization of an approach, including various procedures and techniques used for teaching.

Topic 047: Grammar Translation Method (GTM)

What are the basic assumptions of the Grammar Translation Method (GTM)?

GTM assumes that foreign languages can be learned through translation, that grammar is the essence of language, and that language learning involves memorizing rules and vocabulary.

What are some criticisms of GTM?

GTM is criticized for being teacher-centered, lacking a focus on fluency, and overemphasizing memorization and translation.

How is vocabulary and grammar taught in GTM?

Vocabulary is taught through bilingual word lists and grammar is taught deductively, with the presentation of rules followed by translation exercises.

What are some key practices and techniques used in a GTM lesson?

GTM lessons typically include reading passages, comprehension questions, grammar exercises, and translation exercises.

Topic 048: Audio-lingual Method (ALM)

What is the theoretical basis of the Audio-lingual Method (ALM)?

ALM is based on behaviorist psychology and structuralist linguistics, emphasizing the practice of language skills and the importance of phonology, morphology, and syntax.

What are the characteristics of ALM?

ALM includes the presentation of new language items in dialogues, extensive repetition, a focus on pronunciation, and the use of language laboratories.

What are the roles of learners in ALM?

Learners have a reactive role and are directed by training techniques.

How does the ALM approach writing in language learning?

ALM primarily focuses on speaking, with writing considered secondary for reinforcing learned elements.

What is the primary goal of ALM?

The primary goal of ALM is to help learners build grammatically correct sentences and develop speaking skills.

Topic 049: Oral Approach

What are the objectives of the Oral Approach?

The objectives of the Oral Approach include developing oral proficiency, vocabulary control, avoiding the use of the mother tongue, and emphasizing grammar control.

What is the theoretical assumption underlying the Oral Approach?

The Oral Approach views language as a system of structurally related elements, such as phonemes, morphemes, words, structures, and sentence types.

What techniques are used in the classroom when following the Oral Approach?

Techniques in the Oral Approach include dialogues, drills, and various activities to practice speaking and listening.

How does the Oral Approach view the role of the mother tongue (L1)?

The Oral Approach avoids the use of the mother tongue (L1) as much as possible in the classroom.

What is the role of the teacher in the Oral Approach?

The teacher serves as a model in the presentation stage and later acts as a conductor, guiding the learning process.

Topic 050: Direct Method

What were the objectives of the Direct Method (DM)?

DM aimed to teach everyday vocabulary and structures, develop oral skills, emphasize pronunciation, and avoid the use of the learner's native language (L1).

How did the Direct Method react to the Grammar Translation Method (GTM)?

DM was developed as a reaction to the inadequacies of GTM and advocated teaching language in context with minimal use of the learner's native language (L1).

What is the role of the written word in the Direct Method?

In the Direct Method, the written word is introduced only after the spoken language has been learned and should be kept away from learners as long as possible.

What is the primary focus of DM with regard to language skills?

DM primarily focuses on developing speaking and listening skills through the direct association of forms and meanings.

What are some criticisms of the Direct Method?

DM can be challenging to implement due to proficiency demands on teachers, and it may not align with the time and opportunities available in schools.

Lesson-10

METHODS AND APPROACHES OF LANGUAGE TEACHING II

Topic 051: The Communicative Approach

What is the Communicative Approach?

The Communicative Approach is an approach to language teaching that emphasizes the importance of communication and meaning over the accumulation of grammatical knowledge.

What major influences contributed to the development of the Communicative Approach?

British functional linguists, American sociolinguists, and changing political and educational realities in Europe influenced the Communicative Approach.

What are the aims of the Communicative Language Teaching (CLT)?

The aims of CLT include making communicative competence the goal of language teaching and developing procedures for teaching the four language skills that acknowledge the interdependence of language and communication.

Name one major principle of the Communicative Approach.

One major principle is that learners learn a language through usage and communication.

What types of activities are based on the Communicative Approach?

Activities based on the Communicative Approach include completing maps, dialogues, role plays, simulations, skits, improvisations, and debates.

Explain the major principles of CLT, distinguishing between Strong and Weak CLT. (Topic 051)

The major principles of CLT include the idea that learners acquire language through usage and communication, with an emphasis on authentic and meaningful communication. Strong CLT focuses on learning to use the language, while Weak CLT uses the language to learn it.

Explain the roles of learners and teachers in a CLT classroom. (Topic 051)

In a CLT classroom, learners are negotiators, contributors, and active participants in the learning process. Teachers play various roles as facilitators, organizers, researchers, and needs analysts, focusing on communication and fluency.

Topic 052: Task-based Language Teaching (TBLT)

What is the core unit of planning and instruction in Task-based Language Teaching (TBLT)?

Tasks, which are purposeful activities that emphasize communication and meaning, are the core unit of planning and instruction in TBLT.

What are some types of tasks used in TBLT?

Types of tasks in TBLT include problem-solving, information gap, jigsaw tasks, and decision-making tasks.

What are the roles of a learner in TBLT?

Learners in TBLT can take on roles such as group participants, monitors, risk-takers, and innovators.

How does TBLT differ from traditional language teaching methods?

TBLT focuses on the use of tasks as the core instructional unit and emphasizes communication and meaning, in contrast to more traditional methods that often prioritize grammar and vocabulary.

What is the concept of a 'task' in TBLT, and how is it essential to the syllabus design? (Topic 052)

In TBLT, a 'task' is an activity or goal carried out using language, emphasizing meaning. Tasks involve learners' use of communication strategies and interactional skills and have real-life language use resemblance.

What are the different types of tasks used in TBLT, and how do they influence language learning? (Topic 052)

TBLT uses various types of tasks, such as listing, ordering, problem-solving, jigsaw tasks, and more. These tasks encourage language learners to engage in meaningful, authentic communication and promote language acquisition.

Topic 053: The Silent Way

Who devised The Silent Way, and what is its main premise?

The Silent Way was devised by Caleb Gattegno, and its main premise is that the teacher should be silent as much as possible while encouraging learners to produce as much language as possible.

What is the "spirit" of the language in The Silent Way?

The "spirit" of the language refers to the unique sound system and melody of a language, emphasizing the importance of phonological and suprasegmental elements.

What is the basic unit of teaching in The Silent Way?

In The Silent Way, the sentence is the basic unit of teaching.

What role does silence play in The Silent Way?

Silence is considered the best vehicle for learning in The Silent Way as it allows students to concentrate on tasks and potential means for achieving them.

Topic 054: The Bilingual Method

Who developed the Bilingual Method, and why was it developed?

The Bilingual Method was developed by Dr. C.J. Dodson as a reaction against the direct method (DM) and to improve audio-visual methods.

How does the Bilingual Method differ from the Direct Method (DM)?

In the Bilingual Method, both the mother tongue and target language are used, with the mother tongue used to gloss difficult words, not for translating the entire language.

What role does L1 (the mother tongue) play in the Bilingual Method?

L1 is used to help learners achieve communication goals and is not seen as interfering with the learning process of the target language (L2).

What are the principles of the Bilingual Method?

The Bilingual Method involves the controlled use of students' mother tongue, early introduction of reading and writing, and the integration of various skills.

Topic 055: The Post-Methods Era

What criticism led to the emergence of the "post-methods era" in language teaching?

The criticism of methods included their prescriptive nature, the marginalization of teachers and learners, and the lack of flexibility in adapting to contextual factors.

What role do contextual factors play in the post-methods era?

Contextual factors, including cultural, political, and institutional context, are considered important, and methods should not be seen as one-size-fits-all solutions.

What is the key shift in the post-methods era in terms of teaching and learning?

The shift involves recognizing the importance of teachers' roles, effective teaching and learning, and individualized approaches over rigid methods.
