

Bio202 Best MCQS File Final + Mid 2023

Efforts By Nasrullah Saeed

Final 15 – 28 Aug 2023

1. Sunflower osazones are Maltose in nature.
2. Pepsin is active at pH 2.
3. The pka value of acetic acid is 4.76.
4. The beets sheets form the core of globular proteins .
5. Leukotrienes are named because they was first identified in white blood cells .
6. About 78% of the amino acid residues in the myoglobin are found in α helices with bends in between.
7. Ethanolamine is a primary alcohol and a primary amine.
8. Galactolipids constitute about 70% to 80 % of plant membrane lipids.
9. mRNA makes 2-5% of cell.
10. RNA referred as _____
11. Galactose joined to glucose by beta(1-4).
12. Keratin is found in hair, nail, hoofs.
13. Guanosine binds to cytosine.
14. The pH is maintained by buffer solution .
15. Reversible inhibitor decrease the value of V_{max} .
16. Reversible inhibitors typically bind to enzymes through noncovalent bond.
17. The difference between the energy levels of the ground state and the transition state is the *activation energy.
18. What is wrong about Michaelis Menten equation . Ans.The rate of the reaction is inversely proportional to the enzyme concentration.
19. Saturated fatty acids have double bonds. Ans. Zero
20. The common name of omega-6 is lenoleic acid.
21. pH of pepsin ____
22. Symbol of aspartate _____
23. A--- is a bio catalyst that increase the rate
24. Systemic naming enzymes are divided into -----
25. Molecular weight of water ----
26. Hemoglobin is the red pigment containing protein components and derivative _____
27. The iron of heme group is _____
28. Omega 6 other name Linoleic acid
29. Triacylglycerol are soluble in.....ether, benzene,
30. VLDLs composed predominantly of TAGs
31. The mammalian ribosomes contains two major _____
nucleoprotein subunits.....(Large 60S smaller 40S)
32. These enzymes catalyze condensation reactions joining
33. Two molecules by forming C-O, C-S, C-N and C-C bonds..... ligases

Bio202 Best MCQS File Final + Mid 2023

Efforts By Nasrullah Saeed

34. Measure of randomness of system is.... Entropy
35. Immunoglobulin IgG consist of
36. Optimum pH of pepsin..
37. Triple bond has...
38. Example of glycerol
39. Waxes show _____ test. negative
40. Example of purines... Guanine.
41. Constituent of chondroitin....– D -mannosamine.
42. Titration curve of glycerol known as _____
43. What is reactivity
44. non-competitive inhibitors in terms V_{max} .
45. Bile is found _____
46. Reversible inhibitors bind to enzymes through.....
47. Disease occur by misfolding of protein
48. W-6 is common name is _____ linoleic acid
49. tRNA concentration in cell _____ 20%
50. Globosides are highly abundant in _____ Rbcs
51. _____ Is a common secondary structure of protein... Alpha helix
52. table sugar is _____
53. which one is present only in RNA _____ Uracil.
54. waxes are insoluble in _____ water .
55. Which bases have triple bond _____ guanine and cytosine.
56. Instead of thymine which is present in RNA _____? Uracil.
57. The deleterious effect of trans fats occur at intake _____? 2-7g/per day
58. Leukotrienes they were first discovered in _____ White blood cell
59. In protein there is _____ peptide bond
60. Atomic number of oxygen is _____ '8'
61. Chargaff rule _____ A+G and G+C
62. Phosphatidyl choline is formed by _____ "sphingosine and choline"
63. Histidine is a generally considered to be a _____ amino acid Polar
64. Lysine is _____ in nature hydrophilic
65. Cholesterol is produced in _____ "liver"
66. At the _____ of any titration, a point is reached where the pH is equal to the pKa of the protonated group being titrated midpoint
67. In water _____ is significant character hydrogen bonding"

Bio202 Best MCQS File Final + Mid 2023

Efforts By Nasrullah Saeed

68. In contrast to keratin, myoglobin, whose structure is also highly α -helical, is a _____, flexible molecule.
globular
69. The two amino acids having R groups with a net negative charge at pH 7.0 are aspartate and _____
glutamate
70. Seminal fluid is rich in _____
Fructose
71. short wavelength of DNA? _____
260 nm
72. which is the structural protein in the following? _____
All of these (Collagen, Elastin and Keratin)
73. leukotrienes are present in ? _____
leukocytes (white blood cells)
74. value of palmitic acid?
75. value of glycine?
76. glutamate has a pI value of? _____
3.22,
77. which is formed when carbohydrates and proteins are together? _____
Glycoproteins
78. which is the table sugar in following? _____
Sucrose
79. Which is aromatic Amino acid _____
All of these are aromatic amino acids (Phenylalanine. Tyrosine And Tryptophan)
80. Which are Halogens of the following ? _____
All of these are Halogens (chlorine, bromine and iodine)
81. Which Amino acid negatively charged at physiological ph. _____
free D- , serine and D-aspartate in brain tissue
82. Purines pair _____
83. Types of enzymes _____
84. 6)first leukotrienes discovered in _____
leukocytes (white blood cells)
85. Which is aromatic Amino acid _____
All of these are aromatic amino acids (Phenylalanine. Tyrosine And Tryptophan)
86. Which are Halogens of the following ? _____
All of these are Halogens (chlorine, bromine and iodine)
87. Which Amino acid negatively charged at physiological ph. _____
free D- , serine and D-aspartate in brain tissue
88. Purines pair bina tha..
89. Types of enzymes _____
90. first leukotrienes discovered in _____
leukocytes (white blood cells)

Bio202 Best MCQS File Final + Mid 2023

Efforts By Nasrullah Saeed

Mid 10 - 23 June 2023

1. What is adult hemoglobin _____ **Haemoglobin A**
2. Major Hemoglobin in adults is _____ is composed of Four Polypeptide chains **Hemoglobin A**
3. keratin is present in _____ **Structural Proteins**
4. maltose made hydrolysis of _____ **Glucose**
5. horn is made by _____ **Keratin**
6. The reappearing process of DNA is called _____
7. A (-PO₃²⁻) from ATP is transferred to an alcohol forming _____
8. End product of glycolysis _____ **Pyruvic acid**
9. In the submersion process, organisms grown in which medium _____
10. Structure of tRNA _____
11. The synthesis process of glucose is called _____ **Gluconeogenesis**
12. the amide group of _____ serves as site of attachment for oligosaccharide chain in glycoprotein
a. a) serine b) threonine c) asparagine **d) all of these**
13. The following salt is water soluble _____ **K**
14. the partial pressure of oxygen needed to achieve half saturation of the binding sites is called.....
a. a) **p50** b) p60 c) p70 d) none
15. Haemoglobin is present in _____ **red blood cells**
16. immunoglobulin are _____ in nature **Protein**
17. lauric acid the saturated fatty acid having _____ carbon Atom chains **12**
18. A simple monoamino monocarboxylic acid Such as _____ is a diprotic acid when fully protonated **Alanine**
19. The hydroxyl group of serine & threonine serve as a site of attachment for oligosaccharide chains in _____ **Glycoproteins**
20. As the hydrolytic products invert the rotation, the resulting mixture is called as invert sugar and the process is called _____ **inversion**
21. pK₂ value for glycine is _____ **2.34**
22. Which amino acid acts both glucogenic and ketogenic _____ **Tyrosine**
23. Myoglobin is composed of a single polypeptide chain which has _____ **One O₂ binding site**
24. In sickle cell anemia, Glutamate is replaced with _____ **Valine**

Bio202 Best MCQS File Final + Mid 2023

Efforts By Nasrullah Saeed

25. The enzyme that catalyzes the interchange. or shuffling. of disulfide bonds until the bonds of the native conformation are formed is called: _____. **protein disulfide isomerase**
26. The following salt is water soluble _____. **k**
27. Sickle cell anemia is caused by a genetic defect in the _____. **beta-globin gene**
28. Sunflower-shaped _____. **Maltose**
29. ____ is replaced by valine in sickle cell anemia
30. The melting point of fatty acids depend upon
31. 2. The melting point of fatty acids depend upon
a) degree of saturation b) branching of chain c) both.
32. Glutamate is replaced by
33. Glutathione consists of how many amino acids?
34. Enzymes are _____ a) **proteins** b) carbohydrates c) lipids.
