

FINAL TERM CURRENT SUBJECTIVE (EDU406)

PREPARE BY: ASHAM

1. DEWEY MODEL?

The Dewey model refers to John Dewey's approach to education, emphasizing learning through experience. In simple terms, it's about hands-on learning where students engage with real-world problems and activities. This helps them understand concepts more deeply and develop critical thinking and problem-solving skills. It encourages learners to think actively and reflect on their experiences.

2. PHASES OF REFLECTION ACCORDING TO DEWEY?

Dewey suggests aspects (phases) of reflective thought:

- ❖ **Suggestions**...where the mind leaps forward to a possible solution
- ❖ **Intellectualization**...of the difficulty or perplexity that has been directly experienced into a Problem to be solved
- ❖ **Hypothesis**...the use of one idea after another as a leading idea to initiate and guide observation
- ❖ **Mental elaboration**...which clarifies the idea by overt or imaginative action
- ❖ **Testing the hypothesis**...Dewey did not believe that there was a strict order to these phases. He Described them as being _fluid_

3. DEFINE GROUNDED THEORY?

Focus on generating theoretical ideas (or hypotheses) from experiences rather Than having these specified beforehand. Grounded theory is inductively derived From the study of the phenomena it represents

4. LESSON PLAN AS BACKBONE OF LEARNING?

A lesson plan is like the backbone of learning because it provides the structure for what's going to be taught. It lays out the goals, activities, materials, and steps the teacher will follow, ensuring that the lesson is organized and focused. Just like the backbone supports the body, a lesson plan supports the learning process, helping teachers and students stay on track.

5. RELATION OF RP WITH PUPILS?

the relationship between Reflective Practice (RP) and pupils. Reflective Practice helps teachers think about their teaching methods, what works well, and what can be improved. This self-aware approach means that teachers are more likely to recognize students' (or pupils') needs and adapt their teaching to meet those needs. In simple terms, when teachers use Reflective Practice, they become better at understanding and supporting their students, leading to a more effective learning experience.

6. TEACHER AS LIFE LONG LEARNER?

A teacher as a lifelong learner means that a teacher never stops learning. They continue to explore new ideas, methods, and skills to improve their teaching and stay up-to-date. Just like students, teachers are always growing and learning, making them better equipped to educate and inspire others.

7. TECHNOLOGICAL TOOL IN TEACHING LEARNING PROCESS?

Technological tools in teaching refer to using things like computers, tablets, software, and the internet to make learning more engaging and effective. These tools can help teachers present information in exciting ways and allow students to explore and practice skills interactively. It's like adding a modern twist to traditional teaching to make learning more fun and relevant.

8. DIFFERENTIATE INWARD AND OUTWARD?

“Inward” and “outward” are terms that describe opposite directions or focuses.

1. Inward:

- ❖ **Direction:** Points towards the inside or center of something.
- ❖ **Focus:** Concerned with internal thoughts, feelings, or self-examination. In a personal context, it might refer to introspection or self-reflection.

2. Outward:

- ❖ **Direction:** Points towards the outside or exterior of something.
- ❖ **Focus:** Concerned with external aspects, such as the physical environment or relationships with others. In a personal context, it might refer to how one interacts with the world around them or projects themselves externally.

So, the primary difference lies in the direction and focus: inward is oriented towards the inside or self, while outward is oriented towards the outside or others.

9. WHAT ARE THE KEY COMPONENTS OF BOUD'S MODEL OF REFLECTIVE PRACTICE?

Boud's model of reflective practice has three main parts:

1. **Remembering the Experience:** Think about what happened and describe it.
2. **Connecting with Feelings:** Recognize how the experience made you feel, both good and bad.
3. **Evaluating the Experience:** Analyze what you've remembered and felt to understand it better and learn from it.

In short, Boud's model helps you think about an experience, how it made you feel, and what you can learn from it.

10. TEACHER DEVELOPMENT MODELS? ?

Teacher development models are plans or guidelines that help teachers grow and improve in their careers. They often include:

1. **Training:** Learning new skills and knowledge through workshops or courses.
2. **Mentoring:** Getting guidance and support from more experienced teachers.
3. **Reflection:** Thinking about teaching experiences to understand what works and what can be improved.
4. **Continuous Learning:** Keeping up with new teaching methods, technologies, and research to stay current in the field.

In short, these models help teachers learn, grow, and become better at their jobs.

11. ENLIST 4 STAGES OF DIALOGIC DIARY?

There are different stages to Dialogic Diaries:

Stage 1: Uncertainty: There is uncertainty about how to write and what to write. Is it good for reflection.

Stage 2: Enthusiasm: Once the level of uncertainty is overcome, the RP can find the writing in Journal And response to the journal becomes quite an engaging process for RP. Once the dialogic diary has been engaged for some time, it actually becomes a little habitual and can lead to lack of enthusiasm

Which is stage 3 of the process.

Once this stage is passed, this becomes a habit and learning can develop quickly but this requires Motivation and for the RP its worth at this point being aware of it and then this

becomes quite powerful. Because learning can be ongoing. Dialogic Diaries are powerful for reflection but there are certain issues maintaining a diary.

1st is time. The teachers require time to write diaries. The time needed for diary writing process to Continue for a long term. So sometimes, diary writing becomes unproductive.

12. RELATION OF TEACHER WITH STUDENT IN CLASSROOM?

The relationship between a teacher and student in the classroom is a partnership where the teacher guides and supports the student's learning. The teacher provides instruction and encouragement, while the student engages with the material and asks questions. A positive relationship fosters a supportive and respectful environment, enhancing the student's ability to learn and grow.

13. EXPLAIN PROFESSIONAL DEVELOPMENT?

Professional development refers to the ongoing process of acquiring new skills, knowledge, and abilities to enhance one's career. It often includes training, workshops, conferences, and self-study. The goal is to keep professionals up-to-date with the latest trends, technologies, and best practices in their field, allowing them to perform their jobs more effectively and advance in their careers.

14. 5D APPROACHES OF ENQUIRY?

The term "5D approaches of enquiry" doesn't directly correspond to a well-known or standardized concept in education or research. However, it might refer to a specific method or framework used within a particular context, organization, or field of study.

Generally, inquiry approaches often involve stages such as defining a problem, designing a research plan, gathering data, analyzing data, and drawing conclusions. Without more specific details about the context or subject you're referring to, it's challenging to provide an accurate explanation of the "5D" part.

15. EXPLAIN ACTION RESEARCH?

Reflective practice can be more formally encouraged and directed as action research. Action Research involves systematically changing your teaching using on the ground evidence that Suggest the changes you make are in the right direction and enhancing student learning.

- ❖ The target of action research is the teacher not the change that is being implemented.
- ❖ Educational Action Research as a Critical Social Science- carr and Kemmis
- ❖ Carr and Kemmis say action research is a form of research carried out by practitioners into their Own practices.
- ❖ Action research is a participatory, democratic form of educational research for educational Improvement.

- ❖ Action research emphasizes practices a committed action or praxis
- ❖ Action research expresses a commitment to the improvement of practices not to argue for or Against a theory.
- ❖ Action research is seen as a form of practical enquiry characterised by a self-reflecting spiral Of cycles of planning, acting, observing and reflecting.
- ❖ Some Suggestions for thinking about practice.
- ❖ Bryant states that there are many themes and aspects of practice to question about action Research before even looking at any theories.
- ❖ They are: Setting (where the activities are taking place)
- ❖ Play (looking at ideas in terms of a game where there are rules: these rules can be both enabling And constraining

16. THREE PURPOSE OF ACTION RESEARCH?

Action research serves several purposes, particularly in educational settings. Here are three primary purposes:

1. **Improving Practice:** One main goal of action research is to enhance the effectiveness of a particular practice or method. Whether it's a teaching strategy or an organizational procedure, action research allows practitioners to reflect on what's working and what isn't, leading to informed improvements.
2. **Solving Specific Problems:** Action research is often initiated to address a specific problem or challenge within a classroom or organization. By carefully planning, acting, observing, and reflecting, practitioners can develop targeted solutions to these problems.
3. **Professional Development:** Action research encourages ongoing learning and growth among professionals. Through the process of investigating their practice, educators and other professionals can deepen their understanding of their field, fostering continuous professional development.

In essence, action research is a valuable tool for improving practices, solving problems, and facilitating ongoing professional growth, making it a widely used approach in various fields, including education.

17. PURPOSE OF REFLECTIVE PRACTICE?

The purpose of reflective practice is to help individuals think about what they've done, understand what went well or what didn't, and use those insights to improve in the future. It's like looking in a mirror at your actions and learning from them, so you can do better next time.

18. TEACHING CAN BE SEEN AS A ART THAN SCIENCE?

Viewing teaching as an art emphasizes the creative, intuitive, and personalized aspects of the profession. Here's a breakdown:

1. **Creativity:** Like an artist, a teacher must design engaging and innovative lessons that cater to different learning styles and interests.
2. **Intuition and Empathy:** A great teacher often understands students' needs and feelings, tailoring their approach to each individual, much like an artist communicates emotion through their work.
3. **Inspiration:** Teaching as an art involves inspiring and motivating students, fostering a love for learning, and creating a positive and stimulating environment.
4. **Flexibility:** Just as an artist may change direction during the creative process, teachers must be flexible and adaptive to the ever-changing dynamics of a classroom.

While there are scientific aspects to teaching, such as evidence-based methods and systematic planning, the art of teaching emphasizes the human, emotional, and subjective side of the profession. It's the combination of creativity, empathy, and personal connection that often leads to the most memorable and impactful educational experiences.

19. SIX PHASE MODEL?

The Six Phase Model usually refers to a structured approach for problem-solving or project management. It consists of the following phases:

1. **Identify the Problem:** Understand what needs to be fixed.
2. **Analyze the Problem:** Look into the details of the problem.
3. **Develop Solutions:** Come up with ways to fix the problem.
4. **Implement Solutions:** Put the chosen solution into action.
5. **Evaluate the Solution:** Check if the solution worked as planned.
6. **Continuous Improvement:** Keep looking for ways to make things even better.

In simple terms, it's a step-by-step guide to find a problem, fixing it, and then making sure it stays fixed.

20. EXPLAIN THE SOURCE OF THEORETICAL?

Theoretical sources refer to the foundational ideas, theories, or frameworks that guide research or study within a particular field. These sources can come from:

1. **Academic Literature:** Published works by scholars and researchers that include theories, models, and frameworks developed through systematic inquiry.
2. **Philosophical Works:** Contributions from philosophers that offer fundamental concepts or principles related to the subject matter.
3. **Historical Texts:** Previous studies or ancient texts that have shaped the understanding and development of specific theories.
4. **Cultural and Social Contexts:** Cultural beliefs and social norms can influence theoretical perspectives and ideas.

5. **Interdisciplinary Insights:** Sometimes theories are borrowed or adapted from other fields or disciplines, integrating knowledge across subjects.

In essence, theoretical sources are the building blocks that provide the underlying rationale or explanation for a phenomenon. They guide the way researchers or practitioners understand, analyze, and interpret their field of study.

21. DIFFERENCE BETWEEN HOMOGENEOUS AND HETEROGENEOUS TEAM?

A **homogeneous** team consists of people who are similar to each other in background, skills, or ideas. A **heterogeneous** team is made up of people with different backgrounds, skills, or ideas. The former may lead to easier communication but less creativity, while the latter can foster more innovation but might have communication challenges.

22. DIFFERENCE BETWEEN REFLECTIVE AND REFLEXIVE WRITING?

Reflective writing focuses on examining and understanding personal experiences and how they shape your thoughts and learning. It's about looking back and analyzing what happened.

Reflexive writing, on the other hand, goes a step further by considering how your own beliefs, values, and biases might influence your thoughts and actions. It's a deeper self-examination that includes questioning your underlying assumptions and how they affect your interpretations.

So, reflective writing is about what you did and what you learned, while reflexive writing delves into how your personal context influences your thinking and actions.

23. COMMUNITY PRACTICE IN SCHOOLS?

Community practice in schools refers to the collaboration between schools and the local community to enhance the educational experience and often to address broader social issues. Here's how it generally works:

1. **Partnership with Community:** Schools build partnerships with local organizations, families, and community members. These partnerships are geared towards creating a supportive environment for students and often extending learning beyond the classroom.
2. **Real-World Learning:** Students might engage in projects that solve real community problems, fostering a sense of responsibility and connection to their local community.
3. **Family Engagement:** Encouraging families to be involved in their children's education can strengthen the home-school connection, making learning more relevant and supportive.

4. **Utilizing Community Resources:** Schools can bring in local experts, utilize community centers, or engage with local businesses to enhance the curriculum and provide students with diverse learning experiences.
5. **Service Learning:** Students may be encouraged to participate in community service activities, learning through active contribution to their community.
6. **Supporting Broader Community Goals:** The collaboration between schools and the community can also work towards broader societal goals like increasing literacy rates, improving public health, or supporting community development.

Community practice in schools is about creating a synergy between educational institutions and the community they serve. It can make learning more engaging and relevant for students and allow schools to become a more integral part of the community's fabric. It might be particularly aligned with your interest in medical health, as community practice often involves health and wellness initiatives.

24. **TEACHER DEVELOPMENT MODEL?**

A teacher development model refers to a framework that guides the growth and improvement of a teacher's skills and knowledge. It often includes ongoing training, mentorship, reflection, and practice, aimed at enhancing teaching methods and understanding of student needs. The goal is to continuously improve the quality of education provided.

25. **BENEFITS OF PEER OBSERVATION?**

There are several benefits from using peer observation:

- ❖ Maintaining and enhancing teaching quality and therefore improving student learning Experiences
- ❖ Developing self-awareness about a variety of instructional aspects
- ❖ Reflecting on various aspects of your teaching practice
- ❖ Recognizing and identifying good practice in others
- ❖ Identifying your own professional development needs
- ❖ Providing evidence of quality teaching practice for promotion applications
- ❖ Identifying and promoting good practice and innovation in teaching and learning
- ❖ Deepening understanding of the work of colleagues in and across teams, departments and Faculties
- ❖ Networking with colleagues to discuss various learning and teaching issues
- ❖ Increasing the sense of collaboration and enhanced trust through allowing colleagues to observe And comment upon each other's teaching

26. **SIGNIFICANCE OF SELF-REGULATED TEACHER?**

The concept of a self-regulated teacher refers to a teaching professional who takes personal responsibility for their continuous learning and professional development. Here's why this is significant:

1. **Professional Growth:** Self-regulated teachers actively seek opportunities to enhance their skills and knowledge. They set goals, plan their development, and reflect on their practice, leading to continuous improvement.
2. **Adaptation to Change:** The educational landscape is ever-changing. Self-regulation allows teachers to stay current with new methodologies, technologies, and educational trends, ensuring that their teaching is relevant and effective.
3. **Responsive Teaching:** By reflecting on their teaching and assessing their strengths and weaknesses, self-regulated teachers can adapt their strategies to meet the diverse needs of their students.
4. **Positive Impact on Students:** The habits of self-regulation can be modeled and taught to students, promoting a culture of lifelong learning. By seeing their teacher as an active learner, students may be inspired to take responsibility for their learning as well.
5. **Enhanced Job Satisfaction:** Engaging in continuous professional growth can lead to increased confidence and satisfaction in one's teaching role.
6. **Contribution to the Profession:** Self-regulated teachers often contribute to the broader educational community by sharing their insights, research, and best practices with colleagues.

27. SELF DIRECTED LEARNING?

Self-directed learning is when a person takes charge of their own learning process, choosing what and how to learn. Unlike traditional learning, where a teacher guides the process, self-directed learning allows the individual to decide their path, often exploring subjects that interest them at their own pace.

28. SELF REGULATED LEARNING?

Self-regulated learning is when a learner takes control of their own educational process. This involves setting goals, monitoring progress, and adjusting strategies as needed. Essentially, it's about being proactive and responsible for one's own learning journey.

BEST OF LUCK
