Year 2018 (only one paper is available)

How biological

simulation help society.

Difference between FASTA and BLAST.

Protein infolding.

Advantages and disadvantage of Ab initio.

Improvement of chou Fasman algorithms.

How chou fasman predict alpha helix structure.

Explain the formula of scoring matrix.

Papers before year 2018

pK and pH value, coding of proteins, phylogenetics tree and to determine its way, slicing fragmentation, forces acts on proteins, scoring peptides sequence, loops, chou fasman algorithm

Greenhouse effect and its causes, survivor curves, species hotspot, bio magnification, eutrophication, benefits and drawback of cockroach, biological component of phosphate, effects of water pollution, difference direct indirect exploitation

What is autoradiography.

Does plasmid derived from colE1 belong to restricted or broad host range plasmid.

What is green biotechnology give an example.

What do you mean by orthologs in comparative genomics.

What is the role of microarrays in human health problem.

What is the advantage of using low molecular weight plasmid for cloning.
