1. Explain the role of gender as an equity issues in education.

Ans:

Next equity issue is based on gender. Gender equity has been an issue in Pakistan and it still is.

The disadvantaged group is females.

Their opportunities for success in education

It means that even if girls come to school, they are not allowed to take subjects / fields that they

will like to get in. For example, physics, teachers and parents do not appreciate girls taking physics

as subject. If girls are provided with proper education then they can be responsible citizens of

Pakistan.

The statistics related to the number of primary schools, teachers, literacy rates, and net enrollment

rates is given as under for better understanding.

Why and how the female students be the disadvantaged group at all level be it schools, colleges,

and universities.

Schools

The number of primary schools for both boys and girls is important. It is required in order to ensure

equality in education. Here is the list of schools in Pakistan. The breakdown is given province

wise.

2. Write about population debate

Population phenomena affect so many aspects of life at so many different levels ---- political

relations, resources, the environment, food and nutrition, health, social services, education,

employment, human rights,---- that nations, regions and individuals have differing viewpoints about population questions. "The consideration of population problems cannot be reduced to the analysis of population trends only. It must also be borne in mind that the present situation of the developing countries originates in the unequal processes of socio economic development which have divided peoples since the beginning of the modern era. This inequity still exists and is intensified by lack of equity in international economic relations with consequent disparity in levels of living. Different population structures and different levels of development combine to make developing and industrialized nations view similar social issues from different angles.

3. What do you know about progress planning

Ans

4. Write a note on equity in evaluating privatization programs

Ans: **Equity**

This criterion refers to a universally accepted goal of schooling: the quest for fairness in access to educational opportunities, resources and outcomes by gender, social class, race, language origins and geographical location of students.

Equity can be assessed in terms of inputs --- do all students receive an appropriate amount of funding and resources from the state, commensurate with their needs? Do students with special needs get appropriate schooling?

5. Explain how technology enabled education in boosting engagement by promoting interests and participating through the enablement and enforcement of interaction between the students?

Ans:

6. Highlights the elements of curricula while looking at the peace education history? some elements of the curricula

- an understanding of war and its causes
- an understanding of violence and its causes knowledge of the military and its structures
- an understanding of some principles of world order, including the united nations system
- an understanding of the role of citizen participation

7. What is Livingstone (2001) view on formal ,Informal and no formal learning of Adults?

Formal, Informal & Non-Formal Learning of Adults:

Formal education occurs when a teacher has the authority to determine that people

designated as
requiring knowledge effectively learn a curriculum taken from a pre-established body of knowledge
whether in the form of age-graded and bureaucratic modern school systems or elders
initiating
youths into traditional bodies of knowledge
Non-formal or further education occurs when learners opt to acquire further knowledge or skill by
studying voluntarily with a teacher who assists their self-determined interests, by using an
organized curriculum, as is the case in many adult education courses and workshops.

8. Explain the persuasion and prescription in relation to population education?

No education system, anywhere in world is free from some degree of persuasion and prescription,
despite the theoretical commitment to truth telling. Training for citizenship and developing the
sense of being part of a nation usually involves elements of conditioning. Furthermore, no
educational process can be totally value free, because any selection of facts involves conscious
and unconscious value choices.
Population education faces these general problems and is also potentially confronted with a more
direct conflict between theory and practice: the degree to which the educational system can or should
directly support the population policies of the nation.
If the government has determined that the small family shall be the norm, or that migration must
take place in order to relieve dense population, or that country's population should increase, what
is the proper and possible role of the educational system?

9. Discuss how to make financing in private education more effective?

The data available to answer these and similar questions related to financing of private education
is insufficient and whatever is available is too much scattered.
The deficiency of data is evident from the fact that the most comprehensive set of financing
statistics are available only in the Census of Private Educational Institutions 1999-2000. Since then, considerable changes might have occurred in trends and patterns of investment,
receipts and expenditure of private educational institutions but it is difficult to analyze those
changes because National Education Census 2005 and NEMIS haven't collected this

information.

The Census 1999-2000 showed that annual investment by the private sector was Rs. 2.5 billion whereas the recurrent expenditure amounted to about Rs.12 billion in the year preceding the Census.

10. What are the student adjustment Mitigation strategies?

Many environment-friendly schools around the world have incorporated EE into their design, operation and curriculum.

The most common strategies are:

Incorporating EE into the curriculum, with adaptations for the local context. Lessons on key climate

change topics such as global warming, the greenhouse effect and weather-related disasters are not enough.

At-risk communities must develop local adaptation policies and practices, addressing disaster risk

reduction, emergency preparedness and locally relevant sustainable development options.

A nationally significant, child-focused, participatory approach works best. In South Africa, for example, stakeholders including the National Environmental Education Program and the weather service designed curricular material for climate change.

The tools included resource guides, training workshops, a competition among schools and a national media campaign

Strategies to raise awareness: Media campaigns, messaging through youth radio programs, theatre and music, conferences, environment day celebrations, and other events and programs within and outside of school can complement formal curricula and significantly strengthen learning.

These strategies require collaboration with non-governmental organizations and the private sector.

In Albania, for example, the Child-Led Environmental Education Initiative created a partnership with

local companies that introduced schools to recycling, curricular reform, teacher training and a communitywide media campaign.

As a result, nearly half of the children in selected schools adopted at least one environmentallyfriendly behavior at home.

11. Write about the articles 37 B of the constitution of Pakistan 1973 about?

1973 the constitution says ***that state shall remove illiteracy and provide free and compulsory secondary education Article 37B***

12. Explain migratory population trends?

Migratory population shifts ---- which are seldom anticipated or planned for ---- place an extra burden both on the area receiving inhabitants and on the area from which the migrants have come.

In the typical situation, rural areas in developing countries lose their better education youth ---- the

people most capable of future leadership and innovation to the cities. Migration may so seriously cripple a community that it is forced to discontinue its services and cut back employment opportunities.

13. Write a short note on demand side pressure?

ANS: In many countries, education is viewed as an important way to gain social and economic advancement. Therefore, the demand for education is high, and if governments cannot afford to provide and fund quality education, then parent seeks private suppliers. This type of demand is 'excess demand', over and above what is provided by the government. In addition, many parents want for their children an education different from that offered in public schools. This is 'differentiated demand' and it may encourage privatization across all three sectors.

1. Q. prevalence of madrassa education in Pakistan

The Madrassa Education has been prevalent since the time of Prophet Muhammad PBUH in the Muslim world. The examination of the status of madrassa in Islamic history testifies to its success due to strong sense of respect among the Muslims for 'Knowledge'.

' In the initial days of Islam, the aim of religious seminaries or Madaaris was preservation and spread of knowledge.

' Meanwhile it has been highlighted time and again that there is a need to reform the madaaris to transform the radical ideologies with real Islamic moderate values, and provide an applied education mode where madaaris students become useful members of the society

2. Q.Eu definition of non-formal learning

Learning that is not provided by an education or training institution and typically does not lead to certification. It is, however, structured (in terms of learning objectives, learning time or learning support).

3. Q.what is privatization

‘Privatization’ is also thought of as ‘liberalization’ --- where agents are freed from government regulations, or as ‘marketization’ --- where new markets are created as alternatives to government services or state allocation systems

4. Gender difference in school

Gender Differences:

‘ There is the great difference in the rates of enrollment of boys, as compared to girls in Pakistan.

‘ According to UNESCO figures, primary school enrolment for girls stands at 60% as compared to 84% for boys.

‘ The secondary school enrolment rate stands at a lower rate of 32% for females and 46% males.

‘ On July 09, 2012 the Senate passed a law on ‘The Right to Free and Compulsory Education’.

‘ All over the world poverty is the main cause of low literacy rate.

‘ Now for the literacy rate compared to Sri Lanka and India that stand at a literacy rates of 91.2% and 61% respectively, Pakistan is lumbering at a mere 57.8%.

‘ Only less than 2% invested in the Education sector.

‘ Pakistan has also remained one of those few countries where education falls under the federal government

5. Gender discrimination in school

6. What is population education and explain its traces

Population education is not an attempt to develop a new discipline. Although demography and folk demography form the core of knowledge needed for population education, they do not cover the whole range of issues involved. Facts, theories and concepts from a broad spectrum of academic disciplines and professional fields are needed to help individuals and societies fully understand population interactions and thus the effect of population factors on the quality of their individual and collective lives. The sum of this knowledge is referred to as population studies.

7. Role of research in population education.

Systematic research – investigations that might survey, for example the relevant literature

concerning the nature of the learner and his learning context.

Population education is not an attempt to develop a new discipline. Although demography and folk demography form the core of knowledge needed for population education, they do not cover the whole range of issues involved.

8. Q freedom of choice for parents

9. Q .Billet in formal learning

Billet (2001): There is no such thing as informal learning. All learning takes place within social organizations or communities that have formalized structures. Informal Learning is organic or holistic, engaging the whole person, so that intellect, emotions, values and practical activities are blended.

10. Hanger learning.

Informal learning is not only more common, but also more effective than formal learning

11. Q demand side pressure

12. Q non formal education

Defines the dimensions of non-formal learning:

- the timing of stimulus (past, current, future)
- the extent to which such learning is tacit (tacit, reactive or deliberative)
- to the extent to which learning is either individual or social
- to the extent to which learning is either implicit or explicit

Eraut's definition of non-formal learning is based on an investigation into learning in the workplace

13. How teacher can change rigidity into flexibility in school

Strategies for developing accessible curricula

1. Providing a flexible timeframe for students studying particular subjects
2. Giving greater freedom to teachers in choosing their working methods
3. Allowing teachers the opportunity of giving special support in practical subjects (e.g. orientation, mobility) over and above the periods allotted for more traditional school subjects.

4. Allotting time for additional assistance for classroom based work
5. Emphasizing aspects of pre-vocational training

14. How technology reduce geographical region for learning

Equity

This criterion refers to a universally accepted goal of schooling: the quest for fairness in access to educational opportunities, resources and outcomes by gender, social class, race, language origins and geographical location of students.

Equity can be assessed in terms of inputs --- do all students receive an appropriate amount of funding and resources from the state, commensurate with their needs? Do students with special needs get appropriate schooling?

Mcqs mostly from files and 5 mcqs from mid

Subjective imran wali file sa

1.Demand side pressure 2

2.Two assumption of

1. Conflict is ubiquitous
2. There are ways to transform it

3.peace education

Peace education is the pedagogical efforts to create a world at peace.

By peace, we mean more than the absence of violence (negative peace). Peace in its most positive aspects embraces ideas of justice, global sustainability and the eradication of structures that promote insecurity: poverty, hunger, malnutrition, and lack of access to resources.

4.Two concern Freedom of choice

Two possible concerns arise as a result of greater freedom of choice for parents. The most important is the possibility that some choices are socially, culturally, or politically unacceptable.

For

example, a family may choose to educate its children in a manner intolerant to others in society,

or

it may choose an education that is segregated from other groups (e.g. by race, religion or income).

The other concern is that, even for those who value freedom of choice, the costs of deciding which school to go to --- or to change to --- may be high.

5.Role of environmental friendly school

EE encourages students to research, investigate how and why things happen, and make their own decisions about complex environmental issues. By developing and enhancing critical and creative thinking skills, EE helps foster a new generation of informed consumers, workers, as well as policy or decision makers.

6. Health care issues in

Next issue that we will discuss is health. Different family backgrounds, different cultures, financial situation all this helps in determining what kind of health facilities your family is able to provide to you. Without proper health care a child will not be able to make it through even the primary years of education.

If you have good health you are able to do a lot. Of course good health comes from lots of factors like:

food, nutrition, exercise, relaxation all of these contribute in good health.

Inequality and social conditions give rise to unequal and unjust health outcomes for different

social units. We may have health facilities but more detailed facilities like medicine, injections, x

rays are not available. Government health care facilities do not guarantee proper health treatment.

Private health care facilities are frightfully expensive. Again you are not able to afford that you will not be able to do well for your children and the children will not be able to do in education.

Poor nutrition includes poor protein intake children performed less in the achievement test.

Protein is what human muscles are made of. Students who get more protein perform well in the

achievement tests. **Iron** is an important part of the hemoglobin of the blood, less iron includes less

energy and hence not able to get good education.

Along with malnutrition the problem is of **obesity**. Obesity comes in the families are

privileged, where food is rich, they get fat/ obese. Children with obesity also get teased in schools, resultant in low self-esteem. When children get bullied like this they miss at the schools.

Physical environment is also important. You need to get exercise in the parks. Who can

go there, of course people from good families?

Mental tasks such as concentration, memory recall can be compromised if you do not have

good quality air in the room, poor ventilation, humidity can also affect your learning. Poor

ventilation can cause a decline in the performance of the teacher as well as of the schools. Many

schools do not have even windows in the classrooms; such environment is not conducive for learning to happen

7. Population studies

Population studies is broadly defined as the scientific study of human populations. Major areas studied include broad population dynamics; fertility and family dynamics; health, aging, and mortality; and human capital and labor markets.

8. Decision making

Few individuals make population-related decisions outside a group context and in many cases, the decision-making unit is the group itself, such a large family unit in Pakistan or a street committee in the local villages.

Less obvious but equally significant is the impact which the group has upon decisions made by individuals and within families. Clarifying these influences is part of the process of creating informed decision-makers. In all cases, the aim is to increase understanding of the interrelationships between macro and micro units of the society .

However, the range of options that are theoretically open to individuals and groups may, in reality,

be quite limited due to lack of equity and social justice and to the presence of cultural norms, traditions and taboos.
