Question No: 41 (Marks: 2)

Find harmonic mean (HM) of 10,12,14,17

Question No: 42 (Marks: 2)

If you toss a die and observe the number of dots that appears on top face then write the events that the even number occurs.

Solution:

Number of Possible outcomes = 6

Number of Events = 3

$P = \text{Number of events} / \text{Number of all Possible outcomes.}$

$P = 3/6$

Question No: 43 (Marks: 2)

Define Cumulative Poisson distribution.

Solution:

A cumulative Poisson distribution is used to calculate the probability of getting atleast n successes in a Poisson experiment. Here, n is the Poisson random variable which refers to the number of success.

Formula:

$$P(x < n) = P(x = 0) + P(x = 1) + \dots + P(x = n)$$

where, $P(x = 0)$ and $P(x = 1)$ is calculated using Poisson distribution formula.

Question No: 44 (Marks: 3)

Four friends take an IQ test. Their scores are 96, 100, 106, 114. Which of the following statements is true? Give reason.

- I. The mean is 103.
- II. The mean is 104.
- III. The median is 100.
- IV. The median is 106.

- (A) I only
- (B) II only
- (C) III only
- (D) IV only
- (E) None is true

Solution:

The correct answer is (B). The mean score is computed from the equation:

$$\text{Mean score} = \frac{\sum x}{n} = (96 + 100 + 106 + 114) / 4 = 104$$

Since there are an even number of scores (4 scores), the median is the average of the two

middle scores. Thus, the median is $(100 + 106) / 2 = 103$

Question No: 45 (Marks: 3)
