BT101 MIDTERM & FINALTERM MCQS & QUIZ SOLVED

MIDTERM MCQS

1. Subset of the food-web ---------- is impacted by a change in population Number (dynamic)
2. Y-axis is a logarithmic plot of numbers of survivors X-axis is a linear plot of (age).
3. The first community to become established in an area is called (pioneer community.)
4. Which animal change it color rapidly (chameleon)
5. Plant algae and cyanobacteria are (photo autotrophs)
6. Plants are (autotrophs)
7. 3 oxygen atom form (ozone.)
8. above thermosphere is (exosphere)
9. Second layer (stratosphere)
10. This process of evaporation through plant leaves is called (transpiration.)
11. ----------are species that occur outside of their natural ranges because of human activity Exotic Species)
12. Deforestation directly affects rate of (transpiration).
13. • Pere David's deer was a native species of (China).
14. • mutualism is Long-term relationship between individuals of (different species)
15. High population -------- can lead to the accumulation of harmful waste products that kill individuals or impair reproduction, reducing the population's growth. (densities)
16. The maximum population -------the species that the environment can sustain indefinitely. size of

SOFIA FATIMA

Scanned by CamScanner

17. Gross primary productivity Gap Raw rate at which the ---------synthesize new organic matter.(primary producers)

18. Interaction as a system between both components ----------. Non living components

19. --------- is a group of individuals belonging to same species occupying same space in a particular. Population

20. ---------- is a group of population occupying same space in a particular time. Community

21. The external factors are ----------. Climate and topography

22. Formed in response to specific external factors in that environment ---------- . Biome

23. Animals use ----------energy to make organic molecules. Chemical energy

24. Synthesis of organic compounds of their bodies from inorganic precursors ---------- Autotrophs

25. The process occurs in dark habitats --------- . Chemoautotrophs

26. There are -------- types of herbivory depending upon different feeding habits. 8

27. Plant and food is the primary source of ---------. Ominvores

28. Breakdown of tissues by the body's own internal chemicals and enzymes is called ---------- Autolysis

29. Breakdown of tissues by bacteria is called --------. Putrefaction

30. Freshwater ecosystem is the main source of ----------

31. Measurements of species per unit area are called ---------. Species richness

32. Geographic limit causes the size of a population ----------. Decrease

33. The species occupation in its environment is tremendous-----. Beavers

34. Butterflies are one of the best examole of----------. Indicator species

35. Response of an organism towards an abiotic stimuli--------. Taxi (light)

36. The main environmental force that influence the terrestrial plants-----. Gravity

37. Examples of primary consumers ------.zooplankton, cow, zebra, rabbits, deer, etc

Scanned by CamScanner

38. The living portion of earth surface is named as -------. Biosphere

39. A population increase by immigration and decrease by ---------- or departure of individuals from the population. Emigration

40. The population density of small organism is --------. High

41. Currently human population is about ----------. 7.4 billion

42. Division of freshwater ecosystems are ----------. Lotic and lentic water bodies

43. The large natural bodies of standing freshwater found by precipitation on run off ar----------. Lakes

44. Corals are tiny living animals belong to group of organisms --------. Cnidarian

45. Aestivation is commonly occurred in -------- many invertebrates, reptiles and amphibians

46. Plant names Viola Orvensis is present in ----------. Basic soil

47. Species having wider range of niches ----------. Generalist species

48. Panda is an example of ----------. Specialist species

49. Who plays role of ecological engineers in ecosystem. beavers

50. Hawk is example of ----------. Tertiary consumer

51. Nitrogen in ----------% in atmosphere. 78%

52. The process of making carbohydrates from water and carbon dioxide is called ----------. Photosynthesis

53. Plays a major role in shaping communities ----------. Foundation species

54. Top most horizon is ----------. O horizon

55. The species occupation in its environment is tremendous --------. Beavers/ foundation species

BT101 Quiz-1

1- Oxygen made stable --------- of atmosphere. 15%

2- The resemblence of ---- species to another for protective or aggressive purposes. One

3- In troposhere drop in vapour pressure is due to -------- Gravity

4- Temperature increased due to absorption of Sun's ultraviolet radiation by the ---------- Ozone layer

5- Atmosphere holds around 12900 cubic km of -------- at any given time. Water

6- Ionosphere produced in ----------. Thermosphere

7- 12-50 km layer of atmosphere is ---------. stratosphere

8- Oxygen was produced -------- billion year ago. 2.5

9- In aposematism advertisement of signals includes -- Color, Odour, Sound All of above

10- Polar aurora is observed due to entry of solar ----------. Winds

BT101 Quiz -2

1. -------- gas is continuosly formed by the action of VU rays on molecular oxygen and also degrated into molecular oxygen in the stratosphere. Ozone
2. Which chemicals is responsible for the destruction of ozone layer. CFCs
3. The --------- cycle is slow compared to the water, carbon and nitrogen cycle. phosphorus
4. What is the percentage of carbon dioxide which make the volume of the atmosphere. 0.038%
5. During waste management ---------- material as plastic, glass, metal scrap are sent for recycling. Non-biodegradeable
6. Which of the following is not an effect of ozone layer destruction. Diabetes
7. Which of the following gas is released from active volcanoes. Sulphur dioxide
8. The short term climate change is the so called El Nino effect which occur every ---------. 2 to 7 year

Scanned by CamScanner

9. Irreparable computers and other elecyronic goods are known as ----------. E-wastes
10. During climate change in 1991 ---------- tons of SO2 gas erupted into the stratosphere. 20000000
11. Which is the major reserviors for phosphorus is ----------. Phosphate salt
12. ---------- water refer to every thing that goes out into trash. Solid
13. Which one of the following element is the basic building block of carbohydrates , fats, proteins, DNA and other organic compounds necessory for life. Carbon
14. Lysosome were discovered by the Belgian Cytologist de Duve in -------. 1951
15. Evolutionary changes whether over long period or rapid are result of gene in --------- make up. Genetic
16. Named after Camilo Golgi an --------- biologist who discovered the organelle with a light microscope in 1897. Italian
17. Major mechanism through which ---------- genetic material is generated during molecular evolution. New
18. In allopatric speciation a species population becomes separated by a ---------- barrier whereby reproductive isolation evolves producing two separate species. Geographical

BT101 FinalTerm MCQs

1- We can introduce new species by ---------- group animal, domestic animal. Both
2- Zone of leaching is ----------. A horizon
3- Main type of population dispersion --------- Uniform, clumped, random. All
4- Autogenic succession is controlled by ---------- Biotic component.
5- A tough semantic layer developed into groups ----------. Caliches
6- Plant use sunlight direct in process of --------. Photosynthesis
7- Types of ecological plasmids are ----------. Three
8- Term ecological was used by -------. Ernst Hackal
9- Insects pollinated flowers are usualy -------- in color. Yellow or blue
10- Which can eat both plants and animals ----------. Omnivores
11- Average temperature of earth has river between -------- degree. 0.4 and 0.8
12- On the basis of climate soil is divided into ------- groups. Two
13- Stratospheric zone has -------- of zone. 90%
14- Human has half of water --------. Fresh
15- Cause of zone destruction is --------. Chloroflorocarbon

Scanned by CamScanner

16- Main reason of species extinction is ---------. Habitat loss
17- Ecosystem is influenced by both --------. Internal & external factors.
18- Types of biodiversity------- alpha, beta, gema diversity
19- Red blot is caused by -------. Deutromycete
20- Forms of mutualism are -------. 1-Lichen, 2-Mycorihze, 3-Root nudule
21- Forms of lichens are ------- 1-Crustose, 2-Foliose, 3-Fruiticose
22- A mutual relationship b/w fungi and roots of higher plants by which both partner get benefited is called --------. Mycchorizae
23- -------- is a mutual association b/w nitrogen fixing bacteria and roots of plants of legume family. Root nudole
24- A mutual association b/w algae and fungi in which both partner get benefit from each other is known as ---------. Lichen
25- ------- is a kind of association in which one organism called parasite lives on expense of of other organism called host. Parasitism
26- Examples of endoparasite is --------. Hook worm
27- Anosemtic coloration is called ------- Warning coloration
28- Types of biomes are ---------. 5
29- Divisions of fresh water are ---------. 2
30- -------- consist of earth of salt water. 97%
31- Co2 make upto ---------- of atmosphere. 0.038%
32- Water cycle consist of process --------. 1-Evaporation, 2-Transpiration, 3-Precipitation
33- A long term increase in excess nuterients into an ecosystem cause higher biological activity is known as ---------. Eutrophication
34- Forms of air pollutants are ----------. 1-Solid particles, 2-Gases, 3-Liquid droplet.
35- -------- toxic of So2 gas erupted into stratosphere. 20000000
36- ------- is the average temperature of earth suface increasing day by day due to increase in concentration of green house gase in atmosphere. Global warming
37- Term biodiversity was used by ---------. Raymond of dash man
38- -------- species of animals are recoroled. 70%
39- Mucor is an example of ----------. Phycomycetes
40- -------- sucession is a sucesion driven by the abiotic component of ecosystem. Allogenic
41- --------- sucession is driven by the biotic component of ecosystem. Autogenic
42- Cage song is example of ---------. Indicator species
43- The word ecosystem was coined by ----------. Tansly
44- The condition at which organisms are most sucessful in survival ----------. Range of optimum
45- Land producer captures --------- of solar radiation. 1%
46- Cockroaches are example of ----------. Omnivores
47- Volume of nitrogen in atmosphere is --------. 78%
48- -------- is an animal that is depend on external sources of body heat. Ectoderm
49- Hibernating animals have ----------. Low body temperature
50- Human eye can detect electromegnetic radiations of wavelength range from ----------. 360-760nm
51- Huming birds are example of ----------. Co evolution
52- Types of soil -------. 2
53- Heliconius are an example of ---------. Mimicy

Scanned by CamScanner

54- Abbreviation of DMS is --------. Dimetyl sulfide
55- Kinds of air pollution are ---------. 6
56- CFCs destroy the --------- layer in the atmosphere. Ozone
57- Recorded species of animals are ----------. 70%
58- Which animals eat the 75 pond food in a day ----------. Girafa
59- Comma shaped bacteria are ----------. Vibrio
60- Examples of thermophiles are --------.Thermus aquaticus & Thermococus litorals
61- ------- is a condition in which rate of metabolism, circulation and reparation of individual decrease when they are not feeding. Torpur
62- -------- is the ability of living system such as grassland or a forest, to survive in condition of moderate disturbance. Inertia
63- --------- is a type of color patyern in animals in which there is a dark pigmentation on the upper surface and light on lower body surface. Counter Shedding
64- Some animals protects themselves by being dangerous or distateful to the predator by using prominent coloration, this color pattern is known as warning or ----------. Aposematic coloration
65- Protists were first used by --------- Ernst Hackal
66- Plasmodium is the characteristic of ----------. Slime mold
67- Mushrooms are examples of ----------. Basidimycetes
68- A group of species which are specified along the specified area is called ----------
69- Blind indus dolphin is example of ----------. Native species
70- Red Kangroo is example of ---------. Native species
71- Cockroach belong to --------- species . Generalistic
72- Carnivore fish possess ----------. Long stomach and short instestine
73- Ameoba belong to ----------. Protist (chrysophite)
74- Usually small organisms have -------- metabolic rate. High
75- Large organisms have -------- metabolic rate. Low
76- Plasmodium belong to ----------. Protist (slime mold & protozoa
77- Epiphytic plants are example of ---------. Orchids and bromeliads
78- Salinibactor is an example of ---------. Halophiles
79- Waterfowl by aircraft is example of ---------- pollution. Noise
80- The specific competition within the species ----------. Intraspecific competition
81- Scientists describes ---------- species. 1.8 million
82- The mutual association b/w fungi and roots nudole of legume family is called Root --------. Nodules
83- ---------- volume of organisms make up of carbon dioxide, nitrogen etc. ---------- 97%
84- Major components of ecology are ----------. 6
85- Beavers are example of ----------. Foundation speceis
86- Ecological engineers are ----------. beavers
87- Major producers of aquatic ecosystem are ----------. Diatoms
88- The area of shore line b/w high and low tiders is ----------. Intertidal zone
89- The rock part of earth core is called -------. mentle

Scanned by CamScanner

90- Blind indus is example of ----------. endemic species
91- Coal miners song bird is example of ---------. indicator species
92- Large scangers animals ----------. vultures
93- Thiobacilus is example of ----------. Chemosynthetic bacteria
94- Solid wastes categories in -------- types 3
95- The lake that has low nuterients ---------. Oligotrophic lake
96- Large amount of nuterients are present in ---------. Eutrophic lake
97- Lake having excessive amount of dissolved nuterients are ----------. Hypertrophic lake
98- Speices are introduced intentional way ----------. Both
99- -------- was introduced in Pakistan from china. Grass crap
100- -------- Exert stromg selective influence on the pray for better adaptation. Species
101- Which fish is best indicator of water quality. Trout
102- Monarch butterfly is an example of ----------. Keystone species
103- Frog is an example of ----------. Secondary consumer
104- Example of density dependent factor is ----------. Food
105- Normal body temperature of bird is ----------. 105f
106- Soil particles aggrgate to form stucture ----------. Clay
107- The ability of living system to surviver condition of moderate distribution ----Interia
108- -------- called imperfect fungi. Deutromycetes
109- During climate change in 1991 ---------- tons of So2 gase erupted. 20000000
110- Viola tricolar grows in -------- type of soil. Acidic
111- Sea star plays a role in sea as ----------. Keystone species
112- Element of biome are ---------. 5
113- Chlorofirocarbon are a serious threat to ---------- in atmosphere. Ozone level
114- Which class of bacteria is rod shaped. Bacillus
115- -------- is released by fossil fuels in the atmosphere. sulpher oxide
116- The basic cause of species extinction is ----------. habitat loss
117- More than 70% recorded species are ----------. animals
118- Total no of species are discovered by the scientist are ----------. 1.8 million
119- Mushroom is example of ---------. Basidiomycetes
120- -------- chemicals is responsible for depletion of ozone layer. CfCs
121- The earth is gradually heating up due to rise in temperature is called ----------. Global warming
122- The short climate charge is called El-nino effect which occur ---------- years. 2 to 7
123- Red tides is produced by ---------. Dinoflagellates
124- Waterfowl is example of ----------. Noise pollution
125- The term protista was first introduced by ----------. Ernst Haeckle
126- -------- of water vapors in the atmosphere comes from oceans. 84%
127- -------- is major reservior of phosphorus. Phosphorus salt
128- Spiders and poisonous snakes are examples of ----------. Chemical warfare

Scanned by CamScanner

129- Living matter of organisms are composed of carbon, oxygen, nitrogen and hydrogen are presentin ----------. 97%
130- Some animals protect themselves by being of dangerous or distateful to predators by using prominent coloration is called ------. Aposematic coloration
131- The kind of coloration that help in an animal to appear to blend with its surrounding called --------. camouflage
132- Parasitism is a kind of association in which one organism is called parasite lives on expanse of other organism called -------. host
133- Ascomycetes is example of ----------. mycorhizae
134- Form of mutualisms are of --------. 3
135- Insects pollinated flowers and huming birds are example of --------. co evolution
136- The ability of body source to do usefull work ---------. energy
137- Corals are tiny living organism that belong to group of organism called -------. Cnidarians
138- The part of ocean that is deep and away from costal zone is called ---------. open ocean
139- Hibernating animals possess --------. Low metabolic rate
140- The process of immigration cause pollution to ----------. increase
141- Frog is example of ----------. secondary consumer
142- --------- of sunlight gained by plant on land surface. 1%
143- Organism that feed on big process of dead organism are called -------. decomposer
144- Species which are intentionaly recognized into an ecosystem are called --------- ????.
145- Y axis is a logrithmic plot of numbers of suvivors X axis is a linear plot --------. Age
146- The --------- species living at desities closer to----------
147- There are concepts about complexity of community --------- and Holistic. Individualitic
148- Consumers of plants are --------- and physiologically adapted to eating plant material. Anatomically
149- Two or more species living in same habitat reciprocally --------- eacher others evolution. Affect
150- Atmosphere can be divided into ----------. Five layers
151- The second major layer of Earth's atmosphere is ----------. Stratosphere
152- --------- species are species that occur outside of their natural range. Exotic
153- Inherited variations arise by -------- mutation. Random
154- There can be outflow or inflow -------- in a gene pool. Genes
155- Average bacteria is --------- um in diameter. 0.5 - 2.0
156- Plants, algae and cynobacteria are example of ----------. Photoautotraph
157- Primary food source is animal based --------- . Carnivore
158- The net --------- of direct and indirect relation is called trophic cascades. effect
159- Orientation towards a factor --------- . Taxis
160- Evolutionary changes whether over long period or rapid are result of change in makeup ----------. genetic

Scanned by CamScanner

161- Named after Camilo golgi an ---------- biologist discovered ohe rganelle. Italian
162- Major mechanism through which genetic material is generated during molecular evolution. New
163- -------- short protein appendages smaller than flagella. Pilli
164- Cladogram depict a sequence in the --------- of derived characters. Origin
165- PER has ---------- attatched. Ribosomes
167- Photosynthesing bacteria that are related to chloroplast of eukaryotic plant and algae ---------. Blue green algae
168- Mitochondiya has its own ---------. DNA
169- Conditions in the reproductive------- of a female may not support the sperm of male. Tract
