BT-102

1: Which of the following enzyme is used by sense strand RNA virus in its replication?......RNA dependent RNA polymerase

2:The carbohydrate and protein complexes projecting from the surface of the envelope are called.....Capsomeres

3: Neurodegenerative diseases are caused by .....Prions

4: The infections which are acquired by hospitals is called.....Latent Infection

5: The first step in virus replication is .....Attachment

6:.....are normal microbiota that can cause disease under stress conditions.....Opportunistic Pathogens

7:The microbial communities that live in or on human is called .....Microbiome

8: The study of the occurrence of diseases and how they are transmitted is called ....Epidemiology

9:.....is the number of new cases and existing cases in a given time period in a population Endemic.....Incidence

10:.....is primarily an animal infection ,but can be transmitted to humans.Progonosis.....Zoonosis

11: The relation of organisms in which one organism is harmed is called.....Parasitism

12: Consistently present,but with low incidence of disease is termed as.....Endemic

13:.....cell culture can be used for the cultivation of viruses..... All(bacterial,animal,plant)

14:The disease which is present worldwide is called.....Pandemic

15:The production of nuleic acid and proteins occurs in .....step of replication of virus..... Biosynthesis

Asmat khan niazi

16:Number of people affected in relation to the total population in a given time period is termed as…….Morbidity rate

17:The disease which is present in an area with high incidence rate is called …..Epidemic

18: The extent of pathogenicity of an organism is called ….Virulence

19:Deaths from a disease is termed as ….Mortality

20:The relationship between two organisms in which both are benifited is called……Mutualism

21:Capsid Is made up protein subunits called ……Capsomers

22:Which of the following are used for culturing virus?..... (Animal,embryonated egg,plant and animal cultures)

23:The ability to cause disease is called …..Pathogenicity

24:Plaque formation is a method of viral …..Enumeration

25:The method of epidemiology in which hypothesis of a disease is tested is called …..Experimental epidemiology

26:The relation of organisms in which one organism is harmed is called ….Parasitism

27:In the replication of DNA viruses,a portion of viral DNA is transcribed and produces …..that encodes early viral proteins…….mRNA

28: The microbes which are permanent resident of human body but do not cause disease under normal condition…..Normal microbiota

29:The time between infection and disease is called ….Incubation period

30:Which of the following enzyme is used by sense strand RNA virus in its replication?....RNA dependent RNA polymerase

31:The dose which can kill approximately 50% of the cells or testing population is called ……TCID50

32:The sites where organisms of infections remain viable and act as source of infection is termed as …..Reservoir

33: The study of the occurrence of disease and how they are transmitted is called ….Epidemiology

Asmat khan niazi

34:….is a competitive exclusion by competition for nutrients or by chemicals ……Microbial antagonism

35:A …..is a pathogen infected individuals who does not show any signs or symptoms of the diseases……. Carrier

Asmat khan niazi
