Question No : 41 of 52

Marks: 2 (Budgeted Time 4 Min)

Discuss the situation in which we use GROUP BY clause ?

Answer (Please click here to Add Answer)

100% Normal Arial 12

The GROUP BY clause can be used in a SELECT statement to collect data across multiple records and group the results by one or more columns. It is added to SQL because aggregate functions (like SUM) return the aggregate of all column values every time they are called, and without the GROUP BY function it is impossible to find the sum for each individual group of column values.

Question No : 42 of 52 Marks: 2 (Budgeted Time 4 Min)

What are the two ways to create a new view in the database?

Create database view;
Create database bc120402425

Answer (Please click here to Add Answer)

100%

Normal Arial 12 B I U

create dataabse view;
i think so

There are two ways to create a new view in your database.
You can:
- Create a new view from scratch.
- Or, make a copy of an existing view and then modify it.

Question No : 48 of 52 Marks: 3 (Budgeted Time 6 Min)

Give an Example of Dead Lock.

Answer (Please click here to Add Answer)

Give one example of Deadlock. (Marks 3)
Answer:- Click here for detail
A simple computer-based example is as follows. Suppose a computer has three CD drives and three processes. Each of the three processes holds one of the drives. If each process now requests another drive, the three processes will be in a deadlock. Each process will be waiting for the "CD drive released" event, which can be only caused by one of the other waiting processes. Thus, it results in a circular chain.
