MGT510 FINAL TERM PAPER FALL 2017

Subjective part of the Final Paper for Fall semester 2017:

24 MCQs for objective part.

25) What are the reasons of analyzing the data? Describe any three.

26) It is advised for the organization to properly define and publish its quality policy, which forms one part of the corporate policy. What is the responsibility of top management regarding the content and communication of quality policy?

27) “To provide the consultancy, training, and facilitation necessary to assist with making continuous improvement is an integral part of our customer’s business strategy.”

From this statement identify one critical success factor (CSF) and a core process to achieve this CSF.

28) “Problem solving tools lead to process or product/service improvement”. Do you agree with the statement? Justify your answer.

29) Using the quality control tool of run chart, discuss how can it helps in managing absenteeism in a production based organization.

30) Prof. Peter Senge of MIT portrays organizational learning as going beyond the mere capture of knowledge and identifies five learning disciplines. Explain briefly any two of the learning disciplines.

31) ABC Inc. needs to determine what input is pertinent for the service to be designed and developed and to create requirements specification. List down the various inputs to the design and development process.

32) Maturity model has different levels and each one is associated with a specific set of characteristics and activities. Briefly state the characteristics of developing the system in the levels of organizational maturity?

www.ranapk.com

33) The Organizational Environment encompasses all the forces outside the organization's boundaries that can affect it. Provide examples of both "Opportunities" and "Threats" within the organizational environment context (Any five).

34) Proper consideration of the customer requirements is of critical importance for success of an organization. How can the customer requirements be converted to customer satisfaction by implementing house of quality or quality function deployment?

35) Limits are set in a process to measure and control the variations in it. How will you differentiate between control limits and specification limits?

36) What are the various pre-requisites that an organization must ensure for successful empowerment in your company

My Yesterday Paper: Total Questions 55

46 MCQs (20% from Shazad Saqib file, uploaded & rest were new)

(4 questions of 3 marks, 5 questions of 5 marks)

Question of 3 Marks:

1. Why effective communication is important with customer and suppliers to assure business excellence?
2. For Small and medium scale firm which usually do not enjoy brand image, what benefits do they enjoy from the implementation of ISO system?

www.ranapk.com

3. Responsibilities of sponsor in a core process?
4. How scatter diagram assist in finding solutions to quality problems?

Question of 5 Marks:

1. Role of management in implementing quality strategy?
2. Importance of Marketing function, and how marketing helps to determine market needs and customer expectation?
3. Various input to the design and development process?
4. Procedure of getting ISO 900:2000 certificate?
5. Concept of Uniformity around targeted value in context of variation, discuss with the help of example?

Please read carefully sllybus, don't be depended on past papers, kind advise for all... best of luck..!

MGT510 FINAL TERM PAPER SHARED BY STUDENT

ON MARCH 5, 2015 AT 10:51PM

Total Questions: 50

Total Marks : 80

MCQS: 40

Subjstive Questions: 10

5 Questions Of 3 Marks

5 Questions Of 5 Marks

www.ranapk.com

1. People usually go through four stages when learning new concepts or skills. Suppose you are learning to play a video game for the first time, explain briefly any three stages of learning 3marks As individuals must continue to learn, so must organizations. Prof. Peter Senge of MIT portrays organizational learning as going beyond the mere capture of knowledge to include gaining a deeper and complete understanding of how things work, and involve five learning disciplines:

1. Personal Mastery---a continual drive for personal and organizational development.
2. Mental Models---understanding how our cognitive schema affects our view of the world, and continually improving the accuracy of the model.
3. Shared Vision---working jointly toward a common view to which all aspire.
4. Team Learning---the use of dialogue to move beyond mere conversation to true joint understanding.
5. Systems Thinking---understanding the multiple cause-and-effect relationships and how they are interconnected in organizations, society and other systems.

2. How solution is planned and implemented in seven step of problem solving?

Seven simple statistically based tools are used extensively to gather and analyze data. Unlike the seven advanced management and planning tools, these tools are visual in nature and simple enough for anyone to understand.

These seven basic tools of quality are:

1. Flow-charts,
2. Check sheets,
3. Histograms,
4. Pareto diagrams,
5. Cause-and-Effect diagrams,
6. Scatter diagrams, and
7. Control charts

3. Benefits of Quality Function Deployment (QFD)? (5 Marks)

www.ranapk.com

QFD is an overall concept that provides a mean of translating customer requirements into appropriate technical requirements for each stage of product development and production. Voice of Customer is collection of all satisfiers, delighters/exciters and dissatisfiers i.e. WHAT part of a matrix that customers want from a product.

4. What are the various responsibilities of a steering committee and how can the leader of a team make the team members aware of the group process? 3

Most organizations practicing total quality have a steering committee, called a quality council by Juran and a quality improvement team by Crosby. Steering committees are responsible for establishing policy for TQ and for guiding the implementation and evolution of TQ throughout the organization. The top manager of the organization is usually on the steering committee, as is the manager with overall responsibility for quality- for example, the Vice President /Director of Total quality. The steering committee may meet fairly often when a TQ effort is getting started, but usually meets only monthly or quarterly once things are under way. This group makes key decisions about the quality process – how quality should be measured and what structures and approaches should be used to improve quality. The steering committee also periodically reviews the status of TQ and makes the adjustment necessary to ensure customer satisfaction and continuous improvement. In general, the steering committee has overall responsibility for the progress and success of the TQ effort.

5. What are the requirements of total quality for human resources and how can the managers ensure empowerment in the organization? 5

TQ HRM Requirements

- Empower individuals and teams
- Continually improve key personnel management processes
- Maintain a satisfying work environment
- Promote individual and group participation

For empowerment to occur, managers must undertake two major initiatives:

- Identify and change organizational conditions that make people powerless, and
- Increase people's confidence that their efforts to accomplish something important will be successful.

6. Standardization of Quality 5M

7. Prof. Peter Senge of MIT portrays organizational learning as going beyond the mere capture of knowledge and identifies five learning disciplines. Explain briefly any two of the learning disciplines.

8. Question about Maturity Level.

www.ranapk.com

9. How can the problem arising in quality control be solved by using creativity? (3 Marks)

10. what are the responsibilities of the top management in implementing a quality strategy? and how they gain an involvement with the others managers? 3 marks

MGT510 FINAL TERM PAPER SHARED BY STUDENT

ON AUGUST 31, 2014 AT 5:22PM

- **Financial perspective** - how does the firm look to shareholders?
- **Customer perspective** - how do customers see the firm?
- **Internal perspective/ business perspective** - how well does it manage its operational processes?
- **Innovation and learning growth perspective** – can the firm continue to improve and create value?
This perspective also examines how an organisation learns and grows.

For each of four perspectives it is necessary to identify indicators to measure the performance of the organisations.

More on the financial perspective This is concerned with the shareholders view of performance. Shareholders are concerned with many aspects of financial performance: Amongst the measures of success are:

- Market share
- Revenue growth
- Profit ratio
- Return on investment
- Economic value added
- Return on capital employed
- Operating cost management
- Operating ratios and loss ratios
- Corporate goals

www.ranapk.com

- Survival
- Profitability
- Growth
- Process cost savings
- Increased return on assets
- Profit growth
- Measures
- Cash flow
- Net profitability ratio
- Sales revenue
- Growth in sales revenue
- Cost reduction
- ROCE
- Share price
- Return on shareholder funds

More on the customer perspective How do customers perceive the firm?

This focuses on the analysis of different types of customers, their degree of satisfaction and the processes used to deliver products and services to customers.

Particular areas of focus would include:

- Customer service
- New products
- New markets
- Customer retention
- Customer satisfaction
- What does the organisation need to do to remain that customer's valued supplier?

Potential goals for the customer perspective could include:

- Customer satisfaction
- New customer acquisition
- Customer retention
- Customer loyalty
- Fast response
- Responsiveness
- Efficiency
- Reliability
- Image

www.ranapk.com

The following metrics could be used to measure success in relation to the customer perspective:

- Customer satisfaction index
- Repeat purchases
- Market share
- On time deliveries
- Number of complaints
- Average time to process orders
- Returned orders
- Response time
- Reliability
- New customer acquisitions
- Perceived value for money

More on the internal perspective

This seeks to identify:

- How well the business is performing.
- Whether the products and services offered meet customer expectations.
- The critical processes for satisfying both customers and shareholders.
- Activities in which the firm excels?
- And in what must it excel in the future?
- The internal processes that the company must be improved if it is to achieve its objectives.

This perspective is concerned with assessing the quality of people and processes.

Potential goals for the internal perspective include:

- Improve core competencies
- Improvements in technology
- Streamline processes
- Manufacturing excellence
- Quality performance
- Inventory management
- Quality
- Motivated workforce

The following metrics could be used to measure success in relation to the internal perspective:

- Efficiency improvements
- Reduction in unit costs

www.ranapk.com

- Reduced waste
- Improvements in morale
- Increase in capacity utilisation
- Increased productivity
- % defective output
- Amount of recycled waste
- Amount of reworking

More on the innovation and learning perspective This perspective is concerned with issues such as:

- Can we continue to improve and create value?
- In which areas must the organisation improve?
- How can the company continue to improve and create value in the future?
- What should it be doing to make this happen?

Potential goals for the innovation and learning perspective include:

- New product development
- Continuous improvement
- Technological leadership
- HR development
- Product diversification

The following metrics could be used to measure success in relation to the innovation and learning perspective:

- Number of new products
- % sales from new products
- Amount of training
- Number of strategic skills learned.
- Value of new product in sales
- R&D as % of sales
- Number of employee suggestions.
- Extent of employee empowerment

www.ranapk.com

Policy deployment 3

Qualities of team member 3

Quality control 3

Traditional view and quality perspective approach 3

MGT510 FINAL TERM PAPER SHARED BY STUDENT

1. What should be the responsibility of managers regarding Identification and Traceability of product?

Ø To enforce federal, state laws along with city ordinances

www.ranapk.com

Ø **to identify the product by suitable means throughout product realization**

Ø To implement the country's legal requirements for efficient transportation of people

Ø To apply new professional engineering approaches and techniques

2. Why is there a need for identification and traceability for control of products?

Ø Due to packaging materials

Ø Due to use of suitable equipment

Ø **Due to requirements for records**

Ø Due to risk mitigation

www.ranapk.com

3. What is the traditional view of quality?

Ø Quality is measured by establishing an acceptable level of conformance

Ø Quality is measured by establishing an acceptable level of employee satisfaction

Ø **Quality is measured by establishing an acceptable level of nonconformance**

Ø Quality is measured by establishing an acceptable level of both conformance and employee satisfaction

4. Customer needs must be linked to which of the following?

www.ranapk.com

Ø Organization's strategic planning, process improvement and finances

Ø **Product design, product development and process improvement and tax returns**

Ø Organization's strategic planning, product design and process improvement

Ø Process improvement, managerial planning, accounting tactics, and finances

5. When was the definition of total quality endorsed?

Ø In 1950

Ø In 1970

Ø In 1985

Ø **In 1992**

www.ranapk.com

6. When were the behavioral theories developed?

☐ 1930s

☐ 1940s

☐ 1950s

☒ 1960s

7. Edward Deming is best known for which of the following?

☐ Acquisition Integration Approaches

☒ Seven Deadly Diseases

www.ranapk.com

Ø Brand Personality

Ø ERG Theory

9. Which of the following is NOT a requirement of ISO 9001:2000?

Ø Processes to describe and monitor, what each customer wants

Ø Processes to measure and analyze customer satisfaction

Ø Demonstration of continual improvement of internal process and customer satisfaction

Ø **Environmental Policy to be in existence within the organization**

www.ranapk.com

10. All of the following are the responsibilities of top management EXCEPT:

- Ø Setting policies and objectives and leading the organization
- Ø Provision of organization structure and resources
- Ø **Maintenance of current performance**
- Ø Implementation of short-term plans and dealing with the routine work of their team

11. Which of the following is a follow up activity relating to internal audit?

www.ranapk.com

Ø Collection of quality cost data

Ø Questionnaires and surveys

Ø **Verification of implementation**

Ø Utilization of technologies

12. All of the following are the consideration of the organizations when analyzing how all the processes interact to make sure that all processes operate as an efficient network EXCEPT:

Ø Ensuring inputs, activities and outputs are clearly defined and controlled

Ø Managing risks and opportunities

www.ranapk.com

Ø **Monitoring inputs and outputs to confirm that, group processes are unrelated**

Ø Establishing data analysis that facilitates continual improvement across all processes

13. What should be the responsibility of managers regarding Identification and Traceability of product?

Ø To enforce federal, state laws along with city ordinances

Ø **To identify the product by suitable means throughout product realization**

Ø To implement the country's legal requirements for efficient transportation of people

Ø To apply new professional engineering approaches and techniques

www.ranapk.com

14. SPC focuses on the process to produce the output. The use of SPC results in the form of

☒ Both the consistency in product and satisfied customer

☐ Consistency in product only

☐ Satisfied customer only

☐ Fluctuation in customer's demands only

15. Attribute process control charts are used for:

☒ Defect Prevention

☐ Process improvement

WWW.RANAPK.COM

www.ranapk.com

☐ Defect Deductions

☐ None of the given options

16. Which of the following is used to detect changes in variation within sub-groups?

☒ X-Bar Chart

☐ R- Chart

☐ P-Chart

☐ C-Chart

17. Which of the following will fall in the category of non conformity if the range for the length of a yard stick is +, - 1000 mm?

www.ranapk.com

Ø Yard sticks which is 999 mm long

Ø **Yard stick which is 1001 mm long**

Ø Yard stick which is 1000.99 mm long

Ø Yard stick which is 1001.01 mm long

18. An effective team has all the characteristics EXCEPT:

Ø Goal centered

Ø Supportive

Ø Openness

Ø **self centered**

www.ranapk.com

19. Which of the following teams should be formulated if marketing department of ABC Company reports some problem regarding product design?

☒ **Steering committee**

☐ Self managed team

☐ Cross functional team

☐ Project team

20. Which of the following skills is most important for Self Managed Teams?

www.ranapk.com

Ø Conceptual skills

Ø Technical skills

Ø **Social Networking skills**

Ø Writing skills

21. Implementation of Enterprise Resource Planning (ERP) system to gain a competitive advantage is an example of

Ø Vision

Ø Mission

Ø **Strategies**

Ø Action plans

www.ranapk.com

22. Balance score card is a quality planning tool which is implemented to the companies intending to reach at

Ø Level 1

Ø Level 2

Ø Level 4

Ø **Level 7**

23. You are working in an organization which is manufacturing leather bags. The purchase of leather from supplier will be the

www.ranapk.com

Ø Key performance indicator

Ø Critical success factor

Ø Core process

Ø **None**

24. How can the quality be computed?

Ø Quality = Expectation/Performance

Ø **Quality = Performance/ Expectation**

Ø Quality = Performance + Expectation

Ø Quality = Performance-Expectation

www.ranapk.com

25. What is the traditional view of quality?

- Ø Quality is measured by establishing an acceptable level of conformance
- Ø Quality is measured by establishing an acceptable level of employee satisfaction
- Ø **Quality is measured by establishing an acceptable level of nonconformance**
- Ø Quality is measured by establishing an acceptable level of both conformance and nonconformance

26. Soft system thinking is used in which of the following situations?

- Ø **Friendly, certainty or ease in relationships**

www.ranapk.com

- Ø Certain and distinct relationships
- Ø Disciplined, organized and lively culture
- Ø Conflict, uncertainty or unease in relationships

27. Total quality organizations expect to make at least improvements

- Ø **10 or more improvements per employee per year**
- Ø 40 or more improvements per employee per year
- Ø 60 or more improvements per employee per year
- Ø 80 or more improvements per employee per year

www.ranapk.com

28. Which of the following is not a tenet of Crosby?

☐ Conformance to requirements.

☐ Zero defects

☐ **Fitness for use**

☐ Quality is free

29. The quality dimension that relates to the expected operational life of a product is:

☐ **Durability.**

☐ Serviceability.

∅ Perceived Quality.

∅ Reliability.

Short Questions

1. How can we differentiate b/w leadership and management in an organization? 3

Ans:

The manager administers; the leader innovates.

www.ranapk.com

- The manager is a copy; the leader is an original.
- The manager maintains; the leader develops.
- The manager focuses on systems and structure; the leader focuses on people.
- The manager relies on control; the leader inspires trust.
- The manager has a short-range view; the leader has a long-range perspective.
- The manager asks how and when; the leader asks what and why.
- The manager has his or her eye always on the bottom line; the leader's eye is on the horizon.
- The manager imitates; the leader originates.
- The manager accepts the status quo; the leader challenges it.
- The manager is the classic good soldier; the leader is his or her own person.
- The manager does things right; the leader does the right thing.

2. What are the various responsibilities of a steering committee and how can the leader of a team make the team members aware of the group process?

Ans: Steering committees are responsible for establishing policy

for TQ and for guiding the implementation and evolution of TQ throughout the organization. The top manager of the organization is usually on the steering committee, as is the manager with overall responsibility for quality- for example, the Vice President /Director of Total quality.

3. What are the basic types of statistical process control charts and how can you compute the upper control limit and the lower control limit? 3

Ans:

WWW.RANAPK.COM

www.ranapk.com

Two other horizontal lines represent the upper and lower control limits, chosen so that there is a high probability that sample values will fall within these limits if the process is under control – that is, affected only by common causes of variation. If points fall outside of the control limits or if unusual patterns such as shifts up or down, trends up or down, cycles, and so forth exist, special causes may be present.

4. Explain appraisal costs with the help of examples. 3

Ans:

The costs associated with measuring, evaluating or auditing products or services to assure conformance to quality standards and performance requirements.

These include the costs of:

- Incoming and source inspection/test of purchased material
- In-process and final inspection/test
- Product, process or service audits
- Calibration of measuring and test equipment
- Associated supplies and materials

5. using the quality control tool of run chart, discuss that how it can help in managing absenteeism in a production based organization. 5

6. What are the requirements of total quality for human resources and how can the managers ensure empowerment in the organization? 5

www.ranapk.com

7. Discuss the motivational factors that stimulate companies to obtain ISO certification. 5

Ans:

The organization shall establish, document, implement, maintain a quality management and continually improve its effectiveness in accordance with the requirement of this International Standard.

The organization shall:

- a) Identify the processes needed for the quality management system and their application throughout the organization;
- b) Determine the sequence and interaction of these processes;
- c) Determine criteria and methods needed to ensure that both the operation and control of the processes are effective;
- d) Ensure the availability of resources and information necessary to support the operation and monitoring of these processes;
- e) Measure, monitor and analyze these processes, and
- f) Implement action necessary to achieve planned results and continual improvement these processes.

8. What are the various approaches that the organizations use to achieve cost leadership for high volume products? How can the benefits resulting from cost leadership be cancelled out? 5

Ans:

To achieve cost leadership for high volume products, companies use a variety of approaches:

www.ranapk.com

- Early manufacturing involvement in the design of the product both for make-versus-buy decisions and for assurance that the production processes can achieve required tolerances.
- Product design to take advantage of automated equipment by minimizing the number of parts, eliminating fasteners, making parts symmetric whenever possible, avoiding rigid and stiff parts and using one-sided assembly designs.
- Limited product models and customization in distribution centers rather than in the factory.
- A manufacturing system designed for a fixed sequence of operations. Every effort is made to ensure zero defects at the time of shipment. Work-in-process inventory is reduced as much as possible, and multi skilled, focused teams of employees are used.

1-What are the advantages and uses of a fishbone diagram? (3mark)

Ans: This method requires significant interaction among group members. The facilitator must listen carefully to the participants and capture the important ideas.

2-For small and medium scale companies which usually do not enjoy a brand image, what benefits do they enjoy from the implementation of an ISO system? (3mark)

Ans: For Small and Medium Scale companies, which normally do not enjoy much of brand image, ISO certification helps to build confidence in the minds of customer organizations. This is particularly true in case of tenders and other contractual situations involving institutional buyers.

3-Define a 'team'. Enlist some of the qualities as individuals must possess as a team member?(3mark)

Ans:

A group of people with a full set of complementary skills required to complete a task, job, or project. Team members (1) operate with a high degree of interdependence, (2) share authority and responsibility for self-management, (3) are accountable for the collective performance, and (4) work toward a common goal and shared rewards(s).

4- There are various stages of team growth, what can be the feelings of a leader during 'Formation' stage? Also discuss the role of leadership in 'Forming'. (5 mark)

Ans:

Teams initially go through a "**forming**" stage in which members are positive and polite. Some members are anxious, as they haven't yet worked out exactly what work the team will involve. Others are simply excited about the task ahead. As leader, you play a dominant role at this stage: other members' roles and responsibilities are less clear.

This stage is usually fairly short, and may only last for the single meeting at which people are introduced to one-another. At this stage there may be discussions about how the team will work, which can be frustrating for some members who simply want to get on with the team task.

5-Explain briefly the following perspective in balance scorecard. (5 Marks)

(a) The Learning & Growth perspective

(b) The Business Process perspective

Ans:

a) The Learning & Growth Perspective focuses on the intangible assets of an organization, mainly on the internal skills and capabilities of the employees that are required to support the value-creating internal processes. The Learning & Growth Perspective focuses on:

- Human Capital-Jobs and people issues
- Information Capital- Systems and technology issues
- Organization capital- Organizational climate and quality of work-life

The Learning and Growth objectives describe how the people, technology, and organizational climate combine to support strategy. Measures in this perspective are lead indicators for improvements in the internal processes, customer and financial perspectives.

b) A **business process** or **business method** is a collection of related , structured activities or tasks that produce a specific service or product (serve a particular goal) for a particular customer or customers. It often can be visualized with a flowchart as a sequence of activities with interleaving decision points or with a Process Matrix as a sequence of activities with relevance rules based on the data in the process.

6- Enlist and explain core leadership skills. (5 Marks)

Ans:

www.ranapk.com

1. **Vision** This is the ability to formulate ideas about the business or parts of the business; to understand opportunities or the need for change; to create a mental picture of what the business will be in the future; and to articulate all of that clearly in words and images. At the highest level, it's the creation of the entrepreneur's dream.
2. **Discrimination** being able to see what's important, to understand the available choices, and to make sound, practical decisions. Discrimination is free-form decision making rather than rule-based decision making. It's knowing what questions to ask, and being able to answer them in the absence of rules or previous experience.
3. **Strategic Thinking** The ability to see the big picture and devise an effective path — the right actions — that will lead to realizing the vision. Inventing "the rules of your game" (as Michael Gerber puts it) and creating your business philosophy and key policies.
4. **Commitment** This is the determination and energy to follow through and make the vision a reality even in the face of obstacles, opposition, uncertainty, and risk. Without an underlying passion for your vision, commitment is difficult to maintain.
5. **Inspirational Communication** This is the skill of communicating vision and strategy, and being able to infuse the organization with enthusiasm, dedication, and some of your own spirit and passion.

Describe the stage of replacement; what is the strategy adopted by the competitors of 20th century and why? 3 marks

Ans:

The stage of replacement means shifting to a new paradigm. Managers must shift to a new paradigm for managing organizations because of the anomalies that threaten their survival and prosperity.

What is the Juran trilogy? 3marks

Ans: The Juran's Trilogy summarizes the three primary managerial functions. Quality Planning, Quality Control, and Quality Improvement

what are the special and common causes of the variations explain with the example of any organization? 5 Marks

Do you think that empowerment has the degree of involvement of the employees explain? 5 marks

www.ranapk.com

1. People usually go through four stages when learning new concepts or skills. Suppose you are learning to play a video game for the first time, explain briefly any three stages of learning 3marks

How a company will specify that product requirements have been met?

You want yourself get admitted to ABC university. How would you judge quality of education of uni?

How would you rationalize functions of QFD as a tool to translate customer requirements into technical requirements?

Find mean 0,2,5,9,12

How solution is planned and implemented in seven step of problem solving?

Being CFO of ABC Company, what are pre-requisites you should ensure for successful empowerment in your company?

Briefly Define Matrix Diagram and Relations Diagram (3 Marks)

Ans: Matrix Diagram: These are spreadsheets that graphically display relationships between characteristics, functions, and tasks in such a way as to provide logical connecting points between each item. QFD is one of many matrix diagrams now used for planning and quality improvements.

Relations Diagram: Purpose of this tool is taken a central idea and map out logical or sequential links among related categories. Every idea can be logically linked with more than one idea at a time. It allows lateral rather than linear thinking.

Define Team and enlist qualities of a good team member (3 Marks)

Role of sponsor in core process of an organization (3 Marks)

Explain Deming's Chain Reaction (5 Marks)

Ans:

This theory states that improvements in quality lead to lower cost because of less

rework, fewer mistakes, fewer delays and snags, and better use of time and materials. Lower costs, in turn, lead to productivity improvements. With better quality and lower prices, the firm can achieve a higher

market share and thus stay in business, providing more and more jobs. Deming states emphatically that top management has the overriding responsibility for quality improvement. If you focus on quality and improve the quality, customer satisfaction goes up. That results in increased market share and companies can lower prices. This is what is External to organization and viewed by the world. Internally if Quality goes up , productivity increases. this is because REWORK is reduced. This point is what most could not visualize or accept easily. As productivity increases the costs goes down. With reduced costs and reduced prices the Profits go up. This principle was implemented successfully in much Japanese organization and later accepted by MNCs Globally.

Characteristics of developing process during Maturity levels (5 Marks)

Ans:

The Capability Maturity Model (CMM) is a way to develop and refine an organization's processes. The first CMM was for the purpose of developing and refining software development processes. A maturity model is a structured collection of elements that describe characteristics of effective processes.

A maturity model provides:

- a place to start
- the benefit of a community's prior experiences
- a common language and a shared vision
- a framework for prioritizing actions
- a way to define what improvement means for your organization

A maturity model can be used as a benchmark for assessing different organizations for equivalent comparison. It describes the maturity of the company based upon the project the company is dealing with and the clients.

Benefits of QFD? (5 Marks)

Ans:

There are many benefits to be realized by using Quality Function Deployment (QFD), including the following:

- Customer driven: The focus is on customer's wants, not what the company thinks the customer wants. The "Voice of the Customer" drives the development process.
- Competitive analysis: Other products in the marketplace are examined, and the company product is rated against the competition.

www.ranapk.com

- **Reduced development time:** The likelihood of design changes is reduced as the QFD process focuses on improvements to be made to satisfy key customer requirements. Careful attention to customer requirements reduces the risk that changes will be required late in the project life cycle. Time is not spent developing insignificant functions and features.
- **Reduced development costs:** The identification of required changes occurs early in the project life cycle. Minimizing changes following production reduces warranty costs and product support costs.
- **Documentation:** A knowledge base is built as the QFD process is implemented. A historical record of the decision-making process is developed.

Explain dysfunctional level of organization at maturity level?

Do you think that empowerment has the degree of involvement of the employees explain ?5 marks

Ans:

Empowerment is more than another term for involvement, however. It represents a high degree of involvement in which employees make decisions themselves and are responsible for their outcomes. This is a more radical change than having employees merely participate in managers' decisions, even when they are given some influence.

For empowerment to occur, managers must undertake two major initiatives:

- Identify and change organizational conditions that make people powerless, and
- Increase people's confidence that their efforts to accomplish something important will be successful.

The need to do both of these implies that organizational system often creates powerless employees and that these systems must be changed first. Examples of systems in need of change are those that specify who can.

www.ranapk.com

1. What should be the responsibility of managers regarding Identification and Traceability of product?

- To enforce federal, state laws along with city ordinances
- **To identify the product by suitable means throughout product realization**
- To implement the country's legal requirements for efficient transportation of people
- To apply new professional engineering approaches and techniques

2. Why is there a need for identification and traceability for control of products?

- Due to packaging materials
- Due to use of suitable equipment
- Due to requirements for records
- **Due to risk mitigation**

3. What is the traditional view of quality?

- Quality is measured by establishing an acceptable level of conformance
- Quality is measured by establishing an acceptable level of employee satisfaction
- **Quality is measured by establishing an acceptable level of nonconformance**
- Quality is measured by establishing an acceptable level of both conformance and employee satisfaction

4. Customer needs must be linked to which of the following?

- Organization's strategic planning, process improvement and finances
- **Product design, product development and process improvement and tax returns *not sure***
- Organization's strategic planning, product design and process improvement

www.ranapk.com

- Process improvement, managerial planning, accounting tactics, and finances

5. When was the definition of total quality endorsed?

- In 1950
- In 1970
- In 1985
- **In 1992**

6. When were the behavioral theories developed?

- 1930s
- 1940s
- 1950s
- **1960s**

7. Edward Deming is best known for which of the following?

- Acquisition Integration Approaches
- **Seven Deadly Diseases**
- Brand Personality
- ERG Theory

8. By whom was the Deming Application Prize instituted in 1951?

- **Union of Japanese Scientists and Engineers**
-

www.ranapk.com

9. Which of the following is NOT a requirement of ISO 9001:2000?

- Processes to describe and monitor, what each customer wants
- Processes to measure and analyze customer satisfaction
- **Demonstration of continual improvement of internal process and customer satisfaction**
- Environmental Policy to be in existence within the organization

10. All of the following are the responsibilities of top management EXCEPT:

- Setting policies and objectives and leading the organization
- Provision of organization structure and resources
- Maintenance of current performance
- **Implementation of short-term plans and dealing with the routine work of their team**

11. Which of the following is a follow up activity relating to internal audit?

- Collection of quality cost data
- Questionnaires and surveys
- **Verification of implementation**
- Utilization of technologies

12. All of the following are the consideration of the organizations when analyzing how all the processes interact to make sure that all processes operate as an efficient network EXCEPT:

www.ranapk.com

- Ensuring inputs, activities and outputs are clearly defined and controlled
- Managing risks and opportunities
- **Monitoring inputs and outputs to confirm that, group processes are unrelated**
- Establishing data analysis that facilitates continual improvement across all processes

13. What should be the responsibility of managers regarding Identification and Traceability of product?

- To enforce federal, state laws along with city ordinances
- **To identify the product by suitable means throughout product realization**
- To implement the country's legal requirements for efficient transportation of people
- To apply new professional engineering approaches and techniques

14. SPC focuses on the process to produce the output. The use of SPC results in the form of

- **Both the consistency in product and satisfied customer**
- Consistency in product only
- Satisfied customer only
- Fluctuation in customer's demands only

15. Attribute process control charts are used for:

- **Defect Prevention**
- Process improvement
- Defect Deductions
- None of the given options

16. Which of the following is used to detect changes in variation within sub-groups?

www.ranapk.com

- X-Bar Chart
- R- Chart
- P-Chart
- C-Chart

17. Which of the following will fall in the category of non conformity if the range for the length of a yard stick is +, - 1000 mm?

- Yard stick which is 999 mm long
- Yard stick which is 1001 mm long
- Yard stick which is 1000.99 mm long
- Yard stick which is 1001.01 mm long

18. An effective team has all the characteristics EXCEPT:

- Goal centered
- Supportive
- Openness
- Self centered

19. Which of the following teams should be formulated if marketing department of ABC Company reports some problem regarding product design?

- Steering committee
- Self managed team
- Cross functional team
- Project team

20. Which of the following skills is most important for Self Managed Teams?

- Conceptual skills
- Technical skills

www.ranapk.com

➤ **Social Networking skills**

➤ Writing skills

21. Implementation of Enterprise Resource Planning (ERP) system to gain a competitive advantage is an example of

➤ Vision

➤ Mission

➤ **Strategies**

➤ Action plans

22. Balance score card is a quality planning tool which is implemented to the companies intending to reach at

➤ Level 1

➤ Level 2

➤ **Level 4**

➤ Level 7

23. You are working in an organization which is manufacturing leather bags. The purchase of leather from supplier will be the

➤ Key performance indicator

➤ Critical success factor

➤ Core process

➤ **None**

24. How can the quality be computed?

➤ $\text{Quality} = \text{Expectation} / \text{Performance}$

www.ranapk.com

- **Quality = Performance/ Expectation**
- Quality = Performance+Expectation
- Quality = Performance-Expectation

25. What is the traditional view of quality?

- Quality is measured by establishing an acceptable level of conformance
- Quality is measured by establishing an acceptable level of employee satisfaction
- Quality is measured by establishing an acceptable level of nonconformance
- **Quality is measured by establishing an acceptable level of both conformance and nonconformance**

26. Soft system thinking is used in which of the following situations?

- Friendly, certainty or ease in relationships
- Certain and distinct relationships
- **Disciplined, organized and lively culture**
- Conflict, uncertainty or unease in relationships

27. Total quality organizations expect to make at least improvements

- **10 or more improvements per employee per year**
- 40 or more improvements per employee per year
- 60 or more improvements per employee per year
- 80 or more improvements per employee per year

28. Which of the following is not a tenet of Crosby?

- *CONFORMANCE TO REQUIREMENTS.*
- *ZERO DEFECTS*
- **FITNESS FOR USE**

www.ranapk.com

➤ QUALITY IS FREE

29. The quality dimension that relates to the expected operational life of a product is:

- Durability.
- Serviceability.
- Perceived Quality.
- Reliability.

Q.No.1: Why did Deming believe that managers should stop decision purely based on cost? **3marks**

Q.No.2: The European Quality Award is divided into two parts to whom these are awarded? **3marks**

Q.No.3: What were the structured rationality and philosophy towards change in the mechanistic model? **(2.5+2.5) 5marks**

Q.No.4: The (SPIOC) Supplier-Input-Process-Output-Customer diagram induced a high levelmap the process that “map out its basic steps” Explain the element of this process? **5marks**

Q.No.1: How does Juran's Philosophy fit well into existing management? **3Marks**

Q.No.2: How quantity is defined by the five leaders in quantity revolution? **3marks**

Q.No.3: Mutually beneficial supplier's relationship and process approach benefits?
5marks

Q.No.4: Briefly explain as to how a management can be improved? **5marks**

Q.No.5: Why did Deming believe the business should not exist simply for profit?
5marks

(1) A Project Manager is at the project kick-off meeting. He confidently states the vision and mission for the project. This PM is exhibiting the following leadership style:

1. Hierarchal
2. Authoritarian
- 3. Charismatic**
4. Associative

(2) You are in charge of developing a new product for an organization. Your quality metrics are based on the 80th percentile of each of the last three products developed. This is an example of:

1. Statistical sampling
2. Metrics
- 3. Benchmarking**
4. Operational definitions

(3) The two closing procedures are called:

1. Contract close out and scope verification
- 2. Contract close out and Close Project**
3. Project closure and product verification
4. Project closure and lessons learned

www.ranapk.com

(4) During the schedule development process the Project Manager may have to go through several iterations of the schedule before establishing the schedule baseline. All of the following are tools and techniques that may be used during this process:

1. Critical Path Method, GERT, Resource Requirements
2. Resource Leveling Heuristics, Mathematical Analysis, Calendars
3. **Duration compression, Resource Leveling Heuristics, PERT**
4. GERT, PERT, Leads and Lags

(5) Which of the following models of conflict resolution allows a cooling off period, but seldom resolves the issue in the long term?

1. Problem solving
2. **Withdrawal**
3. Forcing
4. Smoothing

(6) The receiver filters messages based on all but the following:

1. Culture
2. Semantics
3. Language
4. **Distance**
5. Knowledge

(7) How much time does the typical project manager spend communicating both formally and informally?

1. 40-60%
2. 50-70%
3. 60-80%
4. **75-90%**

(8) Group brainstorming encourages all of the following except:

1. Team building
2. Analysis of alternatives
3. **Convergent thinking**
4. Uninhibited verbalization

(9) The critical element in a project's communication system is the:

www.ranapk.com

1. Progress report
2. Project directive
- 3. Project manager**
4. Customer

(10) System integration consists of:

1. Assuring that the pieces of a project come together at the right time
2. Planning for contingencies that may occur throughout the life cycle of the project
3. The pieces of the project function as an integration unit
- 4. a and c**

(11) Performance reviews are held to:

1. Correct the project manager's mistakes.
2. Provide for answers for upper levels of management
- 3. To assess project status or progress**
4. To apprise the project costs and cost trends of the project

(12) A complex project will fit best in what type of organization?

1. Functional
2. Cross-functional
- 3. Matrix**
4. Balanced

(13) Which of the following could be an appropriate WBS code for a work package at the fourth level in a WBS where the top level code is 1.0?

1. 1.4
2. 1.1.1.1
3. 1.2.3.4
4. a and c
- 5. b and c**

(14) Which of the following Project Scope Management processes involves subdividing the major project deliverables into smaller, more manageable components?

1. Scope Planning
2. Initiation

www.ranapk.com

3. Scope Change Control
4. Scope Definition
- 5. Create WBS**

(15) The review of key deliverables and project performance at the conclusion of a project phase is called:

1. phase exit
2. kill point
3. stage gate
4. a and c
- 5. all of the above**

(16) Project scope is:

- 1. The work that must be done in order to deliver a product with the specified features and functions.**
2. The features and functions that are to be included in a product or service.
3. A narrative description of work to be performed under contract.
4. a and b
5. all of the above

(17) The unique identifiers assigned to each item of a WBS are often known collectively as:

1. The work package codes
2. The project identifiers
- 3. The code of accounts**
4. The element accounts

(18) The sender of a message is responsible for:

- 1. Confirming the message is understood**
2. Ensuring the receiver agrees with the message
3. Scheduling communication exchange
4. Presenting the message in the most agreeable manner

(19) What are the best uses of PERT:

1. Used in the planning phase to do " what if for the project.
2. Assist in the controlling of changes to the project.
3. Is used in the process of preparing a WBS for the project.
4. To measure future consequences of activities.

www.ranapk.com

5. a and d.

(20) Change requests can occur due to:

1. An external event such as a change in government regulation.
2. An error or omission in defining the scope of the product.
3. An error or omission in defining the scope of the project.
4. a and c

5. all of the above

(21) A project plan is:

- 1. A formal, approved document used to guide both project execution and project control.**
2. A document issued by senior management that provides the project manager with the authority to apply organizational resources to project activities.
3. A narrative description of products or services to be supplied.
4. A document describing the organizational breakdown structure of the company.

(22) Which of the following is NOT an example of a type of schedule report?

1. Gantt chart
2. Milestone chart
- 3. Fishbone diagram**
4. Network diagram

(23) The most important criteria in selecting project selection method is:

1. Ease of use
2. Cost of using it
3. Available expertise
4. Capability

5. Realism

(24) What is Team Development?

1. Setting up a team of people with the skills set that are required
2. Sending you project team to a PMI seminar
3. Motivating your project team members
- 4. Enhancing the ability of stakeholders to contribute as individuals**
- 5. Enhancing the ability of the team to function as a team**

www.ranapk.com

(25) 3 major processes in Project HRM:

1. Staff recruitment, project staff planning and team building
2. **HR planning, Acquire Project Team and Develop Project Team**
3. Rewarding, salary reviews and penalties
4. Staff acquisition, staff training, staff deployment

(26) A project is defined as:

1. A process of considerable scope that implements a plan.
2. An endeavor, which is planned, executed, and controlled; performed by people; and constrained by limited resources.
3. **A temporary endeavor undertaken to create a unique product or service.**
4. An objective based effort of temporary nature.

(27) General management encompasses:

1. **Planning, organizing, staffing, executing, and controlling the operations of an ongoing enterprise.**
2. Business policy, financial management, business economics, contract administration, and legal services necessary for operating an enterprise.
3. Business strategy, planning and controlling, organizational behavior, procurement, and personnel administration required for managing the ongoing aspect of a business venture.
4. Organizational development, staffing, marketing and sales, procurement, and contract administration as part of an ongoing organization.

(28) Project management processes can be organized into:

1. Initiating, planning, contracting, executing, and administration
2. Designing, developing, testing, and implementing
3. Initiating, designing, planning, executing, controlling, and implementation
4. **Initiating, planning, executing, controlling, and closing**

(29) _____ must be measured regularly to identify variance from the plan.

1. Stakeholder requirements
2. **Project performance**
3. Schedule progress
4. Cost and schedule

(30) A project kick off meeting is usually conducted to:

www.ranapk.com

1. Setup project team and announce the PM assignment

2. To draft project charter
3. Build up team spirit
4. Define project scope and develop WBS

(31) Which of the following is not an external-unpredictable risk?

1. Changes in government regulations
2. Natural hazards
3. Unexpected environmental side effects

4. Inflation

(32) Maslow ranked Human needs from the highest to lowest:

1. Self actualization; self promotion; social; security and physiological needs
2. Self esteem; self actualization; social; security and physiological
- 3. Self actualization; self esteem; social; security and physiological**
4. Self fulfillment; self esteem; social; security and physiological

(33) Which of the following statements concerning contract type is correct?

1. A fixed price contract contains the most risk for the buyer.
2. Cost reimbursable contracts offer sellers the highest profit potential.
- 3. Lump sum contracts offer sellers the greatest profit potential.**
4. Unit price contracts are illegal in many jurisdictions.

(34) Herzberg identified factors, which, if present, will lead to increased motivation. A typical factor would be:

1. Good supervision
2. Job security
- 3. Regular promotions**
4. Good salary
5. A dental plan

(35) Your customer ask for a small change in the project, which was not budgeted in the project. It is a small effort as compared to the total project and you need the goodwill for a multimillion dollar on the pipeline. You will

1. Refuse to do the work
2. Agree to do the work at no charge
3. Do the work and bill him later

www.ranapk.com

4. Assess the cost and schedule impact and tell them you will decide later

(36) You are responsible for ensuring that your seller's performance meets contractual requirements. For effective contract administration, you should:

1. Hold a bidders conference
2. Establish the appropriate contract type

3. Implement the contract change control system

4. Develop a statement of work

(37) The three major causes of change on a project are:

1. Replacement of the project manager or key project team members; changes in priorities by senior management; and contractual difficulties.
2. Changes in the relative importance of time, resources, or cost ; new knowledge about the deliverable; and technological uncertainty
- 3. Errors in the initial assessment of how to achieve the goal of the project; new information about the project deliverable; and a new mandate**
4. Unavailability of resources promised by the functional managers; cost overruns; and changes in customer requirements

(38) The purpose of the review of deliverables and project performance at the conclusion of a project phase is to:

1. Determine how many resources are required to complete the project according to the project baseline
2. Adjust the schedule and cost baselines based on past performance
3. Obtain customer acceptance of project deliverables
- 4. Determine whether the project should continue to the next phase**

(39) Your project is in the final test stage, the user acceptance test. It meets all the product specs and is under planned costs. In term of schedule, this project is ahead. Your customer meets you and requested that he will not accept the product unless you make several changes. What you should do is:

1. Get the list of the changes and estimate all of them. If the total cost is still within the baseline, you just do it
2. Estimate the costs and send this to your customer requesting contract modification
- 3. Ask the customer to file a Change request**
4. Sit with the customer to review the product specs and tell him/her that you have completed the project.

(40) The Delphi Method is best suited for:

www.ranapk.com

1. Decision-making

2. Cost Control
3. Overhead rate estimating
4. Team discussions

(41) Which of the following methods is least likely to be used for explaining project planning guidelines to the team?

1. Project Office Memo
2. Project office directive
3. Project team meeting

4. Formal project report

(42) Projects are initiated in response of:

1. Stakeholder's pressure
2. Business needs
3. Technological obsolescence

4. All of the above

(43) The party that needs the change resulting from the project, and who will be its custodian on completion is the:

1. Owner

2. Sponsor
3. Customer
4. Client

(44) A document or tool which describes when and how human resources will be brought onto and taken off the project team is called a:

1. Staffing Management Plan

2. Responsibility Assignment Matrix (RAM).
3. Organizational Breakdown Structure (OBS).
4. Resource Assignment Chart

(45) In which type of organization is team building likely to be most difficult?

1. Functional
2. Projectized

3. Matrix

www.ranapk.com

4. Project expediter
5. Project coordinator

(46) A tool which links the project roles and responsibilities to the project scope definition is called:

1. Scope Definition Matrix
2. **Responsibility Assignment Matrix**
3. Roles Assignment Matrix
4. Project Scope and Roles Matrix

(47) Which of the following are outputs from the Communications Planning process?

1. Project records
2. **Communications management plan**
3. Performance reports
4. Formal acceptance
5. b and c

(48) The receiver filters messages based on all but the following:

1. Culture
2. Semantics
3. Language
4. **Distance**
5. Knowledge

(49) The sending or conveying of information from one place to another is the process of:

1. Networking
2. **Transmitting**
3. Encrypting
4. Promoting

(50) The three major types of communication are:

1. **Written, verbal, and non-verbal.**
2. Verbal, formal documentation, informal documentation.
3. Verbal, written, and graphic.
4. Verbal, written, and electronic.

www.ranapk.com

1 Which of the following is an advantage of centralized contracting?

1. Gives easier access to contracting expertise
2. **Increases company expertise in contracting**
3. Gives more loyalty to the project
4. Allows a contracts person to work on a single project

2 Risks will be identified during which risk management process (es)?

1. Quantitative risk analysis and risk identification
2. **Risk identification and risk monitoring and control**
3. Qualitative risk analysis and risk monitoring and control
4. Risk identification

3 The highest point of Maslow's hierarchy of needs is:

1. Physiological satisfaction.
2. Attainment of survival.
3. Need for association.
4. **Esteem.**

4 Who is ultimately responsible for quality management on the project?

1. Project engineer
2. **Project manager**
3. Quality manager
4. Team member

5 A heuristic is best described as a:

1. Control tool.
2. Scheduling method.
3. Planning tool.
4. **rule of thumb.**

6 If earned value (EV) = 350, actual cost (AC) = 400, planned value (PV) = 325, what is cost variance (CV)?

1. 350
2. -75
3. 400

www.ranapk.com

4. -50

7 A project manager has just been assigned to a new project and has been given the preliminary project scope statement and the project charter. The first thing the project manager must do is:

1. create a project scope statement.
2. **confirm that all the stakeholders have had input into the scope.**
3. analyze project risk.
4. begin work on a project management plan.

8 You are taking over a project during the planning process group and discover that six individuals have signed the project charter. Which of the following should most concern you?

1. Who will be a member of the change control board
2. Spending more time on configuration management
3. Getting a single project sponsor
4. **Determining the reporting structure**

9 The project manager is making sure that the product of the project has been completed according to the project management plan. What part of the project management process is he in?

1. Planning
2. Executing
3. Monitoring and controlling
4. **Closing**

10 The WBS and WBS dictionary are completed. The project team has begun working on identifying risks. The sponsor contacts the project manager, requesting that the responsibility assignment matrix be issued. The project has a budget of U.S. \$100,000 and is taking place in three countries using 14 human resources. There is little risk expected for the project and the project manager has managed many projects similar to this one. What is the next thing to do?

1. Understand the experience of the sponsor on similar projects.
2. **Create an activity list.**
3. Make sure the project scope is defined.
4. Complete risk management and issue the responsibility assignment matrix.

11 Risk tolerances are determined in order to help:

1. **the team rank the project risks.**
2. the project manager estimate the project.

www.ranapk.com

3. the team schedule the project.
4. management know how other managers will act on the project.

12 A project manager is employed by a construction company and is responsible for the furnishing of the completed building. One of the first things that the project manager for this project should do is to write a:

1. Work breakdown structure.
2. Budget baseline.
- 3. Project charter.**
4. Project plan.

13 Your company has an emergency and needs contracted work done as soon as possible. Under these circumstances, which of the following would be the helpful to add to the contract?

1. A clear contract statement of work
2. Requirements as to which subcontractors can be used
- 3. Incentives**
4. A force majeure clause

14 The "halo effect" refers to the tendency to:

1. promote from within.
2. hire the best.
- 3. move people into project management because they are good in their technical fields.**
4. move people into project management because they have had project management training.

15 A project manager is trying to complete a software development project, but cannot get enough attention for the project. Resources are focused on completing process-related work and the project manager has little authority to properly assign resources. What form of organization must the project manager be working in?

- 1. Functional**
2. Matrix
3. Expediter
4. Coordinator

16 All of the following are characteristics of a project EXCEPT:

1. Temporary
2. Definite beginning and end
3. Interrelated activities
- 4. Repeats itself every month**

www.ranapk.com

17 A team is using a fishbone diagram to help determine what quality standards will be used on the project. What part of the quality management process are they in?

1. Perform quality control
2. Perform quality assurance
3. **Quality planning**
4. Variable analysis

18 The equivalent of cost reimbursable contracts is frequently termed:

1. Back charge contracts.
2. Fixed price contracts.
3. Progress payment contracts.
4. **Cost plus contracts.**

19 A buyer extends a formal invitation that contains a scope of work that seeks a response that will describe the methodology and results that will be provided to the buyer. This is called:

1. Invitation to bid.
2. Request for information.
3. **Request for proposal.**
4. Request for bid.

20 A project manager must have some work done by an outside contractor. This work has a great deal of risk associated with it, and it has become very difficult to find a contractor willing to take on the job. Which of the following types of contract would offer the greatest incentive to the contractor?

1. **Cost plus percentage of cost as an award fee**
2. Cost plus fixed fee
3. Cost plus incentive fee
4. Firm fixed price

21 Purchasing insurance is considered an example of risk:

1. mitigation.
2. **transfer.**
3. acceptance.
4. avoidance.

22 A cost performance index (CPI) of 0.89 means:

www.ranapk.com

1. at this time, we expect the total project to cost 89 percent more than planned.
2. when the project is completed we will have spent 89 percent more than planned.
3. the project is only progressing at 89 percent of that planned.
4. **the project is only getting 89 cents out of every dollar invested.**

23 In the matrix management organization, which of the following is true?

1. The project manager is responsible for employee skills improvement.
2. **The functional manager is responsible for employee skills improvement.**
3. The project manager is responsible for the employee's annual appraisal.
4. The employee is responsible for his or her own skills improvement.

24 Your program manager has come to you, the project manager, for help with a bid for her newest project. You want to protect your company from financial risk. You have limited scope definition. What is the BEST type of contract to choose?

1. Fixed price (FP)
2. Cost plus percent of cost (CPPC)
3. Time and material (T&M)
4. **Cost plus fixed fee (CPFF)**

25 The project management process groups are:

1. Initiating, planning, expediting, and control.
2. Plan, organize, develop, and control.
3. Plan, do, observe, commit.
4. **Initiating, planning, executing, controlling, and closeout.**

26 In which project management process group is the detailed project budget created?

1. Initiating
2. Before the project management process
3. **Planning**
4. Executing

27 Which of the following conflict resolution techniques will generate the MOST lasting solution?

1. Forcing
2. Smoothing
3. Compromise

www.ranapk.com

4. Problem solving

28 Decomposing the major deliverables into smaller, more manageable components to provide better control is called:

1. Scope planning.
2. **Scope definition.**
3. Scope base lining.
4. Scope verification.

28 Any numbering system that is used to monitor project costs by category such as labor, supplies, or materials, for example, is called:

1. **Chart of accounts.**
2. Work breakdown structure.
3. Universal accounting standard.
4. Standard accounting practices.

29 Which of the following is NOT an input to the initiating process group?

Company processes

The company culture

Historical WBSs

Project scope statement

30 Workarounds are determined during which risk management process?

1. Risk identification
2. Quantitative risk analysis
3. Risk response planning
4. **Risk monitoring and control**

31 A person who is involved in or may be affected by the activities or anyone who has something to gain or lose by the activity of the project is called a:

1. Team member.
2. Customer.
3. Stakeholder.

www.ranapk.com

4. Supporter.

32 Quality is:

1. meeting and exceeding the customer's expectations.
2. adding extras to make the customer happy.
- 3. the degree to which the project meets requirements.**
4. conformance to management's objectives.

33 A schedule performance index (SPI) of 0.76 means:

1. you are over budget.
2. you are ahead of schedule.
- 3. you are only progressing at 76 percent of the rate originally planned.**
4. you are only progressing at 24 percent of the rate originally planned.

34 Contract closure is different from administrative closure in that contract closure:

- 1. occurs before administrative closure.**
2. is the only one to involve the customer.
3. Includes the return on property.
4. may be done more than once for each contract.

35 During the full life cycle of the project, a plot of the project's expected expenditures will usually follow a characteristic ..S.. shape. This indicates that:

1. There is a cyclic nature to all projects.
2. Problems will always occur in the execution phase.
3. There are high expenditures during closeout.
- 4. The bulk of the project budget will be spent in the execution phase.**

36 An output of administrative closure is the creation of:

- 1. project archives.**
2. a project charter.
3. a project management plan.
4. a risk analysis plan.

37 A temporary endeavor undertaken to create a new product or service is called a:

www.ranapk.com

1. New product development.
2. **Project.**
3. Program.
4. Enterprise.

38 An example of scope verification is:

1. **Reviewing the performance of an installed software module.**
2. Managing changes to the project schedule.
3. Decomposing the WBS to a work package level.
4. Performing a benefit-cost analysis to determine if we should proceed.

39 What conflict resolution technique is a project manager using when he says, "I cannot deal with this issue now!"

1. Problem solving
2. Forcing
3. **Withdrawal**
4. Compromising

40 Approved corrective action is an input to:

1. scope control and scope verification.
2. **direct and manage project execution and integrated change control.**
3. develop project management plan and develop project charter.
4. develop project management plan and schedule development.

41 A group of related projects that are managed in a coordinated way that usually include an element of ongoing activity is called a:

1. Major project.
2. Project office.
3. **Program.**
4. Group of projects.

42 To control the schedule, a project manager is reanalyzing the project to predict project duration. She does this by analyzing the sequence of activities with the least amount of scheduling flexibility. What technique is she using?

1. **Critical path method**
2. Flowchart
3. Precedence diagramming

www.ranapk.com

4. Work breakdown structure

43 A project manager has assembled the project team, identified 56 risks on the project, determined what would trigger the risks, rated them on a risk rating matrix, tested their assumptions and assessed the quality of the data used. The team is continuing to move through the risk management process. What has the project manager forgotten to do?

1. Simulation
2. Risk mitigation
3. Overall risk ranking for the project
- 4. Involvement of other stakeholders**

44 Configuration management is:

1. Used to ensure that the description of the project product is correct and complete.
2. The creation of the work breakdown structure.
- 3. The set of procedures developed to ensure that project design criteria are met.**
4. A mechanism to track budget and schedule variances.

45 A rough order of magnitude estimate is made during which project management process group?

1. Project planning
2. Project closing
3. Project executing
- 4. Project initiating**

46 The breakdown structure the lowest level of the breakdown for the project manager is called the:

1. Activity.
2. Task.
- 3. Work package.**
4. Cost account.

47 All of the following are examples of the cost of nonconformance EXCEPT?

1. Rework
- 2. Quality training**
3. Scrap

www.ranapk.com

4. Warranty costs

48 What type of contract do you not want to use if you do not have enough labor to audit invoices?

1. Cost plus fixed fee (CPFF)
2. Time & material (T&M)
- 3. Fixed price (FP)**
4. Fixed price incentive fee (FPIF)

49 A project manager has just been assigned to a project. The document that recognizes the existence of the project is called:

1. The statement of work.
2. The project assignment.
- 3. The project charter.**
4. The product description.

50 The WBS for the project represents:

1. All the tangible items that must be delivered to the client.
- 2. All the work that must be completed for the project.**
3. The work that must be performed by the project team.
4. All the activities of the project.

USMAN ATTARI'S FINAL TERMS SUB. File

1. Describe the stage of replacement; what is the strategy adopted by the competitors of 20th century and why? 3 marks

The Stage of Replacement: A New Paradigm

The stage of replacement means shifting to a new paradigm. Managers must shift to a new paradigm for managing organizations because of the differences that threaten their survival and prosperity. To make this shift, however, they must understand the new paradigm and how it differs from the old paradigm. To initiate this understanding, we will contrast the new (but still emerging) paradigm with the old paradigm.

Themes of the New Paradigm

The differences between the new and the old paradigm are organized around three themes: customer value strategy, cross-functional systems, and continuous improvement.

- Theme 1: Customer Value Strategy

Customer value is defined as the combination of benefits derived from using a product (or service) and the sacrifices required of the customer. The customer value strategy is the business plan for offering value to customers, including product characteristics, attributes, mode of delivery, support services, and so on. The theme of customer value strategy may be addressed in many topics, including quality, measurement, positioning, key stakeholder, and product design.

- Theme 2: Cross-Functional Approach

The old paradigm does not acknowledge systems that cut across functional or unit boundaries. Managers simply negotiate across functional interfaces to obtain minimal cooperation. In the new paradigm, managers define, own, and optimize cross-functional systems for customer value.

Theme 3: Continuous Improvement

To keep pace with the changes in the external environment, managers have to change the organization. Managers have always made improvements. However, with rates of change increasing in the external environment, managers must improve differently and more frequently than in the past. They must pursue continuous improvement, which is a constant striving to change and make things better.

www.ranapk.com

2. Advantages and the use of the fish bone diagram? 3marks

The most useful tool for identifying the causes of problems is a **cause-and-effect diagram**, also known as a **fishbone or Ishikawa diagram**, named after the Japanese quality expert who popularized the concept. A cause-and-effect diagram is simply a graphical representation of an outline that presents a chain of causes and effects.

1. A team typically uses a cause-and-effect diagram to identify and isolate causes of a problem.
2. Making diagram is educational in itself.
3. Diagram demonstrates knowledge of problem solving team.
4. Focuses team on cause not on symptoms.
5. Shows the relationship between a problem and its possible causes.
6. Diagram results in active searches for causes.
7. Diagram is a guide for Data Collection.

3. What is the Juran's trilogy? 3marks

The Juran's Trilogy is a registered trademark of Juran Institute, Inc. summarizes the three primary managerial functions.

- Quality Planning
- Quality Control
- Quality Improvement

4. What are the motivation factors which influence to register ISO 9000? 5marks

Management Motivation for Registration to ISO 9000

Management motivation for adopting either ISO 9000 or TQM can vary widely. There are both appropriate and inappropriate motives. For example, if a company seeks ISO 9000 registration to obtain a marketing advantage, its motive is inappropriate. As a result, the organization will likely give mere lip service to adopting the standard. Appropriate motives for adopting ISO 9000 include the following:

www.ranapk.com

- To improve operations by implementing a quality management system that satisfies the ISO 9000 requirements for management responsibility; resource management; product realization; and measurement, analysis, and improvement.
- To create or improve a quality management system that will be recognized by customers worldwide.
- To improve product or service quality or the consistency of quality.
- To improve customer satisfaction.
- To improve competitive posture.
- To conform to the requirements of one or more major customers (although adoption would be better motivated by internal consideration, such as the preceding five).

5. What are the special and common causes of the variations explain with the example of any organization? 5 Marks

- **Common-cause variation** natural variation that are always part of the process.
- **Special-cause variation** not part of the process and that occur only in special circumstances, such as a shipment of faulty raw material or the involvement of a new, untrained operator.

Here are some examples of common and special causes of variation.

Common Causes

- Inappropriate procedures.
- Poor design.
- Poor maintenance of machines.
- Lack of clearly defined standard operating procedures.
- Poor working conditions, e.g. lighting, noise, dirt, temperature, ventilation.
- Machines not suited to the job.
- Substandard raw materials.
- Measurement error.
- Vibration in industrial processes.
- Ambient temperature and humidity.
- Insufficient training.
- Normal wear and tear.
- Variability in settings.
- Computer response time.

Special Causes

www.ranapk.com

- Operator absent.
- Poor adjustment of equipment.
- Operator falls asleep.
- Faulty controllers.
- Machine malfunction.
- Computer crashes.
- Poor batch of raw material.
- Power surges.(flow)

6. Do you think that empowerment has the degree of involvement of the employees explain?5 marks

Empowerment means **giving someone power-granting the authority** to do whatever is necessary to satisfy customers, and trusting employees to make the right choices without waiting for management approval. By empowering employees, organizations drive decision making down to its lowest possible level. Empowerment allows organizations to flatten their organizational structure because fewer managers are needed to “direct and control” employees. Many companies have found that giving people throughout the organization the power to make a difference contributes greatly to providing quality products and services to their customers. The need to empower the entire workforce in order for quality to succeed has long been recognized, even if it is only recently coming into practice.

7. People usually go through four stages when learning new concepts or skills. Suppose you are learning to play a video game for the first time, explain briefly any three stages of learning 3marks

As individuals must continue to learn, so must organizations. Prof. Peter Senge of MIT portrays organizational learning as going beyond the mere capture of knowledge to include gaining a deeper and complete understanding of how things work, and involve five learning disciplines:

1. Personal Mastery---a continual drive for personal and organizational development.
2. Mental Models---understanding how our cognitive schema affects our view of the world, and continually improving the accuracy of the model.
3. Shared Vision---working jointly toward a common view to which all aspire.
4. Team Learning---the use of dialogue to move beyond mere conversation to true joint understanding.
5. Systems Thinking---understanding the multiple cause-and-effect relationships and how they are interconnected in organizations, society and other systems.

www.ranapk.com

8. Difference between control chart and Flow chart?

A **flowchart** is a picture of a process that shows the sequence of steps performed. Flowcharts are best developed by the people involved in the process—employees, supervisors, managers, and customers. A facilitator often is used to provide objectivity, to ask the right questions, and to resolve conflicts. The facilitator can guide the discussion through questions such as “What happens next?” “Who makes the decision at this point?” and “what operation is performed here?”

A **control chart** displays the state of control of a process. Time is measured on the horizontal axis, and the value of a variable on the vertical axis. A central horizontal line usually corresponds to the average value of the quality characteristic being measured. Two other horizontal lines represent the upper and lower control limits, chosen so that there is a high probability that sample values will fall within these limits if the process is under control – that is, affected only by common causes of variation. If points fall outside of the control limits or if unusual patterns such as shifts up or down, trends up or down, cycles, and so forth exist, special causes may be present.

9. Two fundamental mistakes that can be made concerning variation are:

1. Treating special causes as common causes, and
2. Treating common causes as special causes.

10. Importance of empowerment

1. Giving employees' responsibility for their own work has led to improvements in quality, productivity, motivation, customer service, speed of decision making, and confidence.
2. Empowerment leads to greater levels of satisfaction among the workforce.
3. Empowered employees give faster and friendlier service to their customers.
4. Employee satisfaction strongly related to customer satisfaction.

11. How a company will specify that product requirements have been met?

Monitoring and Measurement of Product

The company must **monitor and measure the characteristics of the product** to verify that product requirements have been met. This must be conducted at appropriate stages of the product realization process in accordance with the planned arrangements.

www.ranapk.com

The company must ensure that the planned arrangements have been satisfactorily completed prior to product release and service delivery, unless otherwise approved by a relevant authority and, where applicable, by the customer.

The company must maintain records to verify evidence of conformity with product requirements. Records must indicate the person(s) authorizing release of product.

12. You want yourself get admitted to ABC university. How would you judge quality of education of university?

The following criteria should be taken into account when assessing possible universities; only you know how much weight to give each one. Thinking about each factor carefully helps you shorten your list of potential colleges where you feel the most comfortable.

- Size
- Location
- Public versus Private
- Academic Programs
- Student Diversity
- Male/Female Ratio
- Campus Life
- Athletics
- Cost
- Admissions Standards/Selectivity
- Facilities/Technology
- Family Issues
- Disability Services
- Study Abroad Programs/Co-ops/Internships

13. How would you rationalize functions of QFD as a tool to translate customer requirements into technical requirements?

Customer's needs and expectations drive the planning process for products and the systems by which they are produced. Marketing plays a key role in identifying customer expectations. That is what is known Voice of Customer in QFD or WHAT in a simple Matrix Diagram. Once these are identifies, managers must translate them into specific products and service specifications that manufacturing and service delivery processes of the organizations (Voice of Process in QFD or HOW in Matrix Diagram) must meet. In some cases the product or service that customers receive is quite different from what they expect. It is management's responsibility to minimize such gaps.

www.ranapk.com

Firms use several tools and approaches to help them focus on their external and internal customers.

- Matrix Diagram
- Relations Diagram
- Affinity Diagram
- Tree Diagram
- Arrows Diagram

Find mean 0, 2, 5, 9, and 12

$$= 28/5 = 5.6$$

Differentiate between leadership and management?

Leadership and management must go hand in hand. They are not the same thing. But they are necessarily linked, and complementary. Any effort to separate the two is likely to cause more problems than it solves. Still, much ink has been spent delineating the differences.

MANAGER	LEADER
Plan	Inspire and motivate
Administers	Innovates
Maintains	Develops
Creates order, planning, budgeting and problem solving	Creates a vision, motivates and inspires
Direction	Empowers people
Focuses on systems and structure	Focuses on people
Control	Inspires trust
Short-range view	Long-range perspective
Asks how and when	Asks what and why
Eye always on the bottom line	Eye is on the horizon
Imitates	Originates
Accepts the status quo	Challenges it
Classic good soldier	Own person
Does things right	Does the right thing

How solution is planned and implemented in seven step of problem solving?

www.ranapk.com

Seven simple statistically based tools are used extensively to gather and analyze data. Unlike the seven advanced management and planning tools, these tools are visual in nature and simple enough for anyone to understand.

These seven basic tools of quality are:

1. Flow-charts,
2. Check sheets,
3. Histograms: it's a graphical representation of variation in a set of data.
 1. It represents frequency or no. of observations of a particular value.
 2. It provides info. For predicting the future performance.
 3. It helps to display a large amount of data which is difficult interpreting in tabular form.
 4. Shows variation, centering & shape.
 5. Illustrate the underlying distribution of data.
 6. Helps to answer the question ,” Is process capable to meet the requirements?”.
4. Pareto diagrams: helps to prevent” shifting the problem”. Helps the team to focus on causes that have greatest impact.
5. Cause-and-Effect diagrams,
6. Scatter diagrams:
 - Provides both a visual and statistical means to test the strength of a relationship
 - Provides a good follow-up to cause and effect diagrams
 - Describes the relationship b/w two variables.
7. Control charts

Project: identify customers needs & collect meaningful data.

Current situation: collect meaningful data.

Cause analysis: identify root cause & collect meaningful data.

Solution: develop appropriate solutions & plan & make changes.

Result: collect meaningful data.

Standardization: develop standardization

Follow up or future plan: collect meaningful data, : develop appropriate solutions & plan & make changes.

Being CFO of ABC Company, what are pre-requisites you should ensure for successful empowerment in your company?

- Provide education and resources
- Remove restrictive policies/procedures
- Create an atmosphere of trust
- Share information freely
- Make work valuable
- Train managers in leadership
- Train employees

Briefly Define Matrix Diagram and Relations Diagram (3 Marks)

Matrix Diagram: These are spreadsheets that graphically display relationships between characteristics, functions, and tasks in such a way as **to provide logical connecting points between each item.** QFD is one of many matrix diagrams now used for planning and quality improvements.

Relations Diagram: Purpose of this tool is taken a central idea and map out logical or sequential links among related categories. Every idea can be logically **linked with more than one idea at a time.** **It allows lateral rather than linear thinking.**

Define Team and enlist qualities of a good team member (3 Marks)

A small number of people with complementary skills who are committed to a common purpose, set of performance goals, and approach for which they hold themselves mutually accountable, Effective teams are goal-centered, independent, open, supportive, and empowered.

Peter Scholtes, a leading authority on teams for quality improvements, has suggested for a successful team:

10 ingredients

www.ranapk.com

- Clarity in team goals
- An improvement plan
- Clearly defined roles
- Clear communication
- Beneficial team behaviors
- Well-defined decision procedures
- Balanced participation
- Established ground rules
- Awareness of group process
- Use of the scientific approach

Explain Deming's Chain Reaction (5 Marks)

Deming stresses that higher quality and improvement in quality leads to higher productivity, which in turn leads to long-term competitive strength. This theory states that improvements in quality lead to lower cost because of less rework, fewer mistakes, fewer delays and hurdle, and better use of time and materials. Lower costs, in turn, lead to productivity improvements. With better quality and lower prices, the firm can achieve a higher market share and thus stay in business, providing more and more jobs. Deming states emphatically that top management has the overriding responsibility for quality improvement.

Characteristics of developing process during Maturity levels (5 Marks)

A maturity model is a structured collection of elements that describe characteristics of effective processes. A maturity model provides:

- A place to start
- The benefit of a community's prior experiences
- A common language and a shared vision
- A framework for prioritizing actions
- A way to define what improvement means for your organization

A maturity model can be used as a benchmark for assessing different organizations for equivalent comparison. It describes the maturity of the company based upon the project the company is dealing with and the clients.

Benefits of Quality Function Deployment (QFD)? (5 Marks)

QFD is an overall concept that provides a **mean of translating customer requirements into appropriate technical requirements** for each stage of product development and production. Voice of Customer is collection of all satisfiers, delighters/exciters and dissatisfiers i.e. WHAT part of a matrix that customers want from a product.

Variable Statistical control and Attribute Statistical control 5 marks

Check sheets are **data collection forms** that facilitate the interpretation of data. Quality-related data are of two general types—**attribute and variable**. Attribute data are **obtained by counting or from some type of visual inspection**: the number of invoices that contain errors, the number of parts that conform to specifications, and the number of surface defects on an automobile panel, for example. **Variable** data are collected by **numerical measurement on a continuous scale**. Dimensional characteristics such as distance, weight, volume, and time are common examples.

OR

Variables Data - quality characteristics that are measurable values. Measurable and normally continuous; may take on any value.

Attribute Data - quality characteristics that are observed to be either present or absent, conforming or nonconforming.

- Countable and normally discrete

Implementing a Quality Management System 5 marks

There are key steps that every company implementing a QMS will need to consider:

- [Purchase the Standard](#)
- Review support literature and software
- Assemble a team and agree your strategy
- [Consider Training](#)
- Review Consultancy Options
- [Choose a registrar](#)
- Develop a Quality manual
- Develop support documentation
- Implement your Quality Management System
- Consider a pre-assessment

www.ranapk.com

- Gain registration
- Continual assessment

How to create organizational excellence? 5 marks

- Identifying Needs which companies and organizations commit themselves to satisfy. This was done largely through Information Network and Analysis activities.
- Establishing shared Objectives and desired Results linked to measures of Quality
- Defining the Work that has to be done together with the Policies and Procedures to establish a supportive work climate.
- Determining the core Competences needed and empowering people with skills and teambuilding needed to achieve results.

Because the research focused on management work, other tasks of organizational life contributing to organizational excellence were not covered. A review of published studies on management work suggested that these should include those focusing on aspects of organizational life and tasks, related to the critical role of the top leadership in mission and vision creation and the transformational impact of such behaviors. Integrating these different strands will lead to a more complete understanding of the components that define organizational excellence

Question No: 34 (Marks: 3)

The President of Samsung Electronics has appointed the Manager Quality as 'Management Representative'. Discuss the authority and responsibility of the Management Representative.

Authority and Responsibility: To ensure

1. that needed process for the quality management system are established, maintained and implemented.
2. To report to top management regarding the performance of the quality management system and any improvement. if required.
3. To ensure the awareness of customer requirements throughout the organization.

Question No: 34 (Marks: 3)

www.ranapk.com

Flow chart is an effective tool for data collection and analysis. Comment on this statement.

This is right, flow chart is effective tool for data collection and analysis but it not gives a detailed picture. It normally helps people to visualize simple but important changes that could be happen in process. It also uses to identify the quality problems and areas for improvement.

Question No: 35 (Marks: 3)

What are the qualities of an effective team and the circumstances in which teams realize that the plan is not improved? (Marks=2+1)

Qualities

1. Effective team must achieve its goals
2. It improves the quality performance quickly.
3. Team must maintain and increase it strength as a unit.

Plan is not improved in below circumstances if it happens.

1. Goals are not clear
2. Improvement plan is not available
3. Roles are not defined properly
4. Loose communication

Question No: 36 (Marks: 5)

The policy of ABC Machine Works Ltd. is to provide products and services that meet the requirements of our customers in accordance with our quality policy. How the management and employees of this company are committed to achieving this policy?

When a company is committed to provide the products and services that meet the requirements of our customers in accordance with their quality policy then it means company has some quality policy and certifications from third party due to which are providing they are assured of product and services.

Because in company quality policy it is stated that company will follow the international and health related standards to provide the best product and services to others.

Like in ISO 9001:2000, quality management system is described and company has to follow it to remain ISO certified.

Question No: 37 (Marks: 5)

Performing is one of the stages of Team Growth. What can be the feelings of leader during this stage? Also discuss the role of a leader in “Performing”? (Marks=3+2)

Performing stage is very critical state for a leader because this is the time of to show and deliver something to others. To prove himself as leader. In this stage leader has to proven his role as a leader. As a leader he has to guide his team, motivate his team, take the responsibility and finish the work with team work.

Communicate everything clearly to team to perform at this stage. A leader should take his team as a unit with increasing strength with the passage of time.

- Forming
- Storming
- Norming
- Performing
- Adjourning
- Feelings
 - Insights into personal and group processes
 - Understanding each other's strengths and weaknesses
 - Satisfaction at team's progress
 - Close attachment to the team
- Performing: Leadership
- To build problem-solving and implementation skills, team leaders should
 - Update methods and procedures
 - Understand how to manage change
 - Advocate for the team with others
 - Monitor work progress and celebrate achievements

Leadership and team work 5 marks

While leadership and teamwork are different virtues, they are strongly related in business, sports, the military and volunteerism. It is easy to state that leaders lead, while teams follow leaders to reach goals and objectives. Yet, great teams have superior leaders as members. To paraphrase a

www.ranapk.com

common definition of solid leadership, "Leaders are people that other people want to follow." However, most outstanding leaders are also equally accomplished team players.

What are the various responsibilities of a steering committee and how can the leader of a team make the team members aware of the group process? 3

Most organizations practicing total quality have a steering committee, called a quality council by Juran and a quality improvement team by Crosby. Steering committees are responsible for **establishing policy for TQ** and for guiding the implementation and evolution of TQ throughout the organization. The top manager of the organization is usually on the steering committee, as is the manager with overall responsibility for quality- for example, the Vice President /Director of Total quality. The steering committee may meet fairly often when a TQ effort is getting started, but usually meets only monthly or quarterly once things are under way. This group makes key decisions about the quality process – how quality should be measured and what structures and approaches should be used to improve quality. The steering committee also periodically reviews the status of TQ and makes the adjustment necessary to ensure customer satisfaction and continuous improvement. In general, the steering committee has overall responsibility for the progress and success of the TQ effort.

What are the basic types of statistical process control charts and how can you compute the upper control limit and the lower control limit? 3

A control chart displays the state of control of a process. Time is measured on the horizontal axis, and the value of a variable on the vertical axis. A central horizontal line usually corresponds to the average value of the quality characteristic being measured. Two other horizontal lines represent the upper and lower control limits, chosen so that there is a high probability that sample values will fall within these limits if the process is under control – that is, affected only by common causes of variation. If points fall outside of the control limits or if unusual patterns such as shifts up or down, trends up or down, cycles, and so forth exist, special causes may be present.

Explain appraisal costs with the help of examples. 3

The costs associated with measuring, evaluating or auditing products or services to assure conformance to quality standards and performance requirements.

www.ranapk.com

A common example of appraisal costs is the expenses from inspections. An organization should establish an inspection of their products and incoming goods from a supplier before they reach the customer. This is also known as acceptance sampling, a technique used to verify that products meet quality standards.

What are the requirements of total quality for human resources and how can the managers ensure empowerment in the organization? 5

TQ HRM Requirements

- Empower individuals and teams
- Continually improve key personnel management processes
- Maintain a satisfying work environment
- Promote individual and group participation

For empowerment to occur, managers must undertake two major initiatives:

- Identify and change organizational conditions that make people powerless, and
- Increase people's confidence that their efforts to accomplish something important will be successful.

Discuss the motivational factors that stimulate companies to obtain ISO certification. 5

The International Organization for Standardization (ISO) issued a set of international standards for quality management adopted by more than (90) countries. Therefore, many firms have taken the initiative of obtaining quality certification for the purpose of sustaining competitive advantage and improve their financial performance. In addition, costs accountants, especially in manufacturing firms, started measuring the quality costs on a regular basis.

This paper examines the extent to which Bahraini companies obtained ISO certification; the motivation behind quality certification; and the factors which encourage firms to implement cost of quality reporting. The next section of the paper reviews the existing literature on cost of quality. Section three discusses the research method. Section four presents the findings of the study. The last section concludes the study, highlights its limitations, and suggests directions for future research.

www.ranapk.com

What are the various approaches that the organizations use to achieve cost leadership for high volume products? How can the benefits resulting from cost leadership be cancelled out?

To achieve cost leadership for high volume products, companies use a variety of approaches:

- Early manufacturing involvement in the design of the product both for make-versus-buy decisions and for assurance that the production processes can achieve required tolerances.
- Product design to take advantage of automated equipment by minimizing the number of parts, eliminating fasteners, making parts symmetric whenever possible, avoiding rigid and stiff parts and using one-sided assembly designs.
- Limited product models and customization in distribution centers rather than in the factory.
- A manufacturing system designed for a fixed sequence of operations. Every effort is made to ensure zero defects at the time of shipment. Work-in-process inventory is reduced as much as possible, and multi skilled, focused teams of employees are used.

A cost leader can achieve above-average performance if it can command prices at or near the industry average. However, it cannot do so with an inferior product. The product must be perceived as comparable with competitors or the firm will be forced to discount prices well below competitors' prices to gain sales. This can cancel any benefits that result from cost advantage.

For small and medium scale companies which usually do not enjoy a brand image, what benefits do they enjoy from the implementation of an ISO system? (3mark)

Benefits of ISO9001 certificate

For Small and Medium Scale companies, which normally do not enjoy much of brand image, ISO9001 certification helps to build confidence in the minds of customer organizations. This is particularly true in case of tenders and other contractual situations involving institutional buyers.

In India, where the Government is a prominent buyer, many of the public sector organizations have already started insisting on ISO9001 registration for vendor enlistment. In private sector also, the situation is not much different.

www.ranapk.com

Other benefits of ISO9001 registration are:

- Clarity in definition of authorities and responsibilities
- Enhanced corporate image and market positioning
- Better records and documentation in case of legal action
- Use of recognized mark (of certifying agency) on stationary and advertisement
- Reduction in the need for multiple second party assessments
- Better traceability to root causes of quality problems
- Rectification of errors at the earliest stage
- No repetition of errors

There are various stages of team growth, what can be the feelings of a leader during 'Formation' stage? Also discuss the role of leadership in 'Forming'. (5 mark)

Forming:-

Feelings:-

- Excitement, anticipation, optimism
- Pride in being chosen
- Suspicion, fear, anxiety

Forming: Leadership

To build trust and confidence, team leaders should

- Help members get to know each other
- Provide clear direction and purpose
- Involve members in developing and clarifying plans, roles, and ways of working together
- Provide information needed to get started

Explain briefly the following perspective in balance scorecard. (5 Marks)

(a) The Learning & Growth perspective

(b) The Business Process perspective

Perspectives

The balanced scorecard suggests that we view the organization from four perspectives, and to develop metrics, collect data and analyze it relative to each of these perspectives:

The Learning & Growth Perspective

This perspective includes employee training and corporate cultural attitudes related to both individual and corporate self-improvement. In a knowledge-worker organization, people -- the only repository of knowledge -- are the main resource. In the current climate of rapid technological change, it is becoming necessary for knowledge workers to be in a continuous learning mode. Metrics can be put into place to guide managers in focusing training funds where they can help the most. In any case, learning and growth constitute the essential foundation for success of any knowledge-worker organization.

Kaplan and Norton emphasize that 'learning' is more than 'training'; it also includes things like mentors and tutors within the organization, as well as that ease of communication among workers that allows them to readily get help on a problem when it is needed. It also includes technological tools; what the Baldrige criteria call "high performance work systems."

The Business Process Perspective

This perspective refers to internal business processes. Metrics based on this perspective allow the managers to know how well their business is running, and whether its products and services conform to customer requirements (the mission). These metrics have to be carefully designed by those who know these processes most intimately; with our unique missions these are not something that can be developed by outside consultants.

The Customer Perspective

Recent management philosophy has shown an increasing realization of the importance of customer focus and customer satisfaction in any business. These are leading indicators: if customers are not satisfied, they will eventually find other suppliers that will meet their needs. Poor performance from this perspective is thus a leading indicator of future decline, even though the current financial picture may look good.

In developing metrics for satisfaction, customers should be analyzed in terms of kinds of customers and the kinds of processes for which we are providing a product or service to those customer groups.

The Financial Perspective

Kaplan and Norton do not disregard the traditional need for financial data. Timely and accurate funding data will always be a priority, and managers will do whatever necessary to provide it. In fact, often there is more than enough handling and processing of financial data. With the implementation of a corporate database, it is hoped that more of the processing can be centralized and automated. But the point is that the current emphasis on financials leads to the "unbalanced" situation with regard to other perspectives. There is perhaps a need to include additional financial-related data, such as risk assessment and cost-benefit data, in this category.

Enlist and explain core leadership skills. (5 Marks)

- Vision
- Empowerment
- Value congruence
- Intuition (insight , perception or sixth sense)
- Self-understanding

E-Myth considers the five core skills of effective leadership:

- 1. Vision** This is the ability to formulate ideas about the business or parts of the business; to understand opportunities or the need for change; to create a mental picture of what the business will be in the future; and to articulate all of that clearly in words and images. At the highest level, it's the creation of the entrepreneur's dream.
- 2. Discrimination** being able to see what's important, to understand the available choices, and to make sound, practical decisions. Discrimination is free-form decision making rather than rule-based decision making. It's knowing what questions to ask, and being able to answer them in the absence of rules or previous experience.
- 3. Strategic Thinking** The ability to see the big picture and devise an effective path — the right actions — that will lead to realizing the vision. Inventing "the rules of your game" (as Michael Gerber puts it) and creating your business philosophy and key policies.
- 4. Commitment** This is the determination and energy to follow through and make the vision a reality even in the face of obstacles, opposition, uncertainty, and risk. Without an underlying passion for your vision, commitment is difficult to maintain.

www.ranapk.com

5. Inspirational Communication This is the skill of communicating vision and strategy, and being able to infuse the organization with enthusiasm, dedication, and some of your own spirit and passion.

Role of sponsor in core process of an organization (3 Marks)

Using the quality control tool of run chart, discuss that how it can help in managing absenteeism in a production based organization. 5
