BIO101 FINAL TERM PAPER BY TEAM HADI

Question No 1: Atoms join together by a process_____

- Link
- **BondingTEAM HADI VU**
- Molecule
- All

Question No 2: Flattened disks present in Golgi apparatus that are associated with endoplasmic reticulum are _____

- Cisternae.....TEAM HADI VU

- Ribosomes
- Cristae
- Plastids

Question No 3: A cross between a true breed plant animal with another true breeds plant'animal is called?

- Test cross
- Hybrid cross
- Pure cross
- All Above

Question No 4: The term that refers to division of the cytoplasm is:

- Cytokinesis.....TEAM HADI VU Apoptosis
- Fission
- Anaphase

Question No 5: During which stage of meiosis does crossing over occur?

- prophase II
- prophase I.....TEAM HADI VU
- telophase II
- anaphase I

Question No 6: Living organisms having more than 2 sets of chromosomes are called?

- Diploid
- Haploid
- PolyploidTEAM HADI VU
- Heteroploid

Question No 7: Which of the following statements is true about proteins?

- Proteins are polymers of glucose

- **Proteins are polymers of amino acidsTEAM HADI VU**

- Proteins are polymers of peptide bonds
- Proteins are polymers of disulfide bridges

Question No 8: A length of DNA that codes for a peptide or protein is called:

- Chromosome
- Nucleosome

- **GenesTEAM HADI VU**

- Amino acids

Question No 9: When the hydrocarbon chain contains a _____ the fatty acid is an unsaturated fatty acid

- **Double bondTEAM HADI VU**

- Single Bond
- Triple Bond

Question No 10: Study of functions and structure of genome is called

- Genetics

- **GenomicsTEAM HADI VU**

- Hereditary

Question No 11: At what temperature does annealing of DNA and primer take place?

- 85-95 C*
- 75-85C*
- **45-65 C***
- 55-65C*

Question No 12: Northern blot is used for the separation of

- **RNATEAM HADI VU**

- DNA

- Protein
- Protein DNA interaction

Question No 13: _____ are pyrimidine-to-pyrimidine and purine-to-purine substitutions

- Transversions
- **Transitions**TEAM HADI VU
- Translation
- Transcription

Question No 14: _____ is the specific component that does not come into play until there is an antigenic challenge to the organism

- Innate Immunity
- **Adaptive Immunity**TEAM HADI VU
- Active Immunity
- Passive Immunity

Question No 15: _____ can be acquired immunization which can be obtained by isolating gamma globulins from others individual

- **Natural Passive Immunization**TEAM HADI VU
- Active Passive Immunization
- Active Immunization
- Passive Immunization

Question No 16: Humans are..i.e., they eat plants (vegetables) and meat (chicken, beef).

- Decomposers
- Herbivore
- carnivores
- **omnivores**TEAM HADI VU

Question No 17: Which of the following is an example of Detritivores?

- Bear

- Lion
- Crows
- **Earthworms.....TEAM HADI VU**

Question No 18: From what source do cells get their food?

- Oxygen
- **Other cells**
- Carbon dioxide
- Blood

Question No 19: Left ventricle pushes blood towards_____

- hearts
- tricuspid vale
- **aortaTEAM HADI VU**
- lungs

Question No 20: In humans fully inflated lungs have a capacity of ---liters.

- 4L
- 3L
- **5L.....TEAM HADI VU**
- 6L

Question No 21: The removal of the metabolic wastes of an organism is:

- Respiration
- **ExcretionTEAM HADI VU**
- Defecation
- Renal artery

Question No 22: Interactions between biotic populations and abiotic factors in a community

- biosphere
- population
- community

- ecosystem

Question No 23: Which of the following animals are vertebrates?

- Fish
- Amphibians
- Reptiles
- **All of the mentioned options**

Question No 24: Filamentous algal species include

- Euglena
- Volvox
- **SpirogyraTEAM HADI VU**
- Chlamydomonas

Question No 25: Frogs are included in

- Secondary consumers
- Primary consumers
- **Tertiary consumersTEAM HADI VU**
- Decomposers

Question No 26: The term biotechnology was first used in

- 1950's
- 1960's
- **1970'sTEAM HADI VU**
- 1990's

Question No 27: Which one of these terms is used to show the formation of lost part of body?

- Binary fission
- Budding

- Multiple Fission
- **Regeneration.....TEAM HADI VU**

Question No 28: _____ is the phase in which phage infects a bacterium, hijacks the bacterium to make lots of phages, and then kills the cell by making it explode (lyse)

- **Lytic cycleTEAM HADI VU**
- Lysogenic cycle
- Estrous cycle
- Calvin cycle

Question No 29: The genetic material of viruses can be which of the following

- DNA
- RNA
- **DNA & RNA.....TEAM HADI VU**
- None of the mentioned options

Question No 28:

SUBJECTIVE

Question: What is Quaternary Structure of Protein?

Answer: Quaternary structure in proteins is the most intricate degree of organization still considered a single molecule. To be considered to have quaternary structure, a protein must have two or more peptide chains forming subunits. The subunits can be different or identical, and in most cases they are arranged symmetrically.

Question: What is Innate Immunity? 2 Marks

Answer: immunity that is present at birth and lasts a person's entire life. Innate immunity is the first response of the body's immune system to a harmful foreign substance. When foreign substances, such as bacteria or viruses, enter the body, certain cells in the immune system can quickly respond and try to destroy them.

Question: Is mutation beneficial or harmful? Justify your answer. 2 Marks

Answer: The majority of mutations are neutral in their effects on the organisms in which they occur. Beneficial mutations may become more common through natural selection. Harmful mutations may cause genetic disorders or cancer.

Question: Differentiate between Niche and habitat? 2 Marks

Answer: A habitat is a particular place where organisms live, i.e. address. A niche defines a specific role played by organisms in an ecosystem, i.e. profession. Habitat is not species-specific, and many species can occupy the same habitat. Niche is species-specific, and it supports only a single species.

Question: What are the advantages of biological control pest?

2 Marks

Answer: Biological control is particularly desirable because the tactic is environmentally safe, energy self-sufficient, cost-effective, sustainable, and can be readily incorporated into integrated pest management (IPM) programs.

Question: What is cell division write the name of its two types?

2

Marks

Answer: There are two types of cell division: mitosis and meiosis. Most of the time when people refer to “cell division,” they mean mitosis, the process of making new body cells. Meiosis is the type of cell division that creates egg and sperm cells. Mitosis is a fundamental process for life.

Question: Discuss the importance blood transfusion in human beings.

2 Marks

Answer: Blood transfusions replace blood that is lost through surgery or injury. This treatment also provides blood if your body is not making blood properly on its own.

Question: How does the immune system work?

3

Marks

Answer: When the body senses foreign substances (called antigens), the immune system works to recognize the antigens and get rid of them. B lymphocytes are triggered to make antibodies (also called immunoglobulins). These proteins lock onto specific antigens.

Question: Differentiate between saturated and unsaturated fatty acids with examples.

Sl.No	Saturated fatty acids	Unsaturated fatty acids
1.	These are the simplest form of fats. These are unbranched linear chains of CH ₂ groups joined together by carbon-carbon single bonds and have a terminal carboxylic acid. They do not have a carbon-carbon double bond.	These are complex fatty acids with bent hydrocarbon chains joined together by carbon-carbon double bonds and have a carboxylic acid group at terminal position. They have one or more carbon-carbon double bonds.
2.	In this type of fatty acids the hydrocarbon chains are linear and unbranched.	In this type of fatty acids the hydrocarbon chains are bent and branched.
3.	In saturated fatty acids the process of hydrogenation is not possible because all the carbon atoms in the hydrocarbon chain are already saturated with the maximum possible number of hydrogen atoms.	In unsaturated fatty acids the process of hydrogenation is possible because the double bonds can be converted to single bonds in addition to hydrogen atoms.
4.	These are mostly found in fats obtained from animal sources. For example - meat, whole milk and butter.	These are mostly found in fats obtained from plant sources. For example - vegetable oil, sunflower oil, mustard oil, avocado oil, etc.

Question: Write a note on structure of Fish. .

Answer: Fish are cold-blooded creatures having a backbone, gills, and fins. The head, trunk, and tail make up a normal fish's body. Two eyes, each with a well-developed nictitating membrane, two internal ears, two nostrils closed internally (except in lungfishes), and a mouth are found on the head.

Question: Explain the blood groups in human beings and classify the various groups on the basis of antigens and antibodies. .

Question: What are vertebrates? Discuss three main characteristics of vertebrates.

Question: Explain the process of initiation and elongation.

Question: Write down the properties of Prokaryotic genome. .

HADI VU PAST PAPER

WE DEAL ALL KIND OF VU PROJECT
(PHP, ANDROID, PYTHON)

DEAR STUDENTS

ARE YOU LOOKING
FOR ASSISTANCE

- 1) ASSIGNMENTS
- 2) QUIZZES
- 3) GDB
- 4) GRAND QUIZZES

We Provide, You Solution
of VU Academic Activities
include Assignments,
Quizzes, GDBs, Grand Quizzes.
If You Need Help in Services
Kindly inform us.
