

EDU 430 CURRENT ANSWERS BY TANIYA

Floating – It means something is moving freely without being fixed. In computers, it can refer to floating-point numbers used in calculations.

Hacking – The act of gaining unauthorized access to a computer system or network.

IP (Internet Protocol) – A set of rules that helps devices communicate over the internet.

File – A collection of data stored on a computer with a specific name and format.

POI (Point of Interest) – A specific location marked on a map, like a restaurant or school.

Grey Color MCQ – This might refer to a question about color coding in computers, like grey being a mix of black and white.

Assessment MCQs – Likely covered topics such as formative and summative assessment.

Short Questions

Crash – A crash happens when a computer or software stops working suddenly due to errors, bugs, or system overload. It may require restarting the system to function properly again. Crashes can occur due to hardware failure, software conflicts, or malware attacks.

Cache – Cache is a small, high-speed storage area that temporarily saves frequently used data. It helps in faster access to information, reducing the need to fetch data from the main memory or storage. Web browsers, CPUs, and applications use cache to improve performance.

Inactive Window – An inactive window is a window that is open but not currently being used. It remains in the background while another window is active. The user can switch back to an inactive window by clicking on it or using shortcut keys like Alt + Tab.

Hacker – A hacker is a person who gains access to computer systems, either legally or illegally. Ethical hackers (white hat) help secure systems, while black hat hackers break into systems for malicious purposes. Gray

hat hackers fall between these two, sometimes breaking into systems without permission but with good intentions.

Difference Between MAXD and MIND –

MAXD (Maximum Density) refers to the highest possible concentration of data stored in a given space. It optimizes storage capacity, allowing more data to be saved efficiently.

MIND (Minimum Density) refers to the least amount of data stored per unit, often used for low-data storage needs or when prioritizing speed over data quantity

Email – Email (Electronic Mail) is a digital method of sending and receiving messages over the internet. It allows users to communicate instantly using text, attachments, and multimedia files. Popular email services include Gmail, Yahoo, and Outlook.

Bootup – Bootup is the process of starting a computer, where the system loads its operating system and essential files. It includes steps like power-on self-test (POST), loading system drivers, and initializing hardware components.

Filter Configuration – Filter configuration controls what content can be accessed on a network. It is used to block harmful or unwanted websites, manage internet usage, and improve cybersecurity. Organizations use it to restrict access to inappropriate content.

BPS (Bits Per Second) – BPS measures internet speed by showing how many bits of data are transferred per second. Higher BPS means faster data transfer, which improves browsing, downloading, and streaming experiences.

Hacker – A hacker is a person who gains access to computer systems. Ethical hackers help secure systems, while black hat hackers break into networks for malicious reasons. Gray hat hackers operate between these two, sometimes hacking without permission but not always for harmful purposes.

IP Address – An IP (Internet Protocol) address is a unique number assigned to a device connected to the internet. It helps in identifying and locating devices for communication. There are two types: IPv4 and IPv6, with IPv6 offering a larger number of addresses.

Long Questions

5 Advantages of ICTs (Information and Communication Technologies):

1. **Fast Communication** – Emails, video calls, and messages are instant.
2. **Easier Learning** – Online courses, digital books, and educational apps.
3. **Global Connectivity** – Connects people worldwide for learning and work.
4. **Better Data Storage** – Stores large amounts of information safely.
5. **Efficient Work** – Automates tasks, saving time and effort.

How to Provide Educational Content Through ICTs:

1. **Online Learning Platforms** – Websites like Khan Academy and Coursera.
2. **Digital Libraries** – E-books and research materials online.
3. **Educational Apps** – Interactive tools for students.
4. **Video Lectures** – Teachers record lessons for students to watch anytime.
5. **Virtual Classrooms** – Zoom, Google Classroom, and Microsoft Teams.

Best and Relevant Strategies for Pedagogical Practices:

1. **Student-Centered Learning** – Focuses on students' needs and interests.
2. **Blended Learning** – Combines online and face-to-face teaching.
3. **Inquiry-Based Learning** – Encourages students to ask and explore questions.
4. **Collaborative Learning** – Students work in groups to solve problems.
5. **Technology Integration** – Using smart boards, apps, and multimedia in teaching.

Implications of ICT in Education

ICT (Information and Communication Technology) has a major impact on education:

- **Access to Information** – Students can find information easily from the internet.

- **E-learning** – Online courses allow students to learn from anywhere.
- **Interactive Learning** – Videos, quizzes, and animations make learning fun.
- **Teacher Efficiency** – Digital tools help teachers create lessons and manage students.
- **Assessment and Feedback** – Online tests and instant feedback improve learning.

ICT for Illiterate People

ICT helps people who cannot read or write by:

- **Audio and Video Content** – Learning through spoken words and images.
- **Voice Recognition Apps** – Allowing users to search and learn without typing.
- **Mobile Learning** – Apps with simple icons and voice instructions.
- **Community Radio** – Spreading important information in local languages.

Good Feedback Principles

Good feedback should be:

- **Timely** – Given as soon as possible.
- **Clear** – Easy to understand.
- **Specific** – Focused on what was done well and what needs improvement.
- **Actionable** – Helps students improve their work.
- **Encouraging** – Motivates students to do better.

How ICT Replaces Pedagogical Learning

- **Traditional Teaching** → **Online Learning** – Students learn from e-books and videos instead of textbooks.
- **Classroom Discussions** → **Virtual Classrooms** – Zoom and Google Meet replace face-to-face discussions.
- **Handwritten Notes** → **Digital Notes** – Students take notes using tablets and apps.
- **Fixed Timetable** → **Self-Paced Learning** – Online platforms allow flexible learning.

Uses of LMS (Learning Management System)

- **Organizes Courses** – Teachers upload lessons and assignments.
- **Tracks Progress** – Students can see their grades and feedback.
- **Encourages Interaction** – Students discuss and ask questions.
- **Online Assessments** – Teachers create quizzes and exams.
- **Saves Time** – Automates tasks like grading. **Strategies to Implement Education Management Information System (EMIS)**
- **Training for Teachers** – Teachers should know how to use EMIS.
- **Reliable Internet** – Schools need good internet for data sharing.
- **User-Friendly System** – Easy-to-use software for teachers and students.
- **Data Privacy and Security** – Protecting student records from hacking.
- **Regular Updates** – Keeping the system modern and efficient.

How Community and Radio Networks Benefit Education

- **Distance Learning** – Students in remote areas can listen to lessons.
- **Education for Illiterate People** – Learning through audio instead of text.
- **Emergency Education** – Teaching during school closures.
- **Engaging Content** – Stories, debates, and discussions.

Costs and Benefits of LMS Outside the Classroom

Costs:

- Expensive software and internet needed.
- Teachers need training.
- Students need devices.

Benefits:

- Learning anytime, anywhere.
- More resources and interactive content.
- Easier communication between teachers and students.

Disseminating Educational Content Using ICT

- **E-books and PDFs** – Digital books for students.
- **Educational Websites** – Resources like Khan Academy.
- **Social Media and YouTube** – Short learning videos.
- **Online Forums** – Students discuss topics with experts.
- **Podcasts and Audio Books** – Learning without reading.
