Question: 1

Which of the following is the correct way to generate an Index?

- A. INSERT INDEX index_name ON database_name;
- B. INSERT INDEX index_name ON table_name;
- C. CREATE INDEX index_name ON database_name;
- D. CREATE INDEX index_name ON table_name;

Question 2

Which of the following is the correct syntax to create UNIQUE Indexes?

- A. CREATE INDEX index_name ON table_name (column_name);
- B. CREATE INDEX index_name on UNIQUE table_name (column_name);
- C. CREATE INDEX UNIQUE index_name on table_name (column_name);
- D. CREATE UNIQUE INDEX index_name on table_name (column_name);

Question: 3

Which of the following is the name of view in the following SQL statement?

```
CREATE VIEW Class1 AS  
SELECT ClassID, Course Code, Venue  
FROM CLASS;
```

- A. ClassID
- B. CourseCode
- C. Class 1
- D. CLASS

Question: 4

Which of the following is also known as a virtual table?

- A. Schema
- B. Database
- C. View
- D. Join

Question: 5

What is "xyz" in the following MySQL statement?

```
CREATE VIEW xyz as SELECT a, b FROM t;
```

- A. Table name
- B. Column name
- C. Database name
- D. View name

Question: 6

Which of the following provides the least details about the working of the system?

- A. Detailed diagram
- B. Context diagram
- C. Level 1 diagram
- D. Level 2 diagram

Question: 7

In which normal forms, partial dependency is being removed?

- A. 1NF
- B. 2NF
- C. 3NF
- D. BCNF

Question: 8

_____ dependency occurs when one non-key attribute determines another non-key attribute.

- A. Transitive
- B. Partial
- C. Functional
- D. Associative

Question: 9

In----we eliminate transitive dependency.

- A. 1NF
- B. 2NF
- C. 3NF
- D. BCNF

Question: 10 (Marks: 1)

In order to add a record into the existing table "Class", which of the following command will help?

- A. Insert
- B. Update
- C. Alter
- D. Create

Question: 11 (Marks: 1)

INSERT command is an example of

- A. DDL
- B. DML
- C. DCL
- D. DOM

Question: 12 (Marks: 1)

Which of the following clause is used to filter the results of an SQL statement?

- A. SELECT
- B. WHERE
- C. INSERT
- D. ORDER BY

Question: 13 (Marks: 1)

Which of the following SQL query is used to retrieve all records having employee names starting with letter B?

- A. SELECT FROM Employee WHERE empName LIKE 'B%';
- B. SELECT FROM Employee WHERE empName LIKE '%B
- C. SELECT FROM Employee WHERE empName IN 'B';
- D. SELECT FROM Employee WHERE empName BETWEEN 'B%

Question: 14

Which of the following clause is used to sort the records in your result set?

- A. HAVING
- B. WHERE
- C. GROUP BY
- D. ORDER BY

Question: 15

Which of the following is an aggregate function?

- A. SQRTO
- B. LENO
- C. COUNTO
- D. UPPER()

Question:16

In ...join, first inner join is performed on the participating tables and then resulting table is projected on the attributes of one table.

- A. Theta
- B. Natural
- C. Semi
- D. Outer

Question: 17

While transforming ERD to relational model, in case of many to many relationships another relation is created with.....

- A. Composite key
- B. Primary key of first relation
- C. Primary key of other side relation
- D. Candidate key

Question: 18

Operations which involve one relation (table) are called unary operations, these operations are....

- A. Select, project
- B. Select, union
- C. Union, difference
- D. Project, Cartesian product

Question: 19

Which of the following Command creates a view named Class_View on CLASS table to show all the columns?

- A. CREATE VIEW CLASS AS SELECT FROM Class View:
- B. CREATE VIEW Class View AS SELECT FROM CLASS,
- C. SELECT FROM Class_View AS CREATE VIEW CLASS.
- D. SELECT FROM CLASS AS CREATE VIEW Class_View;

Question: 20 (Marks: 1)

Select correct statement for right outer join on table Teacher and Class.

- A. SELECT FROM Teacher RIGHT JOIN OUTER Class ON Teacher TeacherID=Class TeacherID;
- B. SELECT FROM Teacher RIGHT OUTER JOIN Class ON Teacher. Teacher ID-Class Teacher ID;
- C. SELECT FROM Teacher RIGHT OUTER JOIN ON Class with Teacher TeacherID=Class TeacherID,
- D. SELECT FROM Teacher having RIGHT OUTER JOIN ON Class with Teacher TeacherID=Class Teacher ID;

Question: 21 (Marks: 1)

Which is the derived attribute in the following entity?

(Stu Phone Stu Name date_of birth Beginn.com

Stu Id

Student

Choices:

- A. age
- B. date_of_birth
- C. Stu Phone
- D. Stu ID

Question 22

Which of the following is a super-type entity in the given diagram?

Vehicle

Car

Truck

Bus

- A. Car
- B. Vehicle
- C. Bus
- D. Truck

Question 23 (Marks: 1)

A relation has eight rows and five columns, what will be the degree and cardinality of relation?

- A. Degree 8 cardinality-8
- B. Degree 5 cardinality-8
- C. Degree 8 cardinality-5
- D. Degree 5 cardinality-5

Question: 24

SQL server is a relational database management system, and SQL is a

- A. Protocol
- B. Relational database
- C. Database
- D. Language

Cs403p

01	D	11	B	21	A
02	D	12	B	22	B
03	C	13	A	23	B
04	C	14	D	24	D
05	D	15	C	25	
06	B	16	C	26	
07	B	17	A	27	
08	A	18	A	28	
09	C	19	B	29	
10	A	20	B	30	

1. D. CREATE INDEX index_name ON table_name;
2. D. CREATE UNIQUE INDEX index_name on table_name (column_name);
3. C. Class1
4. C. View
5. D. View name
6. B. Context diagram
7. B. 2NF
8. A. Transitive
9. C. 3NF
10. A. Insert

- 11. B. DML
- 12. B. WHERE
- 13. A. SELECT FROM Employee WHERE empName LIKE 'B%';
- 14. D. ORDER BY
- 15. C. COUNTO (Note: The correct answer is COUNT, not COUNTO)
- 16. C. Semi
- 17. A. Composite key
- 18. A. Select, project
- 19. B. CREATE VIEW Class View AS SELECT * FROM CLASS;
- 20. B. SELECT * FROM Teacher RIGHT OUTER JOIN Class ON Teacher.TeacherID = Class.TeacherID;
- 21. A. age
- 22. B. Vehicle
- 23. B. Degree 5 cardinality-8
- 24. D. Language

Question: 25 (Marks: 5)

Draw the symbols for the following building blocks of the DFD.

- 1. Process
- 2. External Entity
- 3. Data store
- 4. Data Flow

5. Collector

Question: 29 (Marks: 5)

Consider the following entities

Student, Person, Teacher, Doctor

You are required to draw the super type and sub type relationships among these entities.

Question: 26 (Marks: 5)

Write SQL code to create a view named "TEACHER-LIST" to show Name and city of those teachers, who belongs to Lahore or Peshawar.

TEACHER (TeacherID, Name, Office, PhoneExt, DeptName, City, Qualification, Salary, Email)

Question: 27 (Marks: 5)

Table: Faculty Project

Faculty ID	ProjectID	ProjectName
------------	-----------	-------------

F001

P009

Geo Fencing

Consider the above table and perform the following Tasks.

1. Write an SQL statement to create a table named "FacultyProject" with given attributes. Use proper data type for each attribute.
2. Write an SQL statement to insert given record into the "Faculty Project" table.

Question 25

Solution:

The symbols for the building blocks of a Data Flow Diagram (DFD):

1. Process:

A process is represented by a circle or a rounded rectangle.

2. External Entity:

An external entity is represented by a square or a rectangle.

3. Data store:

A data store is represented by an open rectangle or a rectangle with a broken line.

4. Data Flow:

A data flow is represented by an arrow.

5. Collector:

Question 29

Solution:

Super Type: Person

- **Attributes:** Person ID, Name, Address, Date of Birth
- **Sub Types:**
 - **Student**
 - **Attributes:** Student ID, Course, Grade (in addition to Person attributes)
 - **Teacher**
 - **Attributes:** Teacher ID, Department, Subject (in addition to Person attributes)
 - **Doctor**
 - **Attributes:** Doctor ID, Specialty, Hospital (in addition to Person attributes)

In this relationship:

- "Person" is the super type, which has common attributes among all sub types.
- "Student", "Teacher", and "Doctor" are sub types, which inherit the attributes of "Person" and have additional attributes specific to each sub type.

This representation shows that a Student, Teacher, and Doctor are all types of Persons, and they share common attributes, but also have unique attributes specific to their respective roles.

Question 26

Solution:

SQL

CREATE VIEW TEACHER-LIST AS

SELECT Name, City

FROM TEACHER

WHERE City = 'Lahore' OR City = 'Peshawar';

Alternatively, you can use the IN operator:

SQL

CREATE VIEW TEACHER-LIST AS

SELECT Name, City

FROM TEACHER

WHERE City IN ('Lahore', 'Peshawar');

Both of these queries will create a view named "TEACHER-LIST" that shows the Name and City of teachers who belong to Lahore or Peshawar.

Question 27

Solution:

The SQL statement to create the "FacultyProject" table:

SQL

CREATE TABLE FacultyProject (

FacultyID CHAR(4),

ProjectID CHAR(4),

ProjectName VARCHAR(50)

);

Explanation:

FacultyID and ProjectID are assumed to be fixed-length codes, so I used the CHAR(4) data type.

ProjectName is a descriptive field, so I used the VARCHAR(50) data type to accommodate varying lengths.

Task 2: Insert Record

Here is the SQL statement to insert the given record into the "FacultyProject" table:

SQL

```
INSERT INTO FacultyProject (FacultyID, ProjectID, ProjectName)
VALUES ('F001', 'P009', 'Geo Fencing');
```

This statement inserts the record with FacultyID 'F001', ProjectID 'P009', and ProjectName 'Geo Fencing' into the FacultyProject table.
