**1. Message Passing (MPI):** Best suited for distributed memory systems where different processors or nodes do not share memory. It is ideal for large-scale parallelism in high-performance computing, where tasks are independent or loosely coupled, and communication between processes is frequent. Examples include scientific simulations and parallel applications across clusters.

**2. \*Shared Memory Models\*:** Ideal for multi-core or multi-processor systems with shared memory. It is useful when parallel tasks need to access common data structures quickly, such as in fine-grained parallelism scenarios. Applications like numerical simulations and image processing benefit from shared memory models.

**3. \*Lock-based Synchronization\*:** Suitable for situations where tasks must access shared resources in a controlled manner, such as in databases or multi-threaded applications. It helps ensure data consistency but can lead to performance bottlenecks due to locking overhead.

**4. \*Barrier Synchronization\*:** Commonly used in parallel algorithms where multiple processes or threads must synchronize at specific points. It's effective in loop parallelism or when tasks need to wait for others to reach a particular stage before proceeding.

**5. \*Lock-free and Wait-free Synchronization\*:** These techniques are crucial in real-time systems or performance-critical applications where minimizing delays due to locking is essential. They are suitable for high-throughput, low-latency applications, such as real-time data processing and high-performance gaming engines.

## Passing criteria for a course

| Letter Grade | Grade Points | Equivalent Percentage |
|--------------|--------------|-----------------------|
| A+           | 4.00         | 90-100                |
| A            | 4.00         | 85-89                 |
| A-           | 3.66 - 3.99  | 80-84                 |
| B+           | 3.33 - 3.65  | 75-79                 |
| B            | 3.00 - 3.32  | 71-74                 |
| B-           | 2.66 - 2.99  | 68-70                 |
| C            | 2.00 - 2.65  | 61-67                 |
| D            | 1.00 - 1.99  | 50-60                 |
| F            | 0.00         | 00-49                 |

## Passing Criteria for a Course:

The passing criteria is defined in such a way that it ensures the student shall be consistent in his studies throughout the semester.

# CS601 GDB SOLUTION IDEA

**ZB**

Therefore, for passing a course/subject, student shall fulfill the following:

- a) Secure minimum **20%** score in Formative Assessments/Mid terms
- b) Secure minimum **20%** score in Final Term Examinations.
- c) Secure at least **40%** marks in aggregate while fulfilling the above requirements

## Course Selection and Credit Hours

Q: How do I select courses when the course selection is open?

A: Follow these steps:

1. Check the credit hours allowed by your university (e.g., 21, 18, or 15 credit hours).
2. Each subject typically has 3 credit hours.
3. Divide the total allowed credit hours by 3 to determine how many subjects you can select.

Examples:

21 credit hours = 7 subjects

18 credit hours = 6 subjects

15 credit hours = 5 subjects

Remember, the university may allow different credit hours for each student, so check your specific allowance.

By following these steps, you can make informed decisions during course selection and manage your credit hours effectively.
