PSY406 Glossary

❖ **ABILITY GROUPING**

A method of creating groups of students who are similar in achievement or ability level.

❖ **ACADEMIC INTRINSIC MOTIVATION**

Motivation to learn characterized by curiosity, persistence, a desire to engage in challenging and novel tasks, and a focus on mastery of knowledge and skills.

❖ **ACADEMIC LEARNING TIME**

Time students spend engaged in meaningful, appropriate tasks.

❖ **ACCELERATION**

A method recommended for gifted students in which they move quickly through grades or receive instruction above grade level in one or two subjects.

❖ **ACCOMMODATION**

It involves modifying one's existing knowledge or creating new concepts when new information cannot fit into one's existing thinking.

❖ **ADOLESCENT EGOCENTRISM**

Difficulty differentiating between one's own thoughts and the thoughts of others.

❖ **ALGORITHM**

A prescribed sequence of steps that, if selected and followed correctly, guarantees a correct solution.

❖ **ASSIMILATION**

A process of adaptation that involves fitting new information or experiences into one's existing way of thinking.

❖ **ATTENTION**

The focusing of mental processes on particular environmental stimuli. Attention is defined as a cluster of integrated events and processes that determine which stimuli receive further processing.

❖ **ATTENTION-DEFICIT / HYPERACTIVITY DISORDER (ADHD)**

A neurological condition that impairs self-regulation, leading to problems maintaining attention, inhibiting impulsive or inappropriate responses, executive control over planning, monitoring progress, and selection of strategies in working memory.

❖ **AUTHORITARIAN PARENTING**

High level of control in which rules are enforced, yet emotional connectedness is lacking.

❖ **AUTOMATICITY**

The ability to respond accurately, quickly, and using few cognitive resources such as attention and strategies while performing a mental or physical skill.

❖ **AUTONOMY**

A component of self-determination theory referring to a feeling of having choice and control over one's actions.

❖ **BABBLING**

Repetitive consonant-vowel combinations produced by infants, such as dadadada.

❖ **BETWEEN-CLASS ABILITY GROUPING**

A practice typical in high school that involves using test scores or past performance to place students into curriculum tracks in which all their classes are with students of similar abilities.

❖ **BLOOM'S TAXONOMY**

A categorization of six learning objectives which includes lower-level objectives (remember, understand, apply) and higher-level objectives (analyze, evaluate, create).

❖ **CENTRAL EXECUTIVE**

The part of working memory that is responsible for monitoring and directing attention and other mental resources.

❖ **CENTRAL TENDENCY**

A score that is typical or representative of the entire group.

❖ **CEREBRAL CORTEX**

Extensive outer layer of gray matter of the two cerebral hemispheres, largely responsible for higher brain functions, including sensation, voluntary muscle movement, thought, reasoning, and memory.

❖ **CLASS MEETINGS**

A format for participatory classroom management in which teachers and students make joint decisions about class rules and consequences, room arrangement, and preferred activities.

❖ **COGNITIVE-BEHAVIOR MANAGEMENT (CBM)**

Technique that teaches students to regulate their own behavior using a series of instructions that they memorize, internalize, and apply to different school tasks.

❖ **COMPETENCY BELIEF**

Belief that one has the ability to perform a task or succeed at an activity.

❖ **CONCEPTUAL KNOWLEDGE**

A form of mental representation that reflects an understanding of declarative or procedural knowledge.

❖ **CONTINGENCY MANAGEMENT**

An approach to behavior modification involving the use of consequences that are tied to specific behaviors.

❖ **CONTROL**

Behavioral aspect of parenting in which parents provide limits and discipline.

❖ **CONVERGENT THINKING**

Reaching one conclusion or right answer

❖ **COOPERATIVE LEARNING**

A method of grouping students together to work collaboratively characterized by five elements positive interdependence, individual and group accountability, interpersonal skills, face-to-face interaction, and group processing.

❖ **CORRELATIONAL DESIGNS**

Research design that attempts to make connections between two variables

❖ **CREATIVE ABILITIES**

The ability to generate novel ideas and take risks in pursuing implementation of ideas.

❖ **CREATIVITY**

A variety of traits, skills, and capacities that lead an individual to think divergently and generate novel ideas or products.

❖ **DAILY LESSON PLANS**

Instruction plan for one day that may have various formats depending on grade level and subject area and include many components such as objectives, materials needed, and assessments.

❖ **DECAY**

A hypothesized weakening over time of information stored in long-term memory, especially if the information is used infrequently or not at all.

❖ **DEDUCTIVE REASONING**

A form of logical thinking that moves from the general to the specific.

❖ **DEMONSTRATION**

A type of performance task in which the student shows he can use his knowledge or skills to complete a well-defined, complex task.

❖ **DEVIATION IQ**

A standard score derived from raw scores; it indicates a test-taker's performance relative to all other test-takers having similar characteristics.

❖ **DIRECT INSTRUCTION**

A teaching method based on behaviorist principles which uses teacher control, structured lessons, and extensive practice.

❖ **DISABILITY**

The inability to perform some behavior, task, or skill.

❖ **DISCRIMINATION**

1) Treating students differently based on prejudice feelings or biased beliefs about a particular group; 2) learning in classical conditioning that includes differentiating between similar, but different, stimuli.

❖ **DIVERGENT THINKING**

Ability to "think outside the box" by generating multiple ideas or solutions to a problem.

❖ **Educational Psychology**

Educational Psychology is the scientific study of the behavior of the learner in relation to his educational environment

❖ **EGOCENTRIC**

Thinking about the world primarily from one's own physical or cognitive viewpoint.

❖ **EGOCENTRISM**

A focus on the self with little consideration for other people or their perspectives.

❖ **EMPATHY**

The ability to experience and understand the emotions or feelings of someone else.

❖ **ENCODING**

Changing the format of new information as it is being stored in memory.

❖ **EPISODIC BUFFER**

A temporary storage system that integrates information from the visuospatial sketchpad, phonological loop and long-term memory into a single representation within working memory.

❖ **EVALUATION**

An executive process in cognition allowing individuals to appraise the outcomes of the cognitive strategies used; the process of making subjective judgments about a student's performance or product; the subjective interpretation of a measurement or test score.

❖ **EXPERIMENT**

A form of performance task in which a student plans, conducts, and interprets the results of research.

❖ **EXTINCTION**

Strategy used to decrease an inappropriate behavior by no longer providing reinforcement for that behavior, or ceasing to provide the pairing between stimuli and response.

❖ **EXTRINSIC MOTIVATION**

A motivational orientation in which individuals engage in an activity or behavior to obtain an external outcome such as a reward or praise.

❖ **FAIRNESS**

The degree to which all students have an equal opportunity to learn and demonstrate their knowledge and skill.

❖ **FORMAL ASSESSMENT**

A pre-planned systematic attempt to discover what students have learned.

❖ **FORMATIVE ASSESSMENT**

Provides feedback that helps the teacher guide students' learning while it is still in progress.

❖ **FUNCTIONAL FIXEDNESS**

The inability to use objects or tools in a new way.

❖ **GENERALIZATION**

Learning can be expanded beyond a specific stimulus to other similar stimuli.

❖ **GIFTEDNESS**

An elusive trait characterized by high achievement in one of a variety of domains.

❖ **GROUP WORK**

A structure in which students work in groups but do not necessarily need to work cooperatively.

❖ **GROUP-ADMINISTERED IQ TESTS**

An approach to IQ testing in which an examiner administers an IQ test to a group of individuals in a paper-and-pencil format.

❖ **GROWTH NEEDS**

Higher level needs in Maslow's Hierarchy of Needs: intellectual competence, aesthetic appreciation, and self-actualization.

❖ **HEURISTIC**

A general problem-solving strategy that relies on common sense or rule of thumb.

HIGHER-ORDER THINKING

Thinking that involves going well beyond information specifically learned (e.g., analyzing, applying, or evaluating it).

❖ **HUMANISTIC THEORIES**

Theories which emphasize factors intrinsic to the individual, such as needs, choice, self-determination, and self-actualization as sources of motivation.

❖ **HYPOTHESIS TESTING**

Examination of research data and results to determine what conclusions reasonably can be drawn to support or refute a stated hypotheses.

❖ **IDENTITY ACHIEVED**

Adolescents who have explored and made commitments in occupations, academic skills, friendships and values and commit to certain goals and values.

❖ **IMPLICIT KNOWLEDGE**

Knowledge that we are not conscious of recalling, but influences behavior or thought without our awareness.

❖ **INDIVIDUALIZED EDUCATION PROGRAM**

A plan for students with disabilities who are eligible for special education, which outlines curricula, educational modifications, and provision of services intended to enhance or improve the student's academic, social, or behavioral skills.

❖ **INDUCTIVE REASONING**

Logical thinking that moves from the use of specific examples to formulate a general principle.

❖ INFORMAL ASSESSMENT

Ongoing, day-to-day techniques such as listening, observing students' interactions, asking questions, and reading journal entries in order to record information for the purpose of providing feedback.

❖ INFORMATION PROCESSING THEORY

A theoretical perspective that focuses on the specific ways in which individuals mentally think about and "process" the information they receive.

❖ INTELLECTUAL DISABILITY

A disability characterized by significant limitations in intellectual functioning and adaptive behavior (formerly called mental retardation).

❖ INTRINSIC MOTIVATION

A motivational orientation in which individuals engage in an activity or behavior which is rewarding in and of itself.

❖ Introspection

In the early days of the evolution of Psychology, behavior was studied only through a kind of self-examination of inner observation called introspection.

❖ LAW OF EFFECT

Behaviors that are associated with good consequences are more likely to occur, whereas behaviors that are associated with bad consequences are less likely to occur again.

❖ Law of Exercise

Law of Exercise means connections become strengthened with practice, and weaken when practice is discontinued. He said that intelligence is a function of the number of connections made.

❖ LEARNING

Change in behavior or knowledge.

❖ LEARNING OBJECTIVE

Specific descriptions of what students will know or be able to do once they have completed the lesson.

❖ LOCI METHOD

A method in which you imagine a familiar place and pick out particular locations. When you need to remember a list of items, you use the locations as pegs on which to hang items to be remembered

❖ LOCUS OF CONTROL

An individual's belief that outcomes or events are caused by either external factors outside of one's control (external locus) or internal factors (internal locus).

❖ **LONG-TERM MEMORY**

The component of memory that holds knowledge and skills for a relatively long period of time.

❖ **MEASUREMENT**

A quantitative or descriptive number (score) assigned to describe the extent to which someone possesses a certain attribute or skill.

❖ **MINORITY GROUP**

A group of people with less power in comparison to the majority group.

❖ **MISBEHAVIOR**

Any behavior that disrupts the learning environment of the classroom

❖ **MNEMONIC**

A special memory aid or trick designed to help students learn and remember a specific piece of information.

❖ **Naturalistic observation**

Sometimes behavioral events are observed and recorded under natural conditions by some person or persons. Such observational approach is termed as naturalistic observation.

❖ **NEUROTRANSMITTER**

A chemical substance that transmits nerve impulses across a synapse.

❖ **OBSERVATIONAL LEARNING**

Learning by observing and imitating others' (models) behaviors.

❖ **OBSERVATIONS**

Type of measure used in research that includes watching or viewing the behavior of individuals.

❖ **OVERLAPPING**

The ability to deal with misbehaviors without interrupting the flow of an ongoing lesson or activity.

❖ **OVERLEARNING**

The process of continuing practice after students have become accurate at performing a skill.

❖ **OVERT AGGRESSION**

Behaviors intended to harm someone physically.

❖ **PERFORMANCE ASSESSMENT**

Any form of assessment that requires students to carry out an activity or develop a product in order to demonstrate skill or knowledge.

❖ **PQ4R**

Instructional strategy used to increase reading comprehension that includes several steps: preview, question, read, reflect, recite, and review.

❖ **PREJUDICE FEELINGS**

Rigid and irrational generalizations about a group or category of people.

❖ **PROACTIVE CLASSROOM MANAGEMENT**

A preventive approach that integrates behavioral management methods with effective instruction to facilitate achievement. It focuses on the group dimensions of classroom management rather than the behavior of individual students.

❖ **PROBLEM SOLVING**

The means we use to reach a goal in spite of an obstacle or obstacles.

❖ **PROCEDURAL KNOWLEDGE**

Knowledge concerning how to perform a certain skill or task.

❖ **PROJECT**

A long-term activity that results in a student product of some kind, such as a model, a functional object, a substantial report, or a collection.

❖ **QUASI-EXPERIMENTAL DESIGNS**

Research design that attempts to demonstrate a cause-effect relationship when random assignment is not possible and manipulating the independent.

❖ **REGROUPING**

Placing students of the same grade into homogeneous groups only for reading or mathematics based on their current skill level, and continually changing students' group placement based on re-evaluation of their skills.

❖ **REHEARSAL**

A cognitive process in which information is repeated over and over as a possible way of learning and remembering it. When it is used to maintain information in working memory, it is called maintenance rehearsal. When it is connected with prior knowledge and expanded upon, it is called elaborative rehearsal.

❖ **REINFORCEMENT**

A consequence that is given after display of a behavior, which will increase the likelihood that an individual will perform the behavior again.

❖ **RELATIONAL AGGRESSION**

Behaviors specifically intended to damage another person's relationships.

❖ **RELIABILITY**

The consistency of the test score or results.

❖ **RESPONSE SET**

Tendency to respond to events or situations in the way that is most familiar to us.

❖ **ROTE MEMORIZATION**

Memorizing information without necessarily understanding it.

❖ **SELF-CONCEPT**

A cognitive aspect in which an individual has a perception or description about themselves.

❖ **SELF-DETERMINATION**

Autonomy, or the feeling of having choice in one's actions rather than being controlled or pressured; also refers to a theory of motivation in which individuals are motivated intrinsically by needs for autonomy, competence, and relatedness.

❖ **SELF-EFFICACY**

One's belief about or expectation for success on a particular task.

❖ **SELF-ESTEEM**

An affective aspect in which an individual evaluates components of him or herself and feels either as good or bad.

❖ **SELF-EVALUATION**

Determining the quality of the judgment (good or bad) and possibly providing self-imposed consequences.

❖ **SELF-INTERROGATION**

Asking questions to gauge whether one's newly learned material has been mastered.

❖ **SELF-JUDGMENT**

Comparing one's own performance to a predetermined goal or standard.

❖ **SELF-WORTH**

One's overall evaluation of worth as a person; also refers to a theory of motivation in which feelings of competence affect one's self worth and consequently motivation to achieve in school.

❖ **SENSORY MEMORY**

A component of memory that holds incoming information in an unanalyzed form for a very brief period of time (probably less than a second for visual input and two or three seconds for auditory input).

❖ **SHAPING**

Behavioral strategy used to increase an appropriate behavior by reinforcing small steps towards the behavior.

❖ **SOCIAL SKILLS**

The ability to reason, think through, pick up cues, and make appropriate decisions with respect to interpersonal relationships.

❖ **STANDARD SCORES**

Scores that are created by converting raw scores, typically using the mean and standard deviation, into scores that more easily and accurately describe score differences as compared to some other types of scores.

❖ **STANDARDIZED APTITUDE TESTS**

Tests that assess future potential or capacity to learn in general or in a specific domain.

❖ **SYSTEMATIC DESENSITIZATION**

A technique that combines relaxation training with gradual exposure to an anxiety-provoking stimulus to reduce anxieties and fears.

❖ **TEACHER EFFICACY**

A teacher's belief that he or she has the capabilities to transmit knowledge and manage the classroom in order to teach all students effectively.

❖ **THEORY OF MULTIPLE INTELLIGENCES**

A theory of intelligence proposed by Howard Gardner consisting of eight separate but interacting intelligences.

❖ **TWO-FACTOR THEORY OF INTELLIGENCE**

One of the first theories of intelligence which posited that performance on intelligence tests could be attributed to a general mental ability, g, and abilities in specific domains, s. See also other theories of intelligence: theory of multiple intelligences and theory of successful intelligence.

❖ **UNCONDITIONED RESPONSE**

The behavior that automatically occurs due to the unconditioned stimulus.

❖ **UNCONDITIONED STIMULUS**

The behavior that evokes an automatic response.

❖ **VICARIOUS PUNISHMENT**

Behaviors are displayed less frequently if a model has been punished for those behaviors.

❖ **VICARIOUS REINFORCEMENT**

Behaviors are displayed more frequently if a model has been reinforced for those behaviors.

❖ **VISUOSPATIAL SKETCHPAD**

Part of working memory. A holding system for visual and spatial information.

❖ **WITHIN-CLASS ABILITY GROUPING**

Forming groups of students in a self-contained classroom in which groups are of similar ability

❖ **WORKING MEMORY**

A component of memory that holds and processes a limited amount of information; also known as short-term memory. The duration of information stored in working memory is probably about five to twenty seconds.
