CS604 Quiz File

السلام وعلیکم!

امید کرتا ہوں کہ آپ سب خیریت سے ہوں گے کافی دنوں کی محنت کے بعد الحمد للہ
ورچوئل یونیورسٹی کے مڈ ٹرم امتحان کے لیے فائلز تیار کر لی ہیں امید کرتا ہوں کہ آپ
سب سٹوڈنٹس کے امتحانات میں بہت فائدہ مند ہوں گی۔ فائلز میں کسی قسم کی کوئی بھی
غلطی ہو گئی ہو تو اس کے لیے معذرت خواہ ہیں انشاء اللہ مزید محنت سے ان فائلز کو بہتر بنائیں
گے۔ آپ سب سٹوڈنٹس سے گزارش ہے کہ ہمارے یوٹیوب چینل اور ویب سائٹ کو فالو
کر لیں۔

مکمل پیپرز آپ کو میری ویب سائٹ پہ ملیں گے لنک نیچے دیا گیا ہے۔

Here is Website Link: <https://hbdanish.me/>

Here is YouTube Channel Link:

https://www.youtube.com/@Danish_Khagga

اگر آپ لوگ اپنا ایل۔ ایم۔ ایس مینڈل کروانا چاہتے ہیں یا اسائنمنٹس کو ریز کروانا چاہتے
ہیں تو اس نمبر پہ واٹس ایپ کریں۔

CS604 Quiz File

Question #1: After fork() system call is made, parent and child processes have their separate copy of _____.

- A) File mode creation mask
- B) Environment
- C) File descriptors
- D) Nice value

Answer: B) Environment

Question #2: Which of the following two operations are provided by the IPC facility?

- A) Send & Delete message
- B) Write & Delete message
- C) Delete & Receive message
- D) Receive & Send message

Answer: D) Receive & Send message

Question #3: Which of the following statements is not true regarding Cooperating processes?

- A) It may affect or be affected by any other process executing in the system.
- B) It constructs the system in a modular fashion, dividing the system functions into separate processes or threads.
- C) It provides an environment to allow concurrent users to access the same resources.
- D) It provides an environment to run parallel processes to speed up computation.

Answer: D) It provides an environment to run parallel processes to speed up computation.

Question #4: The Operating system is a layer of software between _____ and _____.

- A) Dos, Windows
- B) Kernel, hardware
- C) Hardware, software application
- D) Windows, Kernel

Answer: C) Hardware, software application

Question #5: Which of the following are TRUE for direct communication?

- A) A communication link can be associated with exactly two processes
- B) Exactly $N/2$ links exist between each pair of processes (N = max. number of processes supported by the system)
- C) A communication link can be associated with N number of processes (N = max. number of processes supported by the system)
- D) Exactly two links exist between each pair of processes

Answer: A) A communication link can be associated with exactly two processes

Question #6: A parent process calling _____ system call will be suspended until children processes terminate.

- A) Fork
- B) Exit
- C) Exec
- D) Wait

Answer: D) Wait

Anonymous

Question #7: An operating system is easily portable between varying hardware designs in _____ structural approach.

- A) Micro kernels
- B) Virtual Machines
- C) Simple Layered

Answer: A) Micro kernels

Question #8: A ----- signal is generated when a write is performed to a FIFO that no process is opened for reading.

- A) SIGFIFO
- B) SIGPIPE
- C) Unnamed PIPE
- D) Named PIPE

Answer: B) SIGPIPE

Anonymous

Question #9: A _____ system has well-defined, fixed time constraints, and if the system does not produce output for an input within the time constraints, the system will fail.

- A) Real-time
- B) Limited
- C) Android
- D) Operating

Answer: A) Real-time

Question #10: You can use the `mv file1 file2` command to move _____.

- A) This command will create a copy of file1
- B) file1 to file2.
- C) This command will not work for moving files
- D) file 2 to file 1

Answer: B) file1 to file2.

Question #1: What is used to request the OS by the process to take an I/O or initiating child process?

- a) Trap
- b) Signal
- c) System call
- d) Interrupt

Answer: c) System call

Question #2: Which system call is used to write to a file or FIFO or any other IPC channel?

- a) read
- b) write
- c) fork
- d) open

Answer: b) write

Question #3: The creating process is called a _____ process while the new processes are called the _____ of that process.

- a) Children, parent
- b) None of the given options
- c) Parent, children
- d) Zombie, single

Answer: c) Parent, children

Question #4: Which of the following is not a major advantage of a multi-programming system?

- a) CPU utilization can be increased
- b) More than one job can be processed at a given time
- c) If more processes exist, the rest must wait until the CPU is free and can be rescheduled
- d) Jobs can be completed quickly

Answer: c) If more processes exist, the rest must wait until the CPU is free and can be rescheduled

Question #5: You can use the `mv file1 file2` command to move _____.

- a) file1 to file2.
- b) file2 to file1.
- c) This command will not work for moving files.
- d) This command will create a copy of file1.

Answer: a) file1 to file2.

Question #6: Which of the following are TRUE for direct communication?

- a) A communication link can be associated with N number of processes (N = max. number of processes supported by the system).
- b) Exactly two links exist between each pair of processes.
- c) Exactly $N/2$ links exist between each pair of processes (N = max. number of processes supported by the system).
- d) A communication link can be associated with exactly two processes.

Answer: d) A communication link can be associated with exactly two processes.

Question #7: For reading input, which of the following system call is used?

- a) write
- b) change
- c) read
- d) rd

Answer: c) read

Question #8: After the fork() system call is made, the parent and child processes have their separate copy of _____.

- a) File descriptors
- b) Nice value
- c) File mode creation mask
- d) Environment

Answer: a) File descriptors

Question #9: If a parent exits before terminating its children processes, these children are handed over to _____ process.

- a) Sibling
- b) Daemon
- c) Init
- d) Root

Answer: c) Init

Question #10: If the size of a process is 376052 bytes and its smallest physical memory address is 242785, its address space cannot exceed beyond _____.

- a) 376053
- b) 618836
- c) 376051
- d) 618837

Answer: a) 376053

Question #1:

Critical section is a place where a certain shared structure is updated. Its solution requires certain precautions; one of them is the access to the critical section by one process at a time only. What is this condition termed as?

- a) Progress
- b) Entry section
- c) Bounded waiting
- d) Mutual exclusion

Answer: d) Mutual exclusion

Question #2:

_____ scheduling algorithm is sometimes called shortest remaining time first scheduling algorithm.

Select the correct option:

- a) FCFS
- b) Preemptive Shortest Job First
- c) Priority Scheduling
- d) Non-preemptive SJF

Answer: b) Preemptive Shortest Job First

Question #3:

When processes are generated using the `fork()` system call and then coordinated with each other using IPC channels, and they utilize separate address spaces for each process (parent, child), kernel resources, and IPC channels. This makes it more heavy. Which strategy can be used to make it light?

Select the correct option:

- a) Use of Batch systems
- b) Use of threads
- c) Termination of child processes when they become more
- d) Scheduling of each process

Answer: b) Use of threads

Question #4:

UNIX System V scheduling uses queues, which run _____ algorithm.

Select the correct option:

- a) First Come First Serve
- b) Shortest Remaining Time First
- c) Shortest Job First
- d) Round Robin

Answer: a) First Come First Serve

Question #5:

In the critical section problem, _____ requirement illustrates that, "There exists a bound on the number of times that other processes are allowed to enter their critical sections after a process has made a request to enter its critical section and before that request is granted."

Select the correct option:

- a) Fast execution
- b) Mutual exclusion
- c) Bounded waiting
- d) Progress

Answer: c) Bounded waiting

Question #6:

Which is not a parameter of `pthread_create()`?

Select the correct option:

- a) Thread ID
- b) Function

- c) Thread attributes
- d) Return status

Answer: a) Thread ID

Question #7:

The priority of a process can be changed using _____ command.

Select the correct option:

- a) cat
- b) cmd
- c) grep
- d) nice

Answer: d) nice

DANISH

HANIF

Question #8:

The number of processes completed per unit time is called _____.

Select the correct option:

- a) Response time
- b) Dispatch latency
- c) Turnaround time
- d) Throughput

Answer: d) Throughput

Question #9:

In Unix/Linux environment, Ali wants to know the number of processes running on the system and their status, the number of CPUs in the system and their usage, amount of main memory and its usage. Which of the following command will help in this regard?

Select the correct option:

- a) \$ fifo
- b) \$ ps
- c) \$ top
- d) \$ gcc

Answer: c) \$ top

Question #10:

You can use the `bg` command to put the current or a suspended process into the background. What is the correct syntax of the `bg` command from the following _____.

Select the correct option:

- a) `bg [job#]`
- b) `bg [%id]`
- c) `bg [%job_id]`
- d) `bg [id#]`

Answer: c) `bg [%job_id]`

Question #1: Consider a scenario in which one process P1 enters its critical section, and no other process is allowed to execute in its critical section. This is called -----

- a) Progress
- b) Multithreading
- c) Context switching
- d) Mutual exclusion

Answer: d) Mutual exclusion

Question #2: _____ is not a system call in Linux.

- a) `mknod`
- b) `open`

c) read

d) mkfifo

Answer: a) mknod

Question #4: Processes P1, P2, P3, P4 enter the ready queue at times 0, 3, 3, 11 with burst times P1=8, P2=2, P3=1, P4=1. With Shortest Remaining Time First, _____ process is given CPU at time T=3.

a) P2

b) P1

c) P4

d) P3

Answer: a) P2

Question #5: A thread shares its resources (like data section, code section, open files, signals) with _____.

a) Other threads that belong to similar processes

b) All of the mentioned

c) Other process similar to the one that the thread belongs to

d) Other threads that belong to the same process

Answer: d) Other threads that belong to the same process

Question #6: Concurrent processes must be synchronized to prevent _____.

a) Race condition

b) Critical Section

c) Mutual exclusion

d) Waiting

Answer: a) Race condition

Question #7: _____ displays information about the top processes.

a) lsc

b) dc

c) top

Answer: c) top

Question #8: To display all processes _____ option is used with the ps command.

a) -e

b) -u

c) -l

d) -a

Answer: a) -e

Question #9: _____ multi-threading model provides full concurrency.

a) Many-to-Many

b) Many-to-One

c) One-to-One

d) One-to-Many

Answer: a) Many-to-Many

Question #10: The procedure "The time at which the process finished working MINUS the arrival time of the process MINUS CPU burst for that process" will help calculate the _____.

- a) RR Scheduling
- b) Non-preemptive Shortest Job First scheduling.
- c) FCFS
- d) Preemptive Shortest Job First scheduling.

Answer: c) FCFS
