

Question # 7 of 10 (**Start time: 12:55:04 PM, 07 July 2025**)

Which keyword is used to define a template in C++?

Select the correct option

☐	typename
☒	template
☐	function
☐	class

Question # 9 of 10 (Start time: 12:59:02 PM, 07 July 2025)

Which keyword is used to define a template in C++?

Select the correct option

☐	function
☐	class
☐	typename
☒	template

Question # 10 of 10 (**Start time: 12:59:14 PM, 07 July 2025**)

What keyword is used to define a generic function template?

Select the correct option

☒	template
☐	typename
☐	generic
☐	class

Question # 3 of 10 (**Start time: 12:53:56 PM, 07 July 2025**)

Which of the given is not a component of STL?

Select the correct option

☒	Cursor
☐	Container
☐	Iterator
☐	Algorithm

Question # 6 of 10 (**Start time: 12:54:51 PM, 07 July 2025**)

What keyword is used to define a generic function template?

Select the correct option

☐	typename
☐	generic
☐	class
☒	template

Question # 7 of 10 (**Start time: 12:58:30 PM, 07 July 2025**)

The partial specialization pattern T^* says that this specialization is to be used for every -----.

Select the correct option

☐	Data type
☐	Meta type
☐	Virtual type
☒	Pointer type

Question # 10 of 10 (Start time: 12:55:49 PM, 07 July 2025)

What is the purpose of a generic algorithm in C++?

Select the correct option

☐	To create run-time polymorphism
☒	To make algorithms independent of data structures
☐	To handle integer data only
☐	To avoid the use of pointers

Question # 1 of 10 (**Start time: 12:57:07 PM, 07 July 2025**)

Which of the following function is used to add an element to the end of a vector?

Select the correct option

☐	<code>back()</code>
☒	<code>push_back()</code>
☐	<code>insert()</code>
☐	<code>end()</code>

Question # 5 of 10 (**Start time: 12:57:55 PM, 07 July 2025**)

What feature enables same-named template functions to exist?

Select the correct option

☒	Function overloading
☐	Inheritance
☐	Polymorphism
☐	Specialization

Question # 8 of 10 (Start time: 12:58:43 PM, 07 July 2025)

Which of the following is the correct syntax for a function template in C++?

Select the correct option

☐	<code>template void func<class T>(T a);</code>
☐	<code>func<class T>(T a);</code>
☒	<code>template<class T> void func(T a);</code>
☐	<code>template<type T> func(T a);</code>

Question # 1 of 10 (Start time: 12:53:24 PM, 07 July 2025)

Which of the following is the correct syntax for a function template in C++?

Select the correct option

☒	<code>template<class T> void func(T a);</code>
☐	<code>template<type T> func(T a);</code>
☐	<code>template void func<class T>(T a);</code>
☐	<code>func<class T>(T a);</code>

Question # 3 of 10 (**Start time: 12:57:30 PM, 07 July 2025**)

What does the compiler check first during template resolution?

Select the correct option

☐	Function overloading
☐	General template
☒	Complete specialization
☐	Partial specialization

Question # 2 of 10 (Start time: 12:53:41 PM, 07 July 2025)

Which of the following is an example of partial specialization?

Select the correct option

☐	<code>template<class T, class U></code>
☒	<code>template<class T, float></code>
☐	<code>template<int , float , char></code>
☐	<code>template<int></code>

Question # 5 of 10 (Start time: 12:54:35 PM, 07 July 2025)

If a function template has parameters `T` and `U`, calling `func(1, 2.5)` results in:

Select the correct option

☒	T=int, U=double
☐	Both deduced as double
☐	Both deduced as int
☐	Compilation error

Question # 4 of 10 (**Start time: 12:57:43 PM, 07 July 2025**)

If `Vector<char* >` is instantiated, which version will the compiler choose?

Select the correct option

☐	Function overloading
☒	Complete specialization
☐	Partial specialization
☐	General template

Question # 6 of 10 (**Start time: 12:58:17 PM, 07 July 2025**)

What is the purpose of a generic algorithm in C++?

Select the correct option

☒	To make algorithms independent of data structures
☐	To avoid the use of pointers
☐	To create run-time polymorphism
☐	To handle integer data only

Question # 4 of 10 (Start time: 12:54:08 PM, 07 July 2025)

Which one of the following is an example of complete specialization?

Select the correct option

☐	<code>template <class T> class Vector<T*> { }</code>
☒	<code>template<> class Vector <char*> { }</code>
☐	<code>template <typename T> class Vector { }</code>
☐	<code>template <typename T> class Vector<T*> { }</code>

Question # 9 of 10 (Start time: 12:55:37 PM, 07 July 2025)

What does a C++ template allow you to do?

Select the correct option

☒	Write functions or classes that can operate with different data types
☐	Define multiple main functions in a program
☐	Create new data types dynamically at runtime
☐	None of the given

Question # 8 of 10 (Start time: 12:55:17 PM, 07 July 2025)

Which of the following is the correct syntax to declare a vector of type int?

Select the correct option

☐	<code>vector {int} sampleVector;</code>
☒	<code>vector<int> sampleVector;</code>
☐	<code>int <vector> sampleVector;</code>
☐	<code>sampleVector vector<int> ;</code>

Question # 2 of 10 (**Start time: 12:57:18 PM, 07 July 2025**)

Which of the following is true about friend functions in template classes?

Select the correct option

☐	They can only access public members of the class.
☒	They can access private and protected members of the class.
☐	They must be defined inside the class.
☐	They are inherited by derived classes.
