CS521 ASSIGNMENT 1 SOLUTION FALL 2024

Objective:

To design and develop a simple multi-section website layout using HTML and CSS. This assignment will help you practice your skills in structuring a webpage and applying CSS for styling.

1. **HTML (index.html):**
    - Create a basic HTML structure with a <head> and <body>.
    - Add the following sections to the body:
        - **Header:** Include your website title and a navigation menu with links to the sections:
            - Home
            - About
            - Services
            - Contact
        - **About Section:** Write a brief introduction about yourself or your website.
        - **Services Section:** List at least three services you offer, including a brief description for each.
        - **Contact Section:** Create a simple contact form with fields for name, email, and message, and a submit button.
        - **Footer:** Include copyright information and links to social media.
2. **CSS (styles.css):**
    - Style the website to enhance its visual appeal. Consider the following:
        - Use a cohesive color scheme.
        - Style the header and navigation menu.
        - Add padding and margins to sections for spacing.
        - Use fonts that are easy to read and visually appealing.
        - Add hover effects to the navigation links.
3. **Layout:**
    - Use CSS Flexbox or Grid for layout management.
    - Ensure that the layout is responsive, meaning it should look good on both desktop and mobile devices.

- Ensure that each section is clearly defined, possibly using different background colors or images.

Additional Features (Optional):

- **Smooth Scrolling:** Implement smooth scrolling for navigation links.
- **Responsive Design:** Use media queries to adjust the layout on different screen sizes.
- **Custom Fonts:** Integrate a custom Google Font to enhance typography.
- **Image Integration:** Add relevant images or icons to the About and Services sections.

Solution

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
