

1. **Question:** A document describing the coding procedure and the location of data for variables in a format that computers can use is called:

- A) Codebook
- B) File
- C) Field
- D) Record
- **Correct Answer:** A) Codebook

2. **Question:** Which of the following is a non-probability sampling technique?

- A) Simple Random Sampling
- B) Systematic Sampling
- C) Stratified Sampling
- D) Convenience Sampling
- **Correct Answer:** D) Convenience Sampling

3. **Question:** Pre-testing of a questionnaire on a small-scale trial run is known as:

- A) Hypothesis testing
- B) Pilot testing
- C) Questionnaire testing
- D) Reliability testing
- **Correct Answer:** B) Pilot testing

4. **Question:** A set of rules stating that certain numbers are assigned to variable attributes is called:

- A) Coding procedure
- B) An observation unit
- C) Data clearing
- D) Data analysis
- **Correct Answer:** A) Coding procedure

5. **Question:** What sampling technique involves selecting additional participants based on referrals or recommendations from the initial participants?

- A) Double sampling
- B) Detailed sampling

- C) Proportionate stratified sampling
- D) Snowball sampling
- **Correct Answer:** D) Snowball sampling

6. **Question:** How many variables does a univariate variable describe?

- A) Two
- B) Three
- C) One
- D) Many
- **Correct Answer:** C) One

7. **Question:** Obtaining units or people who are most easily available comes under which type of sampling technique?

- A) Simple random sampling
- B) Cluster sampling
- C) Systematic sampling
- D) Convenience sampling
- **Correct Answer:** D) Convenience sampling

8. **Question:** Which of the following is NOT one of the principles for asking questions during the interview?

- A) Read each question very slowly
- B) Ask the question in the order in which they are presented in the questionnaire
- C) Repeat questions that are misunderstood or misinterpreted
- D) Always try to get all personal information from the interviewee
- **Correct Answer:** D) Always try to get all personal information from the interviewee

9. **Question:** Questions that put pressure on the respondent's memory are called:

- A) Loaded questions
- B) Leading questions
- C) Burdensome questions
- D) Biased questions
- **Correct Answer:** C) Burdensome questions

10. **Question:** In a contingency table, what does it indicate when most of the percentages lie along the diagonal cells?

- A) Linear relationship
- B) Curvilinear relationship
- C) Bell-shaped relationship
- D) Spurious relationship
- **Correct Answer:** A) Linear relationship

11. **Question:** Suppose a researcher studies the relationship between the cartoons published in Dawn and posted on Facebook during the years 2009-2011. Which type of research is it?

- A) Observation
- B) Ethnography
- C) Content analysis
- D) Historical research
- **Correct Answer:** D) Historical research

12. **Question:** The experimental design that uses one group, a pretest, and a posttest is called:

- A) One-group pretest posttest design

- B) Posttest only control group design
- C) One-shot case study
- D) Solomon four-group design
- **Correct Answer:** A) One-group pretest posttest design

13. **Question:** Which of the following is NOT a part of a table?

- A) Cell of a table
- B) Body of the table
- C) Column
- D) Vertical bar lines
- **Correct Answer:** D) Vertical bar lines

14. **Question:** Which of the following is NOT one of the measures of central tendency?

- A) Mean
- B) Median
- C) Mode
- D) Correlation
- **Correct Answer:** D) Correlation

15. **Question:** SANGL, an NGO, works on the issue of female illiteracy in rural areas of Khyber Pakhtunkhwa. In order to assess, which research method would be most appropriate?

- A) Field Research
- B) Survey
- C) Experimental Research
- D) Historical Research
- **Correct Answer:** C) Experimental Research

16. **Question:** In research, if the variable is readily observable and measurable, it is considered:

- A) Manifest
- B) Latent
- C) Obtrusive
- D) Limited
- **Correct Answer:** A) Manifest

17. **Question:** Which of the following BEST describes Experimental research?

- A) To describe trends in education
- B) Only in biological and physical sciences
- C) To establish a cause and effect relationship
- D) To describe some aspect of a certain variable
- **Correct Answer:** C) To establish a cause and effect relationship

18. **Question:** In a contingency table, what does it indicate when most of the percentages lie along the diagonal cells?

- A) Linear relationship
- B) Curvilinear relationship
- C) Bell-shaped relationship
- D) Spurious relationship
- **Correct Answer:** A) Linear relationship

19. **Question:** Which of the following is NOT an advantage of secondary data?

- A) Spontaneity
- B) Longitudinal analysis
- C) Low cost

- D) Selective survival
- **Correct Answer:** A) Spontaneity

20. **Question:** Which of the followings BEST describes the Experimental research?

- A) To describe trends in education
- B) Only in biological and physical sciences
- C) To establish a cause and effect relationship
- D) To describe some aspect of a certain variable
- **Correct Answer:** C) To establish a cause and effect relationship

21. **Question:** Which of the following is an example of secondary data analysis?

- A) Re-analysis of data to check for accuracy
- B) Re-analysis of data for issues of secondary importance
- C) Re-analysis of data that others have collected
- D) All of the given options
- **Correct Answer:** D) All of the given options

22. **Question:** Which of the following is NOT an example of historical comparative research?

- A) Economic Forms
- B) Developmental processes
- C) Google Forms
- D) None of the given options
- **Correct Answer:** C) Google Forms

23. **Question:** In which of the following, open-ended questions are common, and probes are frequent?

- A) Survey Interview
- B) Field Interview
- C) Observations
- D) None of the given options
- **Correct Answer:** B) Field Interview

24. **Question:** What is a numerical value that is gained from measuring all the units in a survey sample?

- A) Statistic
- B) Parameter

- C) Observation unit
- D) Population
- **Correct Answer:** A) Statistic

25. **Question:** Scales and indexes help in condensing and simplifying the information, which is known as:

- A) Data analysis
- B) Data scoring
- C) Data reduction
- D) Data accuracy
- **Correct Answer:** C) Data reduction

26. **Question:** Which of the following is an Ethical Dilemma of Field Research?

- A) Deception
- B) Confidentiality
- C) Involvement of vulnerable
- D) All of the given options
- **Correct Answer:** D) All of the given options

27. **Question:** What is an example of a true experimental design?

- A) Two groups posttest-only design
- B) One-shot case study design
- C) One-group pretest posttest design
- D) Pretest posttest experimental and control group design
- **Correct Answer:** D) Pretest posttest experimental and control group design

28. **Question:** When you are confident that experimental manipulation produces changes in the dependent variable, your study probably has good:

- A) External validity
- B) Causal validity
- C) Construct validity
- D) Internal validity
- **Correct Answer:** D) Internal validity

29. **Question:** A researcher can control experimentation by all of the given controlling techniques EXCEPT:

- A) Manipulation of the independent variable

- B) Holding conditions constant
- C) Control over the composition of groups
- D) Control over reactions of subjects
- **Correct Answer:** D) Control over reactions of subjects

30. **Question:** Which of the following is NOT an example of historical comparative research?

- A) Broad historical processes
- B) Comparing forms
- C) Tracing the development of social forms
- D) All of the given options
- **Correct Answer:** D) All of the given options

31. **Question:** The type of sampling technique in which every member has an equal chance of selection in a study is known as:

A) Cluster sampling

B) Convenience sampling

C) Quota sampling

D) Simple random sampling

Correct Answer: D) Simple random sampling

SUBJECTIVE PART

Question No: 33 of 39

Marks: 3 (Budgeted Time Min)

In order to conduct a field research, researchers usually adopt a certain social role.

Why is it recommended to adopt a social role?

Answer::

Adopting a social role in field research helps researchers establish rapport with participants, gaining access to authentic information. This approach fosters trust, enhances observational opportunities, and ensures a more nuanced understanding of the studied community or environment.

Question No: 38 of 39

Marks: 5 (Budgeted Time Min)

The ability to probe with neutral stimuli is the mark of an experienced interviewer.

Explain a few possible tactics that can be used for probing.

Answer:

Experienced interviewers employ various probing tactics to extract detailed responses without bias. These include:

1. **Silence and Pauses:** Allowing silence encourages participants to elaborate.
2. **Open-ended Questions:** Phrasing questions broadly encourages participants to share more.
3. **Reflective Listening:** Repeating or paraphrasing the participant's response encourages clarification.
4. **Non-Verbal Cues:** Expressions and body language can prompt participants to expand on their answers.

5. **Follow-up Questions:** Asking for additional details or examples helps delve deeper into the subject.

Question No: 39 of 39

Marks: 5

A researcher wants to study the impact of organizational culture on Enterprise Resource Planning (ERP) systems. Population for this study is employees working on ERP systems in Karachi based organizations. For this purpose, he decided to contact with the respondents by using chain referrals. Identify the type of sampling (Probability or Non-Probability) and sampling technique. Justify your choice.

Answer:

Type of Sampling: Non-Probability Sampling

Sampling Technique: Chain Referral Sampling

Justification:

In this scenario, the use of chain referral sampling indicates a non-probability sampling approach. This method relies on existing connections within the population, where participants refer the researcher to others. Non-probability sampling is suitable when a specific group (employees in Karachi-based organizations using ERP systems) is targeted, and the emphasis is on accessibility rather than random selection. Chain referral sampling allows for efficient access to this specific population through established professional networks, making it a practical choice for this study.

Question No: 37 of 39**Marks: 5 (Budgeted Time Min)**

A researcher wants to study the effect of temperature on the performance of workers. He increased the temperature slowly after every 30 minutes and noted the number of units workers produced during that time period by keeping other

variables constant. Identify treatment and dependent variable in the above-

mentioned experimental research. Provide an explanation.

Answer:

Treatment: Temperature

Dependent Variable: Number of units produced by workers

Explanation:

In this experimental research, the treatment is the manipulated factor, which is the temperature. The researcher is altering the temperature and observing its impact on the workers' performance. The dependent variable is the outcome being measured, which is the number of units produced by the workers. This variable is expected to change in response to variations in temperature, and it serves as the indicator of the effect of the treatment on the workers' productivity.

Question No: 35 of 39

Marks: 3 (Budgeted Time Min)

One of the commonly used probability sampling techniques is stratified random sampling. In what situations, is this technique preferred over other probability sampling techniques?

Answer:

Stratified random sampling is preferred over other probability sampling techniques in situations where:

1. **Heterogeneous Population:** When the population exhibits significant internal variability, stratified random sampling ensures representation from different strata, providing a more accurate reflection of the overall diversity.
2. **Desire for Precision:** If there is a need for increased precision in estimating characteristics within specific subgroups of the population, stratified random sampling allows for separate analysis and more precise results.

3. **Improved Comparisons:** When researchers aim to compare characteristics among distinct subgroups within the population, using this technique allows for more meaningful and targeted comparisons between strata.

Question No: 34 of 39

Marks: 3 (Budgeted Time Min)

A researcher conducted an experimental study in which he selected two groups.

He provided a workshop to the experimental group while the control was not

provided with any workshop. However, he got filled a questionnaire from subjects

of two groups after the workshop. What type of experimental design did the

researcher use? Provide justification.

Answer:

Experimental Design: Pretest-Posttest Design

Justification:

The researcher utilized a pretest-posttest design by collecting questionnaire responses from both the experimental and control groups after the workshop. The initial questionnaire (pretest) serves as a baseline measurement, allowing the researcher to assess any changes caused by the workshop intervention. The absence of a workshop for the control group helps establish a comparison for evaluating the impact of the workshop on the experimental group, making this a pretest-posttest experimental design.

Question No:36 of 39

Marks: 5 (Budgeted Time Min)

Researchers who conduct research on deviants, engaged in illegal behavior face an additional dilemma. Mention the dilemma for the field researcher?

Answer:

The ethical dilemma for field researchers studying individuals engaged in illegal

behavior lies in the tension between maintaining confidentiality and reporting criminal activities. Balancing the need to protect participants' identities while also acknowledging the responsibility to address illegal actions can pose significant challenges. Researchers must navigate this delicate balance to uphold ethical standards and ensure the welfare of both participants and society.
