BT101 QUIZ-1 SOLVED 14-08-2020

SOJHLA FATIMA

1. Which of the following are also called blue green algae. Cynobacteria
2. Which of the following bacteria fix atmosphere nitrogen on anaerobic conditions. Cynobacteria
3. Which of the following type of bacteria cause Syphilis and Lyme disease. Spirochetes
4. Many bioactive metabolites are produced by ------ species. Streptomyces
5. In ---- wings have been modified for hovering. Humming bird
6. In ----- legs have been modified for swimming. Penguin
7. Legs have been modified for perching in ----. Sparrow
8. Wings of the birds have not been modified for----. Walking
9. In ---- legs have modified for wading. Stork
10. Wings have been modified for soaring in ------. Eagles
11. Which of the following is a highly conserved structure in birds. Feathers
12. ----- selection characterizes the periods of stasis. Stabilizing
13. Halophiles can live in water with salt concentration exceeding----. 15
14. Which of the following is uncommon in animals. Sympatric speciation
15. Cladogram depict a sequence in the ------ of derived characters. Origin
16. Evolutionary changes whether over long period or rapid are result of changes in ---- make up. Genetics
17. Between 30% to 50% of ------- species are formed by sympatric speciation. Angiosperms
18. Thermoacidophiles lives in the environment with ----- pH. 1 to 3
19. Short protein appendages smaller than flagella is called ----. Pilli
20. Bacteria use ----- in conjugation for exchange of genetic material. Pilli
21. The salt concentration in oceans in roughly. 4%
22. Thermoacidophiles live in superheated water with temperature. 750F

23. **Cytochrome C is a protein present in the cellular respiration pathways in ---- group. All Eukaryotes**
24. **If the reproductive isolation is due to reproducing of different times it is -----. Temporal isolation**
25. **Which of the following protein are useful for looking at relationship among more closely related animals. Less conserved**
26. **Evolution of 14 species of finches from the original seed eater finches from mainland is the example of ----- speciation. Allopatric**
27. **---- occurs in small local population called demes which are not completely isolated from each other. Parapatric**
28. **In ------- isolation courtship behavior patterns of two animals are inappropriate for each other. Mechanical**
29. **Condition in the reproductive ------ of a female may not support the sperm of male. Tract**
30. **The theory of ------ states that evolution occurs primarily through shorts burts of intense speciation. Phylectic gradualism**
31. **Which of the following of bacteria have tuft of flagella at in end. Lophotrichous**
32. **Which of the following bacteria have a single flagellum at both ends. Amphitricous**
33. **According to the---- concepts evolutionary changes are occurring gradually over millions of years. Phyletic gradualism**
34. **Which of the following protein is present in the cellular respiration pathways in all eukaryotic organisms. Cytochrome C**
35. **New genetic material is generated during ---- evolution. Molecular evolution**
36. **Photosynthezing bacteria that are related to the chloroplasts of eukaryotic plants and algae are called. Blue green algae**
37. **Approximately ---- tons of sodium chloride is extracted from the Great salt lake. 2.5 million**
38. **Non disjunction at a single chromosome results in an abnormal number of chromosome. Aneuploidy**

39. **Halophiles cave live in water with salt concentration exceeding. 15%**
40. **Parapatric speciation occurs in small local population called ---. Demes**
41. **This speciation occurs with a single population. Sympatric**
42. **According to endosymbiotic theory evolved from endocytosis of anerobic bacteria. Mitochondria**
43. **According to ---- model of evolution species do not change significantly over million of years. Punctuated equilibrium**
44. **Members of the domain ---- live in extreme environments. Archaea**
45. **A diagram showing a hypothetical lineage is called a ----. Cladogram**
46. **Numbers of pilli in bacteria cell ----. 1-10**
47. **Successful fertilization and development do not occur in -----. Post mating isolation**
48. **Development failures of the fertilized egg or embryo are the kind of ------ isolation. Post mating isolation**
49. **In ----- isolation geographical barriers prevents mating of individuals. Pre mating isolation**
50. **If a species population becomes separated by a geographic barrier it is ----. Allopatric speciation**
51. **Members of the ---- group can be traced to separate ancestors. Polyphyletic**
52. **The group should include a single ancestral species and all of its descendents. Monophyletic**
53. **Cell wall of bacteria consists of ------. Peptidoglycan**
54. **Kingdom protista consist of ------. Unicellular eukaryotes**
55. **Actinobacteria are ------ bacteria. Gram positive**
56. **Which of the following organisms have cells consisting of a nucleus within the membranes. Eukaryote**
57. **Who developed the three and five kingdom system. Robert whittakar**
58. **Who is the father of taxonomy and systematic. Carl Linnaeus**
59. **If the reproductive isolation occur due to reproducing at different times it is ------. temporal isolation**

60. **Which of the following organisms have cell consisting of a nucleus enclosed within membranes.** **Eukaryotes**

61. **Characters that all members of a group share are reffered to as ---.** **Symplesiomorphies**
