AN.K Compilation(EDU431)

EDU 431 MID term 2022

1- define assessment (2)
It means appraisal of something to improve quality of teaching and learning process for deciding What more can be done to improve the teaching, learning and outcomes.
4- write stages of educational (3) decision
In general, three areas of decision-making can be school based: **budget, personnel, and curriculum**.
5- write 3 points of self assessment (3)
Be honest and critical.
Track your accomplishments.
Be professional.
Difference of summative and formative assessment.

The purpose of formative assessment is to monitor student learning and provide ongoing feedback to staff and students. The goal of summative assessment is to evaluate student learning at the end of an instructional unit by comparing it against some standard or benchmark

Define standard from national curriculum

These define the competency by specifying broadly, the knowledge, skills and attitudes that Students will acquire, should know and be able to do in a particular key learning area during Twelve years of schooling.

Weaknesses of portfolios 3 marks repeated

1) Can be time consuming to assemble.

2) Hard to use in summative assessment.

3) Difficult to compare results.

4) Very low reliability.

Level of cognitive domain

Old Cognitive Domain

Knowledge: It is defined as the remembering of previously learned material. This may involve the recall of a Wide range of facts, procedures principals and generals, the recall of procedures and the Processes. **Sample Question:** Define the 6 levels of Bloom's taxonomy of the cognitive domain.

Comprehension:

It is defined as the ability to grasp the meaning of the material. individual can make use of the content or idea being communicated without necessarily related it to other content and seeing its fullest implications. Sample Question: explain the purpose of Bloom's taxonomy of the cognitive domain.

Application:

AN.K COMPILATION

It refers to the ability to use the previously learned material in new and concrete situations. The abstractions may be in the shape of universal ideas, rules of methods. Sample Question: write an instructional objective for each level of Bloom's taxonomy.

Types of test.

Types of Written Tests

Verbal

Non-verbal

Objective

Subjective

Teacher Made

Standardized

Power

Speed

Merits/STRENGTH of portfolios... 5 marks REPEAT

1) The can be readily integrated with the instruction.

2) Provide opportunity to student‘s to show what they can do.

3) Encourage to become reflective learner.

4) Help in setting goal and self-evaluation

5) Effective way to communicate with parents.

Criterion referenced assessment... 5 marks REPEATED

A second type of test tells us about student‘s level of proficiency in or mastery of some skill or Set of skills. This is achieved by comparing a student‘s performance to a standard mastery called A criterion. Test that yields such information is called Criterion Referenced Test.

Dimensions

1) CRT tends to be specific. It measures particular set of skill at one time and focus on level of achievement of that skill. CRT gives clear picture regarding the mastery of student‘s skill in subject.

2) It measures skill more thoroughly so naturally it takes more time comparing to NRT in measuring the mastery of said skill

Face content construct validity ...3 marks repeated

Face content considers how suitable the content of a test seems to be on the surface.

AN.K Compilation(EDU431)

Construct validity is the accumulation of evidence to support the interpretation of what a measure reflects. Modern validity theory defines construct validity as the overarching concern of validity research, subsuming all other types of validity evidence such as content validity and criterion validity

Fixed choice assessment with example repeat

Fixed Choice Assessment

Fixed Choice Assessment is sued to measure the skills of people efficiently (means measure more skills in less time) and for this we usually use fixed choice items i.e. Multiple choice question, matching exercise, fill in the blanks and true false. It is called fixed choice because the person who is attempting the paper does not need to write the answer, just need to choice the answer. From these, we can assess student abilities of lower level learning

Performance base assessment with example ..3 it's not in handouts

In general, a performance-based assessment measures students' ability to apply the skills and knowledge learned from a unit or units of study. **Examples** of performance assessments include composing a few sentences in an open-ended short response.

comprehension, application levels..3 marks **about application level am not found any Q**

Comprehension:

It is defined as the ability to grasp the meaning of the material. individual can make use of the content or idea being communicated without necessarily related it to other content and seeing its fullest implications. Sample Question: explain the purpose of Bloom's taxonomy of the cognitive domain.

Define reliability...2 marks

Reliability refers to the consistency of assessment results.

Four sources for developing objectives...2 marks

Sources for lists of Objectives

- Professional Associations standards
- State Content Standards
  Methods books
  Year books

AN.K Compilation(EDU431)

Effective domains level

The Taxonomy of the Affective Domain contains five levels, from lowest to highest: receiving, responding, valuing, organization, and characterization

What do you means by unreliable results

not reliable; not to be relied or depended on.

Fixed choice assessment and complex choice assessment REPEAT 3 marks

i. Fixed Choice Assessment

Fixed Choice Assessment is sued to measure the skills of people efficiently (means measure more skills in less time) and for this we usually use fixed choice items i.e. Multiple choice question, matching exercise, fill in the blanks and true false. It is called fixed choice because the person who is attempting the paper does not need to write the answer, just need to choice the answer. From these, we can assess student abilities of lower level learning

Fixed Choice Assessment is used for efficient measurement of knowledge and skills. This type of assessment includes standardized multiple choice questions

ii. Complex Performance Assessment

Complex Performance assessment is used for measurement of performance in contexts and the problems valued in their own right. This includes hands on laboratory experiments, projects, essays, oral presentations. E.g. if want to measure the student ability of writing an essay and this cannot be judged by fixed response items

5 steps of portfolios 5 marks

Key steps in defining and using portfolios

1) Specify purpose.

2) Provide guidelines for selecting portfolios.

3) Define student‘s role in selection and self-evaluation.

4) Specify evaluation criteria.

5) Use portfolios in instruction and communication.

Table of specification and steps or ways of it explain 5 marks

Table of specification (repeated)

One of the tools used by teachers to develop a blueprint for the test is called —Table of

AN.K Compilation(EDU431)

Specification in other words Table of Specification is a technical name for the blue print of test. It is the first formal step to develop a test.

Two way Table of Specification

A Table of Specifications consists of a two-way chart or grid relating instructional objectives to

the instructional content.

Table of specification performs two important functions

1. Ensures the balance and proper emphasis across all content areas covered by teacher

2. It ensures the inclusion of items at each level of the cognitive domain of Bloom's Taxonomy.

Formula table of specification 3 marks

$$\text{Percentage of instruction time} = \frac{\textit{time spent onobjective,content,theme (min)}}{\textit{Total time fo rthe instruction being examined (min)}}$$

$$\text{Percentage of instruction time} = \frac{250}{1000}$$

Percentage of instruction time = 25%

Five types of formative assessment

Types of Formative Assessment

1) Observations during in-class activities; of student's non-verbal feedback during lecture.

2) Homework exercises as review for exams and class discussions)

3) Reflections journals that are reviewed periodically during the semester

4) Question and answer sessions, both formal (planned) and informal (spontaneous)

5) Conferences between the instructor and student at various points in the semester

6) In-class activities where students informally present their results

What is the self-assessment?

Self-assessment: Self-assessment is a process of formative assessment during which students

reflect on and evaluate the quality of their work and their learning, judge the

1. Explain standards of students learning according to national curriculum? 2 marks

In national curriculums of Pakistan, learning of student is classified into four levels.

1) Competency

AN.K COMPILATION

2) Standards

3) Benchmarks

4) Student learning outcome (SLOs)

2.what is Anecdotal record? 2 marks

Many outcomes in the cognitive domain, such as those pertaining to knowledge, understanding, and thinking skills, can be measured by paper pencil tests. But there are still many learning outcomes that require informal observation of natural interactions.

3. Explain the formula of instruction of measurement in mints? 2 marks like that question

Face content construct validity ...3 marks repeated many times

There are four main types of validity: Construct validity: Does the test measure the concept that it's intended to measure? Content validity: Is the test fully representative of what it aims to measure? Face validity: Does the content of the test appear to be suitable to its aims?

Define measurement 2

Measurement is the process by which the attributes or dimensions of some object (both physical and abstract) are quantified. The tools used for this purpose may include test, observation, checklist, homework, portfolios, project etc. (the process of changing the person's ability into numbers is measurement).

norm reference assessment (5)

Norm-referenced Assessment Norm-referenced Assessment measures the students‘ performance according to relative position in some known group. E.g. ranks tenth in classroom group of 50 or top 5 students in a class. Relative position means a point defined with reference to another position (where a student stands compared to other students) Rather than reporting student‘s achievement it reports students standing among other students. NRT is utilized to discriminate between a certain groups of students. It‘s never used for certification or issuing grades to students. Position of the student is generally represented by percentile scarce noting the percentage of students achieving same or low scarce in the test. Examples of NRT are NTS or CSS exams. E.g. if you achieved 97% percentile on NTS test, it Means there are 96% who scored lower then you.

Summative assessment

Summative assessment takes place after the learning has been completed and provides information and feedback that sums up the teaching and learning process. Typically, no more formal learning is taking place at this stage, other than incidental learning which might take place through the completion of projects and assignments**.**

Methods to estimate reliability repeated

AN.K Compilation(EDU431)

Method to Estimate Reliability

Test-Retest (stability)

Equivalent Forms (equivalence)

Test- Retest with Equivalent Forms (stability and equivalence)

Split Half (Internal Consistency)

Kuder- Richardson(Internal Consistency)

Cronbach Alpha (Internal Consistency)

Inter-rater Reliability (consistency of rating)

7- what is reliability? Types of reliability (5)

Reliability refers to the consistency of assessment results. There are two types of reliability – **internal and external reliability**. Internal reliability assesses the consistency of results across items within a test. External reliability refers to the extent to which a measure varies from one use to another.

unreliable test

In an unreliable test, **students' scores consist largely of measurement error**. An unreliable test offers no advantage over randomly assigning test scores to students. Therefore, it is desirable to use tests with good measures of reliability, so as to ensure that the test scores reflect more than just random error.

assessments recommended in curriculum

The two forms of assessment recommended are:

periodic/formative assessment through homework, quizzes, class tests and group discussions.

end of term/ summative assessment through final examination.

Depth of Knowledge (DOK)

DOK (Depth of Knowledge) was presented by Webb in 1997, giving four levels of learning

Activities nature of reliability

Standard for appropriate test

Standards for selecting appropriate test

Test users should select tests that meet the purpose for which they are to be used and that are

appropriate for intended population.

1) First define the purpose for testing and the population to be tested and select the test accordingly.

2) Investigate the potentially useful sources of information, in addition to the test scores, to validate the information provided by tests.

AN.K COMPILATION

3) Read the materials provided by test developers and avoid using tests for which unclear or incomplete information is provided.

4) Become familiar with how and when test was developed and tried out.restricted response essay type question.

Diagnostic assessment .3 marks

A diagnostic assessment is a form of pre-assessment where teachers can evaluate students' strengths, weaknesses, knowledge and skills before their instruction. … A diagnostic assessment refers to an assignment written at the beginning and end of a course.

what is anedotal record

Anedoctol record is the observation by teacher. It is not directly related with academic. It is the judgement of behavior. It should b based on evidence.

Restricted easy type question

1. Statements should not be quoted directly from the text.

2. Evaluate essay responses anonymously.

3. Frame questions so that the examinee's task is explicitly defined.

4. Specify the value and an approximate time limit for each question.

5. Employ a larger number of questions that require relatively short answers rather than only

a few questions that require long answers.

6. Do not employ optional questions.

Explain the principle of sociometric techniques of peer appraisal

There are few important principles of sociometric choosing:

1) The choices should be real choices that are the natural part of classroom activities.
2) The basis for the choice and restriction on the choosing should be made clear.
3) All students should be equally free to participate in the activity or situation.
4) The choice of each student make must be kept confidential.
5) The choices should actually be used to organize or rearrange the group.

Reliability value

The values for reliability coefficients range **from 0 to 1.0**. A coefficient of 0 means no reliability and 1.0 means perfect reliability. Since all tests have some error, reliability coefficients never reach 1.0.

Unreliability define with example

Not reliable; not to be relied or depended on.

AN.K Compilation(EDU431)

People can be unreliable because **they're dishonest**, always late, bad at their job, or just inconsistent. Things can be unreliable because they're broken or old. A train schedule can be unreliable if the trains are never on time.

Define peer appraisal method.

In this procedure students rate their peers on the same rating device used by their teacher.

It depends on greatly simplified procedures.

Techniques

1) Guess who technique
2) Sociometric technique

Maximum and typical performance assessment

Maximum Performance Assessment

Maximum performance assessment determines what individual can do when performing at their best. E.g. assess student in an environment when they exhibit their best performance. Procedure of this type is concerned with how well individual perform when they are motivated to obtain as high score as possible. This type of assessment includes Aptitude tests and Achievement tests.

Typical Performance Assessment

The second category is typical performance assessment determines what individual will do under natural conditions. This type of assessment includes attitude, Interest and personality inventories, observational techniques, peer appraisal. Here emphasis is on what students will do rather than what they can do.

Psychomotor Domain

1) Perception

2) Set

3) Guided Response

4) Mechanism

5) Complex covert Response

6) Adaption 7) Origination

AN.K COMPILATION
