EDU431_Quizzes_Notes

1. How many major types of items are there?
   - 4
   - 2
   - 1
   - 3
2. Which of the following type of test item is best to measure higher order thinking skills of the students?
   - Subjective
   - True/False
   - Completion
   - Objective
3. Which of the following theory focuses on finding the true score of an individual on a test?
   - Psychometric
   - Generalizability
   - Item response
   - Classical test
4. Which one is NOT true for rubrics?
   - Scoring guide
   - Criteria
   - Grading scheme
   - Evaluation Sheet
5. Which one of the following is the first step to design the rubric?
   - Choose outcomes that may be measured.
   - Share it with students.
   - Develop or adapt existing rubric.
   - Identify a learning goal.
6. Which one of the following can be defined as a system of numbers or values assigned to a work often combines with a level of performance?
   - Descriptors
   - Criteria
   - Level of performance
   - Score

EDU431 Quiz 3 File by Tanveer Online Academy

Which value indicates that a test item is very difficult?	**0.3**
This is because difficulty indices range from 0 to 1, where lower values indicate more difficult items. A value of 0.3 means that only 30% of the students answered the item correctly, making it a challenging question.	
Which item discrimination value shows that an item is acceptable?	**0.35**
Discrimination indices range from -1 to +1, where higher positive values indicate better discrimination. Generally: 0.30 or above is considered acceptable or good. Below 0.20 often indicates poor discrimination and may need revision. Thus, 0.35 is in the acceptable range.	
Identify the good item from given values of item discrimination.	**0.41**
The good item is the one with the highest discrimination value, as higher values indicate better discrimination between high and low performers. The correct option is 0.41, which represents a good discrimination value.	
Which objective is served by evaluating the values of item discrimination to identify a suitable test item?	**0.48**
The question seems to be about identifying the objective served by evaluating item discrimination values, not selecting a numerical value. Evaluating item discrimination helps in identifying test items that effectively distinguish between high and low-performing students. If you're asking for the best discrimination value in this context, the suitable test item would be the one with the highest discrimination value, which in the given options is 0.48.	
What does "norm-referenced interpretation" refer to?	**Comparison to a group**
Which aspect is the main focus of item analysis?	**Item performance**
Which value represents the item difficulty for the easiest test item?	**0.9**
Item difficulty is measured on a scale from 0 to 1, where higher values indicate easier items. A value of 0.9 means that 90% of test-takers answered the item correctly, making it the easiest item among the given options.	
Discrimination power of an item is acceptable when its value ranges from?	**0.2-1.00**

Discrimination power is considered acceptable if the value is 0.2 or higher. Values closer to 1 indicate excellent discrimination, meaning the item effectively differentiates between high-performing and low-performing test-takers. Items with values below 0.2 may need to be revised or discarded.	
Identify the excellent item from given values of item discrimination.	**0.50**
An excellent item typically has an item discrimination value of 0.40 or above, which indicates strong differentiation between high-performing and low-performing test-takers.	
Identify the value of item difficulty for most difficult test item.	**0.0**
The value of item difficulty for the most difficult test item is 0.0, as per the explanation provided in Classical Test Theory (CTT) where item difficulty is expressed as the proportion of examinees who respond correctly to an item. The closer the value is to 0.0, the more difficult the item.	
Identify the value of item difficulty for most difficult test item.	**0.1**
The value of item difficulty for the most difficult test item is 0.1, as it indicates that only 10% of examinees answered the item correctly, making it highly difficult.	
Identify the value of item difficulty for easiest test item.	**0.9**
The value of item difficulty for the easiest test item is 0.9, as it indicates that 90% of examinees answer the item correctly, making it the easiest	
Identify the value of item difficulty for easiest test item.	**0.8**
The value of item difficulty for the easiest test item is 0.8, as it indicates that 90% of examinees answer the item correctly, making it the easiest	
Scoring is a time consuming process in marking of:	**Essay type answers**
Which of the following values indicates a poor item in terms of discrimination?	**0.17**
To determine which value indicates a poor item in terms of discrimination, the discrimination index typically ranges from -1 to +1, where: • A value closer to +1 indicates a good item, meaning it effectively differentiates between high and low performers. • A value closer to 0 or negative indicates a poor item, as it fails to discriminate effectively. From the options provided: • 0.48, 0.26, and 0.35 indicate moderate to good discrimination. • 0.17 indicates poor discrimination. Thus, the correct answer is 0.17.	
Which value represents the item difficulty for the most difficult test item?	**0.2**
The item difficulty index ranges from 0 to 1, where: • A value closer to 0 indicates a very difficult item. • A value closer to 1 indicates an easier item. Thus, the most difficult test item would have an item difficulty value closest to 0.2. The correct answer is 0.2.	
Which aim is achieved by assessing the value of item discrimination to	**0.48**

determine the outstanding item? The aim of assessing item discrimination is to identify items that effectively differentiate between high and low achievers. A higher discrimination value indicates a more effective item. From the options provided: 0.48 represents the highest discrimination value, making it the most outstanding item. Thus, the correct answer is 0.48.	
Which aim is achieved by assessing the value of item discrimination to determine the outstanding item? To determine the outstanding item using item discrimination, you assess how well an item differentiates between high-ability and low-ability test-takers. The ideal item discrimination value typically exceeds 0.4, signifying excellent discrimination. Acceptable discrimination levels start from 0.2, with values from 0.3 to 0.39 considered good. Among the options provided, 0.48 is the most likely to represent an outstanding item because it exceeds the threshold for excellent discrimination	**048**
Which term refers to providing an answer or forming a judgment about something without complete certainty about all the facts?	**Guess**
Teachers can evaluate the effectiveness of each test item by analyzing factors such as item difficulty and discrimination.	**True**
Which contexts allow for the quantification or assessment of the guessing parameter?	**IRT**
Which part of test administration is important for the physical and mental comfort of test takers?	**Setting**
Which aspect among the following is typically not regarded as a concern in test administration?	**Inefficiency of teachers**
Identify the value of item difficulty for easiest test item.	**0.9**
Test item is very difficult when value of difficulty level is less than?	**0.3**
Identify the value of item difficulty for most difficult test item.	**0.3**
Discrimination power of an item is acceptable when its value ranges from?	**0.2-1.00**
A steeper item characteristics curve shows that item is _____.	**Good Discriminator**
The supply type test item is?	**Fill in the blanks**
The problem stated in the form of question or incomplete statement in MCQs is called:	**Stem**
The incorrect option in MCQ are called	**Distractor**
Item analysis focuses to find out:	**All above**
A multiple choice question is composed of question referred as _____	**Stem**
Guessing is eliminated in:	**Essay type items**
Which of the following is best to measure higher order learning skills?	**Subjective**

	items
A list of three or more choices from which an examinee is required to choose the correct one is given in:	M.C.Q items
A steeper item characteristics curve shows that item is _____.	Good Discriminator
Which of the following types of items is not a selection item	Short answer
The collection of productive work called to evaluate the performance of students is called:	Portfolio
The correct option in MCQ is called	Answer
Identify the value of item difficulty for most difficult test item.	0.3
The list of suggested solutions in MCQs in the form of word, symbol, phrase etc. are called:	Alternatives
A multiple choice question is composed of question or statement referred as:	Stem
Under Item Response Theory, the difficulty of an item describes where the item functions along the _____.	ability scale
A test very popular with class room teacher is_____.	Multiple choices test
In multiple choice items, the stem of the items should be_____.	Meaningful
Difficulty level of an item determines?	Ease or Difficulty
Identify the value of item difficulty for easiest test item.	0.8
Extended response items are helpful to determine:	Length and complexity of response
Objective type question have advantage over essay type because such questions are _____.	Easy to mark
Analytical rubric works best for:	Restricted response items
Identifying relationship between two things is done in_____.	Matching items
Discrimination power of an item is acceptable when its value ranges from?	0.2-1.00
Identify the good item from given values of item discrimination.	0.41
When the test is ready, the next step is to _____ it	Administer
How many columns matching items have _____?	Two
The pattern of students' errors and misconceptions start emerging after reading a few papers that help to develop scoring rubric for extended response items which will applied to score all papers. This type of scoring is called:	Analytic scoring
In which type of question marking will be more reliable_____.	Multiple choice questions
A flatter item characteristics curve shows that item is _____.	Poor
Good distractor is that:	Attracts low achievers more than high achievers
Identify the acceptable item from given values of item discrimination.	0.50
Identify the good item from given values of item discrimination.	0.48
A set of criteria and standard, educators can assess each student's performance on a wide variety of work.	Rubric

Following are the usefulness of completion questions EXCEPT:	**Student complete large number of items in short time.**
Identify the value of item difficulty for easiest test item.	**1.0**
Identify the value of item difficulty for easiest test item.	**.9**
The most commonly used guessing correction formula to predict and control is_____.	**S=R-W/N-1**
Identify the acceptable item from given values of item discrimination.	**.048**
When you are ready to package and reproduce the test _____.	**Objectives and test blue print**
Limited numbers of content area is needed to be tested in:	**Restricted response items**
Which of the following option includes in reproducing the test?	**Knowing the photocopying machine**
How many types of rubric are?	**Two**
"Types 40 words per minute without error" is an example of	**Criterion referenced interpretation**
The item in the column for which a match is sought is called _____.	**Premise**
MCQs can NOT be used to assess the knowledge of:	**Illusions**

Test item is very difficult when value of difficulty level is less than?

Select the correct option

0.6

0.3

0.8

0.7

Identify the poor item from given values of item discrimination.
Select the correct option

0.48

0.17

0.26

0.35

Identify the excellent item from given values of item discrimination.

Select the correct option

0.50

0.19

0.38

0.24

Identify the value of item difficulty for most difficult test item.

Select the correct option

0.3

1.0

0.5

0.7

Identify the value of item difficulty for most difficult test item.

Select the correct option

0.5

0.7

0.2

0.0

The degree of consistency with which an instrument measures the attributes, it is supposed to measure is called: Reliability

Which evidence of validity can be confirmed by factor analysis? Construct validity

Test retest is the method to estimate: Reliability

How well a test measures up to its claims, is known as: Construct validity

Which evidence of validity can be confirmed by correlation coefficient? Criterion validity

The quality of test to give same scores when administered at different occasions is called? Reliability

Reliability within an assessment itself is known as: Internal consistency

Kuder Richardson method is used to estimate? Reliability

The quality of test showing ease of time, cost, administration and interpretation is called? Usability

The degree to which a test measures an intended hypothetical construct is called: Construct Validity

Which of the following method is a measure of internal consistency? Split half

In reliability, consistency over period of time is known as: Stability

Which of the following method is a measure of stability? Test-retest

Which type of reliability refers to the consistency of scores on two equivalent forms of a test designed to measure the same characteristics? Test-retest

Reliability over different forms of assessment is known as: Equivalence

The spearman-Brown formula is used to estimate: Split-half

Which type of validity involves testing a group of subjects for a certain construct, and then comparing them with results obtained at some point in the future? Predictive validity

How well the sample of assessment tasks represents the domain of the tasks to be measured, is known as: Content validity

The degree to which an instrument measures what it is supposed to be measured is called: Validity

The degree to which a test measures an intended content area is called: Construct Validity

The test method to compare the performance of students with other students is called:	**criterion-referenced**
To put ideas together to form a new whole is called:	**Synthesis**
In a classroom, what is hoped to be attained through instruction?	**Objectives**

Explain the process of water cycle is the question of _____level in Blooms taxonomy of cognitive domain. Comprehension

Identify the highest learning level of Solo taxonomy. Pre-structural

Measure of performance which interprets an individual's relative standing in some known group is: Norm referenced

Which of the following type of assessment comes under the category of use in classroom instruction? Placement

The scores of students in paper are: Assessment

Which of the following is limited to quantitative description of pupil's performance is? Measurement

Cognitive domain was divided by Bloom in: 6

Identify the highest learning level of DOK taxonomy. Recall

The classification of cognitive domain was presented by: Benjamin S. Bloom

Tanveer Online Academy

Which of the following are three domains of Blooms' taxonomy? Cognitive, affective, psychomotor

How many domains of learning are there in Bloom's taxonomy? Three

When two or more scorers can easily agree on whether the answer is correct or incorrect is called: Objectivity

Monitoring the outcomes with reference to the objectives is called: Evaluation

In SOLO taxonomy; analyze, relate, apply are key words for learning level: Relational

In what kind of assessment, permanent difficulties in learning are investigated? Diagnostic

Identify the lowest learning level of Bloom's cognitive domain: Knowledge

The cognitive level where components of a whole are broken into parts to know it's organizational structure is called: Synthesis

Identify the learning level in national curriculum that specifies the skills and attitudes that students will acquire. Standards

A student is asked to critique a painting based on explicit criteria. What is the cognitive level of this outcome according to Bloom's taxonomy? Evaluation

Observation in a classroom is an example of which of the following type of assessment: Formative

In revised Bloom taxonomy; classify, compare, contrast are key words for level: Understanding

The purpose of formative evaluation is: monitoring progress of students

_____determines learning progress, provide feedback to reinforce learning, and correct learning errors formative assessment

To put ideas together to form a new whole is called: Synthesis

Out of the following four terms, which is vast in scope? **Evaluation**

Identify the learning level in national curriculum that specifies the skills and attitudes that students will acquire. Standards

Parveen Online Academy

Projects, oral presentations, laboratory experiments, and essays are examples of which type of assessment?

Complex performance

Identify the learning level according to national curriculum that describes what students will accomplish at the end of each grade. Student learning outcomes

Identify the highest learning level of Bloom's cognitive domain. Evaluation

Cognitive domain was divided by Bloom in:

6

Achievement tests and aptitude tests are example of: Maximum performance assessment

When viewing instructional objectives in terms of learning outcomes, we are concerned with: Product

Final term examination is an example of which of the following type of assessment: Summative

If you achieved 97% percentile on a test, then your result has been assessed according to: Norm

____is used when we want to assess the student's prior knowledge: placement assessment

Persistent difficulties in learning are investigated in: diagnostic assessment

Assessment that monitors learning progress is the formative assessment

"What is your name?" Is example of which level of solo taxonomy pre structural

In norm referenced test the comparison is between individuals

Who was the founder of Pakistan is the question of ____in bloom's taxonomy of cognitive domain? knowledge

student's performance is compared with other students in: norm-referenced test

Explain the process of water cycle is Question of ____level in bloom's taxonomy of cognitive domain Comprehension

Persistent difficulties in learning are investigated in: diagnostic assessment

Tanveer Online Academy

Measurement and evaluation can be used to: assess the effectiveness of learning activities

Procedure used to determine person best abilities are: maximum performance test

Assessment that monitors learning progress is: formative assistant

Curriculum wing also known as: national bureau of Curriculum

Frequently used tools of summative evaluation: test

Multiple choice question, matching exercise, fill in the blanks and true false is example of fixed choice question

The purpose of evaluation is to make judgement about: Quality

____is used when we want to assess student's prior knowledge: Placement assessment

Assessment that monitors learning progress is: formative assessment

Who was the founder of Pakistan is a question of ____in bloom's taxonomy of cognitive domain: knowledge

The purpose of measurement in education is to ____. Collect information for decision making

The test method to compare the performance of students with other students: norm referenced test

Purpose of formative evaluation is ___. Monitoring students' progress

procedure used to determine person best abilities are maximum performance test

The purpose of evaluation is to make Judgement

Feature, trait or dimension to be measured is decided in the _____element of rubric. Criteria

In which type of question marking will be more reliable _____. Multiple Choice Question

A test very popular with classroom teacher is _____Multiple Choice Question

The domain which deals with physical abilities and coordination objectives is: Psychomotor

Which of the following type of test emphasized on reading and speaking? Verbal

The assessment determines what individual can do when performing at their best is called: Maximum Performance Assessment

Test designed to measure broad national objectives and have a uniform set of instructions that are adhered to during each administration. Standardized

Tanveer Online Academy

Which of the following is not a basic step to design rubric answer choose outcomes that may be measured

to give an answer or make a judgement about something without being sure of all the facts is called answer guess

Difficulty level of an item determines answer discrimination power

Identify the acceptable item from given values of item discrimination: 0.26

Identify the value of item difficulty for most 1.0

A teacher wishes to assess students prior to instruction to measure their current level of skills. What kind of assessment is this teacher using? Placement

To judge the worth or value of material for a given purpose is known as: Evaluation

Identify the lowest learning level of DOK taxonomy. Extended Thinking

Identify the poor item from given values of item discrimination .17

Holistic rubric are good for evaluating answer overall performance on a task

MCQs cannot be used to assess the knowledge of illusion

To assess achievement at the end of instruction is answers summative assessment

Following are usefullNess of completion questions except: easy to Mark

Which of the following decision determines prerequisite skills, degree of mastery of course goals and mode of learning? Placement Assessment

The process of obtaining a numerical description of the degree to which an individual processes particular characteristic is called: Placement Assessment

"What individual will do under natural conditions" is the: Typical Performance Assessment

Norm reference assessment and criterion reference assessment are classifications of assessment on the basis of: Method of interpreting results

The way of judging how well students are doing by looking at their work during educational process is called: Assessment

Tanveer Online Academy

Identify the learning level according to national curriculum that indicates what students will accomplish at the end of each of the five developmental levels in order to meet the standard. Benchmarks

Bring together scientific ideas to form a unique idea is called: Synthesis

In SOLO taxonomy; classify, list, combine are key words for learning level: Multi-Structural

The assessment determines what individual will do under natural conditions is termed as: Typical Performance Assessment

In DOK taxonomy; create, synthesize, reflect are key words for learning level: Extended Thinking

Ali's writing score placed near the bottom of the class. The interpretation of this statement is: Maximum assessment

Student creatively applies knowledge to construct an overall theory is called?

Which of the following is the type of assessment by the use of classroom instruction_____. placement

Measure of student's performance against a certain criteria is: Criterion-referenced Assessment

In revised Bloom taxonomy; define, name, select are key words for level: Remembering

List, enlist, name, define keywords are used in _____level of Depth of Knowledge. Recall

Reliability of a test is necessity but not sufficient condition for: Validity

If you have been declared as master of content in specific domain after a test, then your result has been assessed according to: Criterion-referenced Assessment

Student can design a laboratory according to certain specification in which category of objective? Synthesis

Tanveer Online Academy

EDU431 Quiz# 2 and Quiz 3

"Types 40 words per minute without error" is an example of: Classical test theory

Which of the following is helpful for more consistent scoring across students and grades? Analytic Rubric

Guessing parameter can be measured in: IRT

Zero in raw score indicates:

A tool used to interpret and grade students' work against criteria and standards. Rubric

Identify the excellent item from given values of item discrimination. 0.50

Identify the excellent item from given values of item discrimination. 0.48

Psychometric properties of items are measured for: High Stake test

Test item is very difficult when value of difficulty level is less than? 0.3

Which of the following term used to describe the performance levels in scoring rubric? Criteria

"Types 40 words per minute without error" is an example of Classical test theory

Identify the value of item difficulty for most difficult test item. 0.1

Identify the value of item difficulty for easiest test item. 0.9 or above

Identify the acceptable item from given values of item discrimination. 0.26 or 0.29

Which of the following is not a basic step to design rubric? Give hints to a student directly

Descriptors are _____. Details description for each level of performance

Extended response items are helpful to determine: Length and complexity of response

MCQs cannot be used to assess the knowledge of: Illusion

A system of number or values assigned to work is known as: Score

Item analysis focuses to find out?

A scoring tool that teachers use to assess student learning. test

A set of criteria that provides an interpretation of the stated objectives (performance, behavior, quality).

Which of the following are major threats to the validity of test score interpretations_____?

Which of the following is appropriate to measure student's abilities to synthesize when no definite answer can be pre-specified? Holistic Rubric

A set of criteria that provides an interpretation of the stated objectives (performance, behavior, quality).

Tanveer Online Academy

When you are ready to package and reproduce the test _____. Objectives and test blueprint

Multiple test forms should be assembled so that _____. Students don't cheat

Test item cannot discriminate low achievers and high achievers when its value is lower than? 0.3

The pattern of students' errors and misconceptions start emerging after reading a few papers that help to develop scoring rubric for extended response items which will applied to score all papers. This type of scoring is called: Analytic Rubric

Identify the good item from given values of item discrimination. 0.3 - 0.39

A rubric is _____? used for assessing a particular type of work or performance

Identify the poor item from given values of item discrimination. 0.15,0.17

There are _____main types of rubric. Two

Scoring of essay items is a _____. Time Consuming

Holistic rubric are good for evaluating _____. overall performance on a task

Which interpretation of test results is most meaningful when test designed to measure a set of clearly stated learning tasks? Criterion-referenced

A test form is statistically equated to another test form to make the resulting test scores _____. Comparable

Difficulty level of an item determines

The detail of each level of performance in scoring rubric is known as: Descriptors

Following are the decisions made on the basis of high stake testing EXCEPT: Measure learning process during session

Advantages of holistic rubric involves _____. Quick scoring

Test that measure learning outcomes of students is called: Achievement test

Analytical rubric works best for: Restricted Response items

Which of the following should be school's professional security practices? Materials must be kept in a locked storage

Identifying relationship between two things is in: Matching Items

Tanveer Online Academy

Feature, trait or dimension to be measured is decided in the _____element of rubric. **Criteria**

To give an answer or make a judgment about something without being sure of all the facts is called: Guess

Which of the following option includes in reproducing the test? Knowing the photocopying machine

Which type of test typically designed for norm-referenced interpretations? Standardized

Discrimination power of an item is acceptable when its value ranges from? : 0.20 or higher

Which of the following are elements of scoring rubric? 1. Score 2. Criteria 3. Level of performance 4. Descriptors

The most commonly used guessing correction formula to predict and control is_____. **S=R-W/N-1**

Zero in raw score indicates?

When the test is ready, the next step is to _____it. administer

Which type of test is mostly used in survey test batteries? Standardized achievement

Objective type question has advantage over essay type because such questions?
A. Are easy to prepare
B. Are easy to solve
C. Are easy to mark
D. None
Answer is = C

Discrimination value of more than 0.4 means
A. Item is good
B. Item is acceptable
C. Item is weak
D. None
Answer is = B

Test involving the construction of certain patterns are called?
A. Intelligence test
B. Performance tests
C. Scholastic test
D. None
Answer is = B

In multiple choice items the stem of the items should be?
A. Large

B. Small
C. Meaningful
D. None
Answer is = C

Which appropriate verb will you use to make an objective behavioral?
A. To know
B. To appreciate
C. To understand
D. To construct
Answer is = D

Objectives representing the purposes of instruction of a teacher are called?
A. Performance
B. Instructional
C. Attainment
D. None
Answer is = B

Running description of active behavior of a student as observed by the teacher is?
A. Anecdotal record
B. Autobiography
C. Interview
D. None
Answer is = A

True-False Items are also known as: Alternatives form items

A test very popular with class room teacher is?
A. True false test
B. Multiple choices
C. Matching
D. Completion test
Answer is = B

Frequently used tools of summative evaluation are?
A. Test
B. Teacher observation
C. Daily assignment
D. None
Answer is = A

The most commonly used guessing correction formula to predict and control is?
A. S=R-W
B. S=R-W/N-1
C. S=R-w/2-1

D. None
Answer is = B

The summative evaluation is?
A. Diagnostic
B. Certifying judgment
C. Continuous
D. None
Answer is = B

The difference between maximum and minimum values is?
A. Mean
B. Mode
C. Range
D. None
Answer is = C

The number of scores lying in a class interval is?
A. Mid-point
B. Quartiles
C. Class
D. Frequencies
Answer is = D

A multiple-choice question is composed of question referred as?
A. Stem
B. Distracter
C. Foil
D. Response
Answer is = A

In a norm referenced test which item is best?
A. Item difficulty is near zero
B. Item difficulty is near 100
C. Item difficulty is near 70
D. Item difficulty is near 50
Answer is = D

Which question has increasing objectivity of marking?
A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = D

The most widely used format on standardized test in USA is?

A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = D

Which questions are difficult to mark with reliability?
A. Unstructured essay
B. Structured essay
C. Short answer
D. Multiple type questions
Answer is = A

Projective techniques are used to measure?
A. Aptitude
B. Intelligence
C. Knowledge
D. Personality
Answer is = D

Tanveer Online
