ENG515 Quiz 3...

sponta 1 of 1

Planning (Pre-writing):

Pre-writing is any activity in the classroom that encourages students to write. It stimulates thoughts for getting started. In fact, it moves students away from having to face a blank page toward generating tentative ideas and gathering information for writing. The following activities provide the learning experiences for students at this stage:

Group Brainstorming:

Group members spew out ideas about the topic. Spontaneity is important here. There is no right or wrong answers. Students may cover familiar ground first and then move off to more abstract or wild territories.

Clustering:

Students from words related to a stimulus supplied by the teacher. The words are circled and then linked by lines to show discernible cluster. Clustering is a simple yet powerful strategy: "Its visual character seems to stimulate the flow of association... and is particularly good for students who know what they want to say but just can't say it" (Proett & Gill, 1986, p.6)

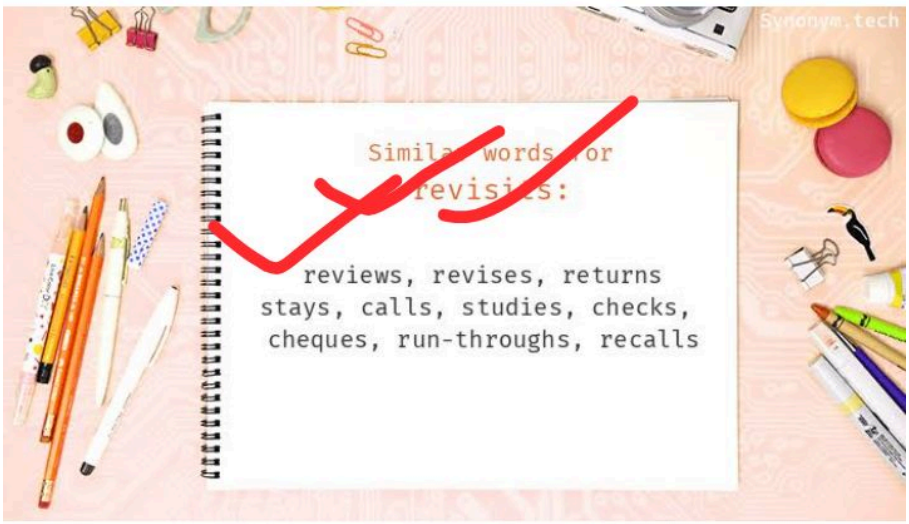

Rapid Free Writing:

Within a limited time of 1 and 2 minutes, individual students freely and quickly write down single words and phrases about a topic. The time limit keeps the writer's minds ticking and thinking fast. Rapid free writing is done when group brainstorming is not possible or because the personal nature of a certain topic requires a different strategy.

Select the correct option

- at any place

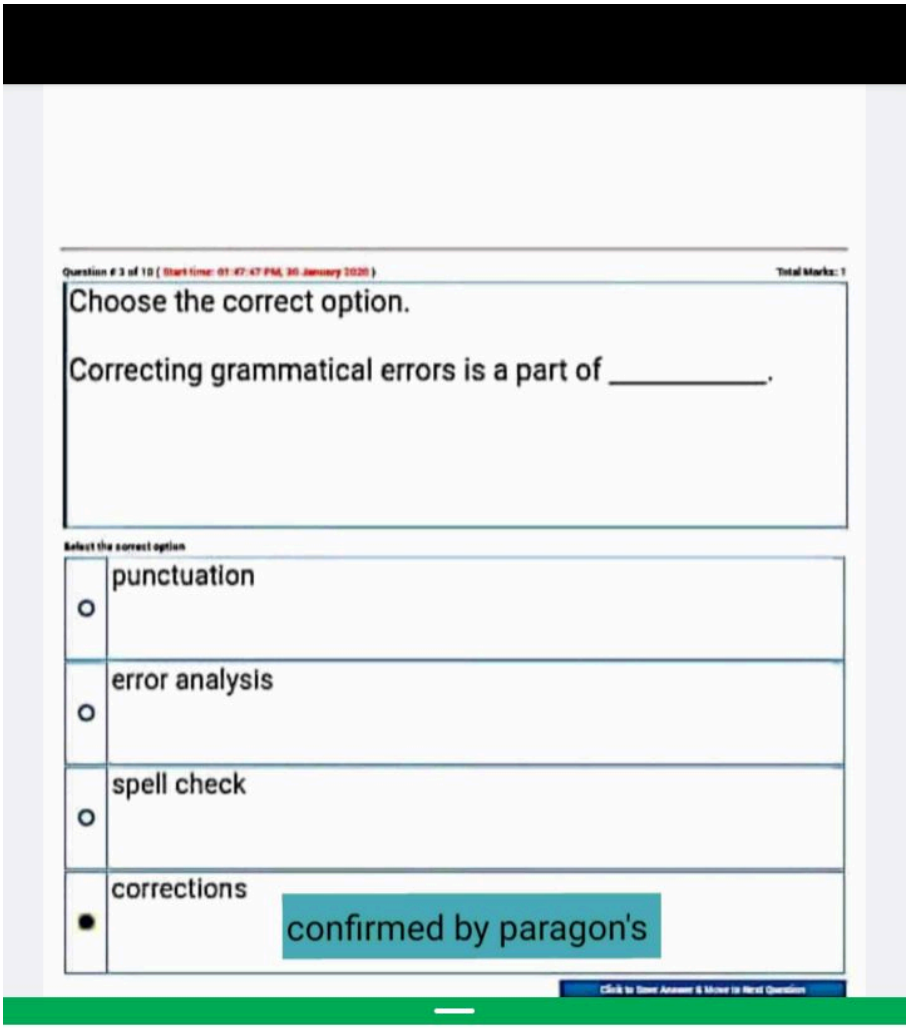

can likewise devise in-class activities that develop and expand students' schemata. Specific suggestions for schema activation and development are presented in chapters 2, 3, and 4.

Topic: 217: Contrastive Rhetoric and Its Implications for Teaching ESL Writing

As we have suggested, an important way that the schemata of L2 students differ from those of L1 writers involves their expectations about the structural properties and rhetorical functions of texts. The study of contrastive rhetoric (CR) aims to characterize these divergent expectations and their effects on L2 literacy development, including L2 writing skills. Connor (1996) wrote that "contrastive rhetoric maintains that language and writing are cultural phenomena. As a result, each language has rhetorical conventions unique to it. Furthermore, the linguistic and rhetorical conventions of the first language interfere with writing in the second language" (p. 5).

The Genesis of Contrastive Rhetoric. Kaplan's (1966) pioneering article is frequently considered to be a landmark work in the study of CR. At the time that Kaplan's article appeared, contrastive analysis (CA) and its application to foreignand second-language instruction were very much in vogue. With the CA approach, linguists and materials developers compared the grammatical structures and phonological features of learners' LIs with those of the L2 they were trying to acquire. It was believed that CA could identify specific areas of difficulty (e.g., in syntax and speech production), and that direct instruction focusing on major contrastive features could facilitate and accelerate the language learning process (Gass & Selinker, 2001; Mitchell & Myles, 1998).

Against the backdrop of CA, Kaplan (1966) suggested that L2 students' LIs also exhibited contrasting rhetorical and logical patterns. His study featured a formal analysis of more than 600 texts written by NNS writers representing a range of primary languages. On the basis of his rhetorical analysis, Kaplan proposed the following generalizations: Arabic-speaking writers make extensive use of coordination (considered excessive by Englishspeaking readers), speakers of "Oriental" languages tend to circle around a topic instead of approaching it head-on, and speakers of French and Spanish tend to digress and introduce extraneous material more

correctio 16 of 18

interaction brings many benefits.

Topic: 225: Marking Grammatical Errors

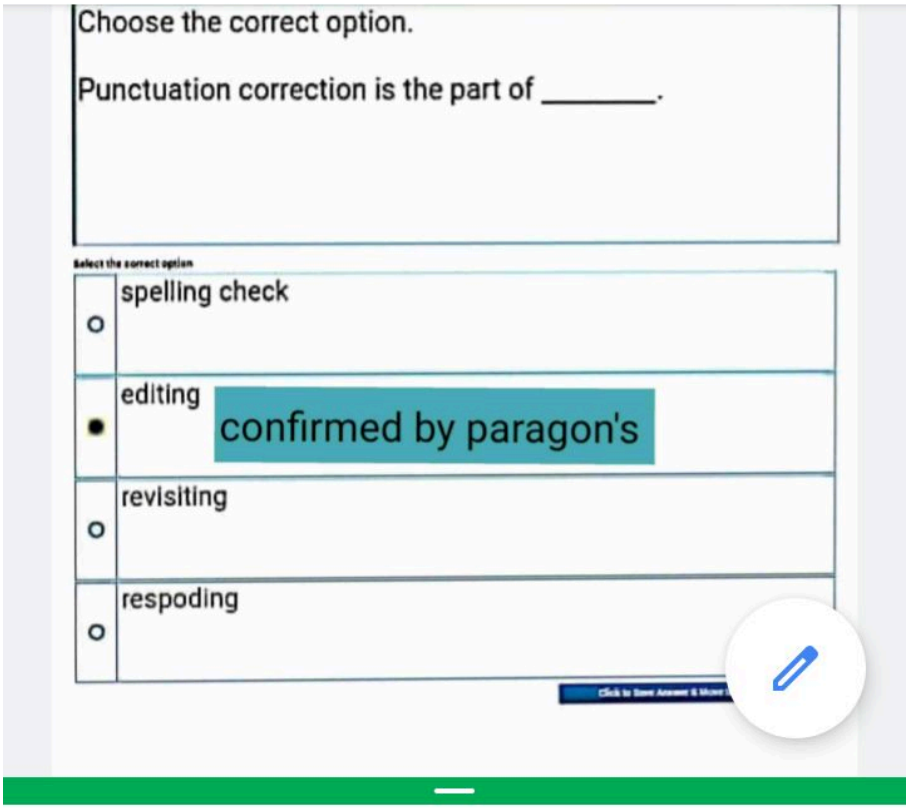

Some pieces of writing can be marked for grammatical accuracy, appropriate use of vocabulary, and spelling. This feedback can have the goal of helping learners develop knowledge and strategies for self-correction. Learners at intermediate and advanced levels appreciate such feedback and ask for it, particularly when they have to write reports, memos, and assignments that others will read.

The most effective way of giving this kind of feedback is to have a set of signals that indicate where the error occurs and what kind of error it is. The learners then have to correct their own errors after they have been marked and show their corrections to the teacher. They do not rewrite the piece of writing but make the corrections on the marked piece of writing. This makes the teacher's checking much easier. See Chapter 8 for such a scheme.

If the number of errors per 100 words is calculated and put on a graph, learners can see their improvement on this aspect of writing. When the errors per 100 words is high, around ten or more errors per 100 words, it is easy to make very quick improvement in grammatical accuracy. This is because many of the errors will involve items like subject-verb agreement, article usage, and verb group construction, which are rule-based. Learning the rules and how to check their application brings quick improvement. When learners are making about three errors per 100 words, improvement is very slow because most of the errors are word-based, involving collocation, appropriacy, and grammatical patterns that apply to certain words.

Such feedback is a useful part of a well-balanced writing course, but it must not be the only kind of feedback. Too much of this detailed, negative feedback can discourage learners from writing and from taking risks when writing.

Topic: 226: Peer Evaluation

are vague become more apparent when the writers actually hear their own texts read out to them. Revision often becomes more voluntary and motivating. An alternative to this would be to have individual students read their own texts into a tape recorder and take a dictation of their own writing later. Students can replay the tape as often as necessary and activate the pause button at points where they need to make productive revision of their texts.

Topic: 204: Editing II

At this stage, students are engaged in tidying up their texts as they prepare the final draft for evaluation by the teacher. They edit their own or their peer's work for grammar, spelling, punctuation, diction, sentence structure and accuracy of supportive textual material such as quotations, examples and the like. Formal editing is deferred till this phase in order that its application not disrupts the free flow of ideas during the drafting and revising stages.

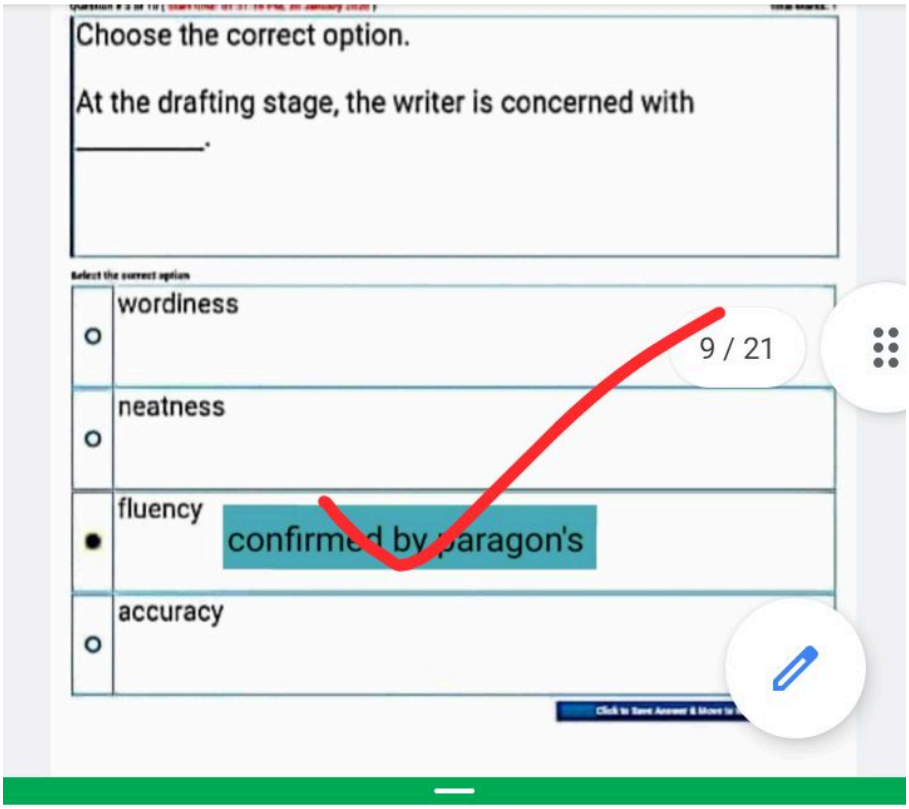

A simple checklist might be issued to students to alert them to some of the common surface errors found in students' writing: for instance:

- Have you used your verbs in the correct tense?
- Are the verb forms correct?
- Have you checked for subject-verb agreement?
- Have you used the correct prepositions?
- Have you left out the articles where they are required?
- Have you used all your pronouns correctly?
- Is your choice of adjectives and adverbs appropriate?
- Have you written in complete sentences?

The students are, however, not always expected to know where and how to correct every

2:57

ENG515 Quiz 3...

In addition, ideas for writing can be elicited from multimedia sources (e.g. printed material, videos, films), as well as from direct interviews, talks, surveys, and questionnaires.

Students will be more motivated to write when given a variety of means for gathering information during pre-writing.

Topic: 202: Drafting

One sufficient ideas are gathered at the planning stage, the first attempt at writing-that is, drafting-may proceed quickly. At the drafting stage, the writers are focused on the fluency of writing and are not preoccupied with grammatical accuracy or the neatness of the draft. One dimension of good writing is the writer's ability to visualize an audience. Although writing in the classroom is almost always for the teacher, the students may also be encouraged to write for different audience, among who are peers, other classmates, pen-friends and family members. A

Activity 1

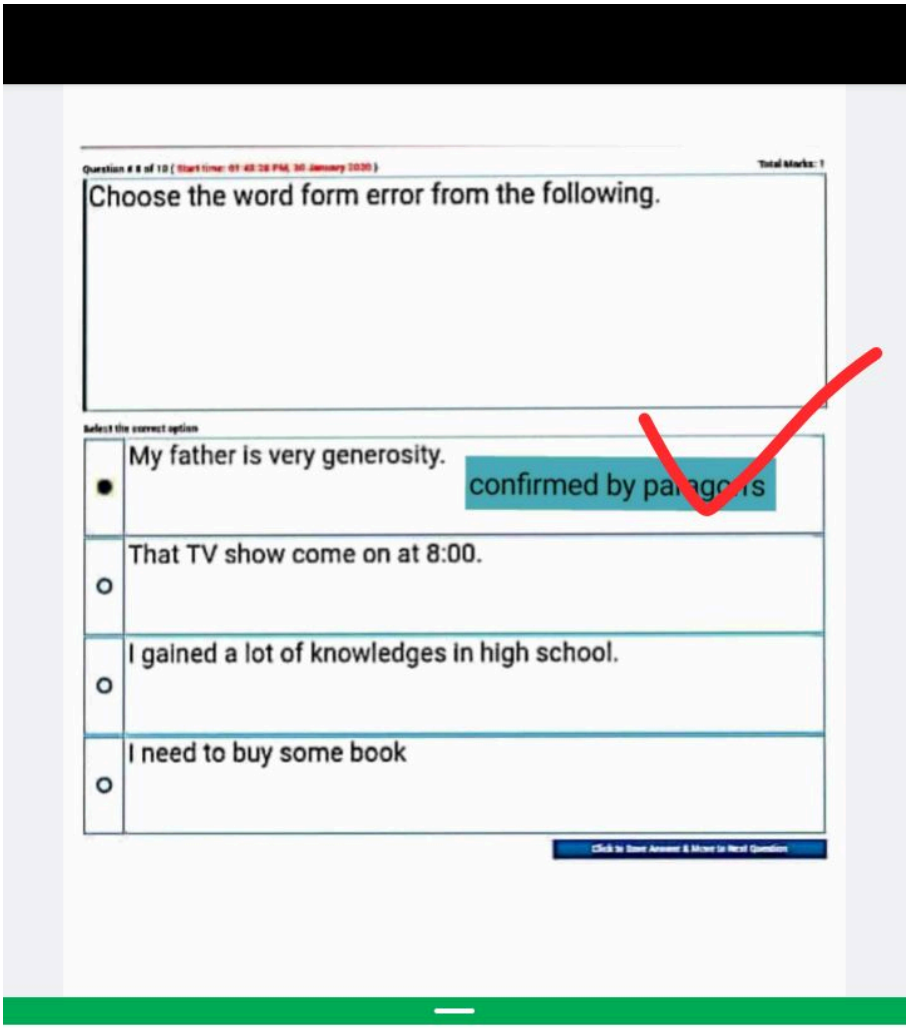

Editing: Major Error Categories

Type 1: Nouns

- *Noun endings*
  I need to buy some *book.*
  I gained a lot of *knowledges* in high school.
- *Articles*
  I need to buy ∧ *book.*
  A good *jobs* is hard to find.

Type 2: Verbs

- *Subject-verb agreement*
  The boys *was* hungry.
  That TV show *come* on at 8:00.
  Many students in the class *is* failing.
- *Verb tense*
  Last year I *come* to Sac State.
  I've never been to Disney World, but I *had been* to Disneyland before.
- *Verb form*
  My car *was stole*

- *Semicolon errors*
  Although I studied hard for the test; I still got a bad grade.
  I studied hard for the test ∧ I still got a bad grade.

Type 4: Word Form Errors
Examples:
My father is very *generosity.*
Intelligent is *importance* for academic success.

Type 5: Preposition Errors
Examples:
I do a lot of work *on* volunteer organizations.
For an American, I like baseball and hot dogs.

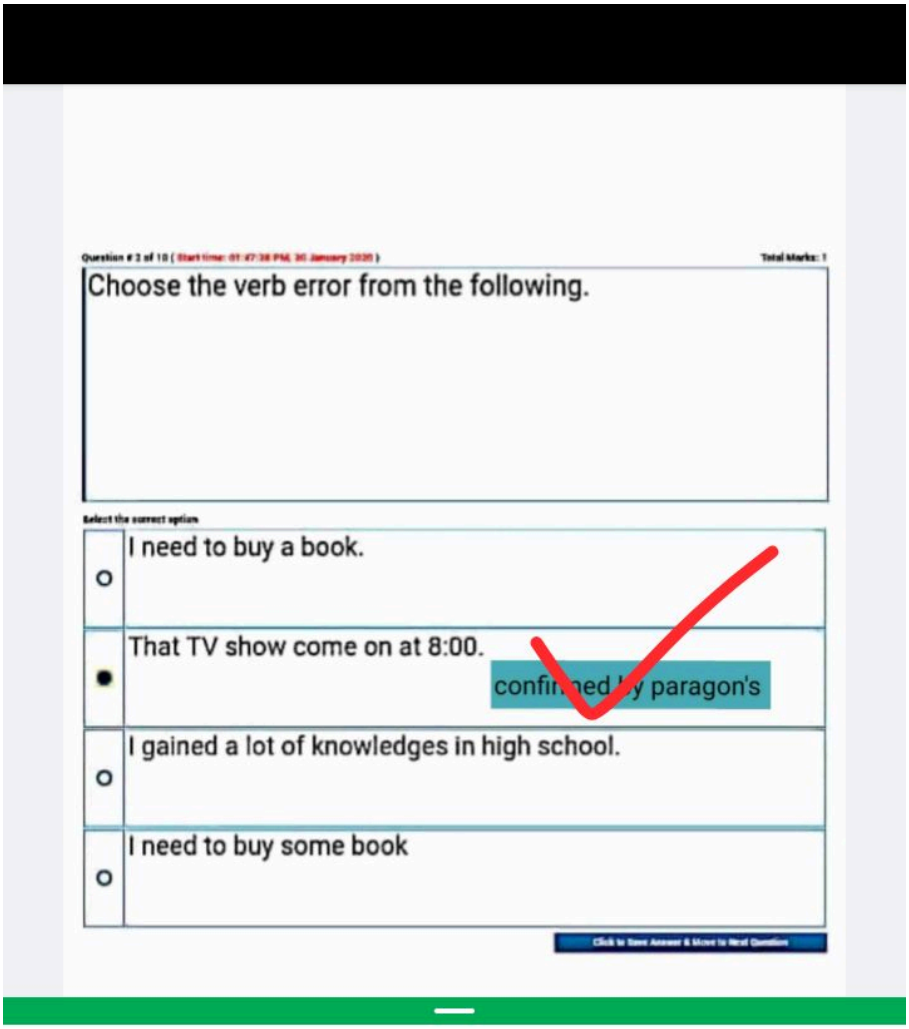

Editing Worksheet

Instructions: Read the sample essay. First, find all the nouns, and underline any noun errors. Then do the same with verbs, punctuation/sentence structure. word forms, and prepositions. Count the errors of each type and fill in the worksheet below. Turn in both your marked essay and this worksheet.

Type 1: Noun Errors
Total number of noun errors in essay: _____
Write one example from the essay. Underline the error.

Type 2: Verb Errors
Total number of verb errors in essay: _____
Write one example from the essay. Underline the error.

Type 3: Punctuation and Sentence Structure
Total number of punctuation errors in essay: _____
Write one example from the essay. Underline the error.

ENG515 Quiz 3...

Choose the correct option.

Cognitivists are different from expressivists in _____.

Select the correct option

- ● all of the given options
- ○ elaborating definitions
- ○ planning
- ○ higher order thinking

confirmed by paragon's

expressivi 1 of 5

Edit with WPS Office

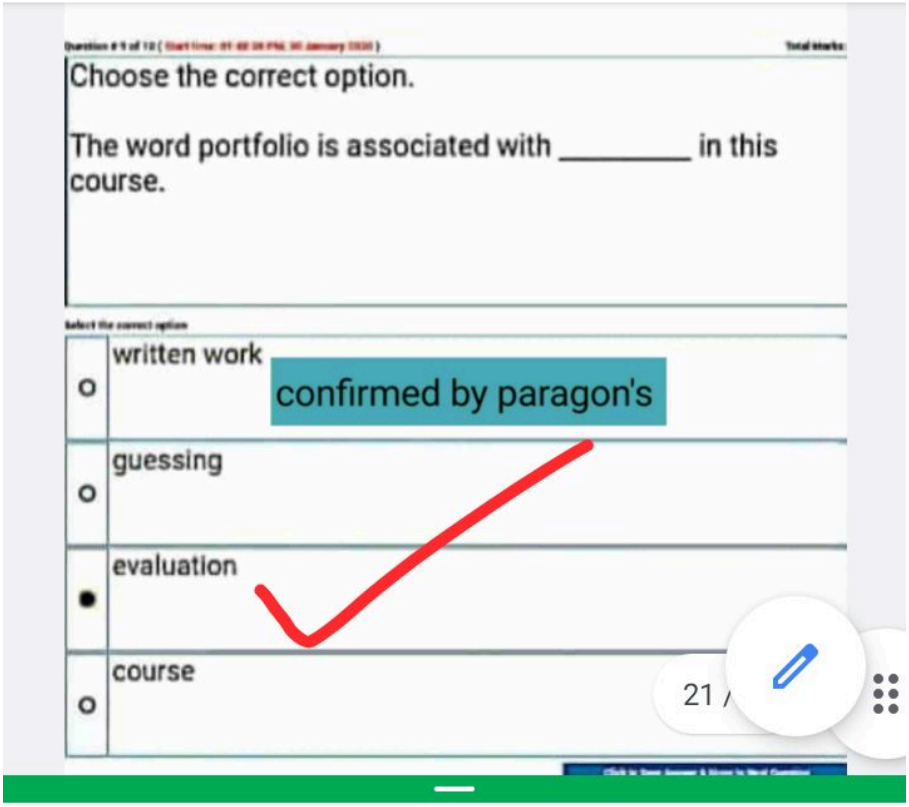

writers' composing processes as recursive, personal, and inner directed (Britton, 1992). Cognitivists placed considerably greater value than did expressivists on high-order thinking and problem-solving operations. These operations included planning, defining rhetorical problems, positioning problems in a larger context, elaborating definitions, proposing solutions, and generating grounded conclusions (Emig, 1983; Flower, 1985,1989; Hayes & Flower, 1983).

Hallmarks of cognitivist approaches to teaching L1 and L2 writing as a process include invention and prewriting tasks, drafting of multiple versions of writing assignments, abundant textlevel revision, collaborative writing, feedback sessions, and the postponement of editing until the final stages of the composing cycle (Atkinson, 2003b; Clark, 2003b; Murray, 1992; see chapters 3, 4, and 5). Cognitivist rhetoricians and L2 writing practitioners thus focused principally on developing writers' intramental processes, particularly cognitive and metacognitive strategies for creating, revising, and correcting their texts independently (Bereiter & Scardamalia, 1987; Berlin, 1988; de Larios, Murphy, & Marín, 2002; Flower, 1989; Ransdell & Barbier, 2002a, 2002b). From a cognitivist, process-based perspective, writing is "essentially learnt, not taught, and the teacher's role is to be nondirective and facilitating, assisting writers to express their own meanings through an encouraging and cooperative environment with minimal interference" (Hyland, 2003, p. 18).

portfolio 8 of 17

Lesson 36

Planning a writing course II

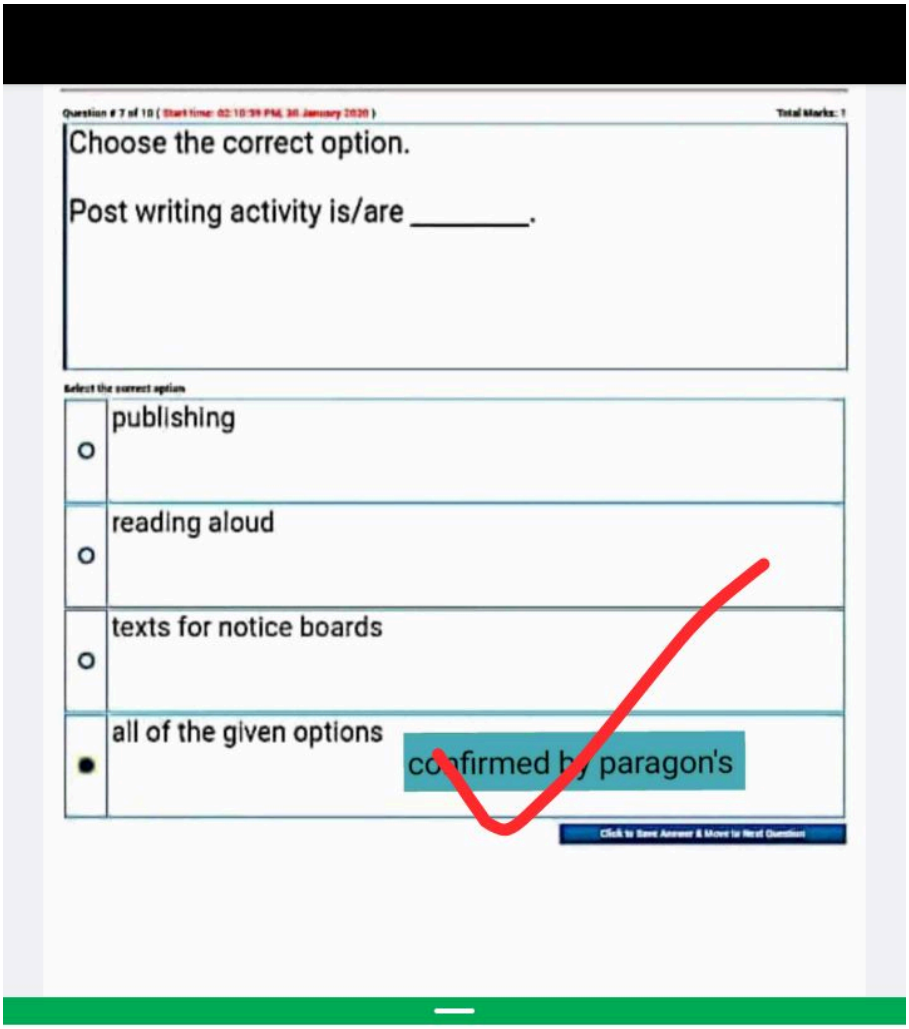

Topic: 199: Evaluating the Course

Teachers use sentence tests and essay tests to evaluate student's progress. They use the results of these tests in addition to questionnaires and their own reflective logs to evaluate their own success as teachers. One form of evaluation that is becoming increasingly popular in writing course actually helps to combine student evaluation and course evaluation: the use of portfolios. Although students work on multiple drafts of their writing, which are guided by their instructor but not graded. At the end, they select three or four specified types of writing to include in the portfolio, both in-class writing and revised work. They write a cover letter assessing their work and their progress and what they have learned in the course. The portfolio is then evaluated by another instructor in the program, who assigns a grade. So the original instructor in coach, not evaluator. These portfolios lead assigns a grade. So the original instructor is coach, not evaluator. These portfolio lead students to want to revise, to present their best work. They also provide a valuable ongoing teacher-training tool, since teachers continually discuss appropriate assignments and qualities of acceptable and student writing-a salutary lesson.

Probably, enough problematic considerations about planning a writing course been presented to give you food for thought for a while. But let's round off our steps one last, vital step.

Topic: 200: Reflecting the Teacher's Experience

Goals, theories, content, focus, syllabus, materials, activities, feedback, and course evaluation are substantive matters that we have to address whenever we design a writing course, but they pale into insignificance beside one thing: ourselves and our experience. In fact,

publishing 3 of 8...

communication. Depending on the purpose of evaluation, a numerical score or grade may be assigned.

Students may be encouraged to evaluate their own and each other's texts once they have been properly taught how to do it. In this way, they are made to be more responsible for their own writing.

Post writing:

Post-writing constitutes any classroom activity that the teacher ad students can do with the completed pieces of writing. This includes publishing, sharing, reading aloud, transforming texts for stage performances, or merely displaying texts on notice-boards. The post-writing stage is a platform for recognizing students' work as important and worthwhile. It may be used as a motivation for writing as well as to hedge against students finding excuses for writing. Students must be made to feel that they are writing for a very real purpose.

Topic: 206: Implementing Process

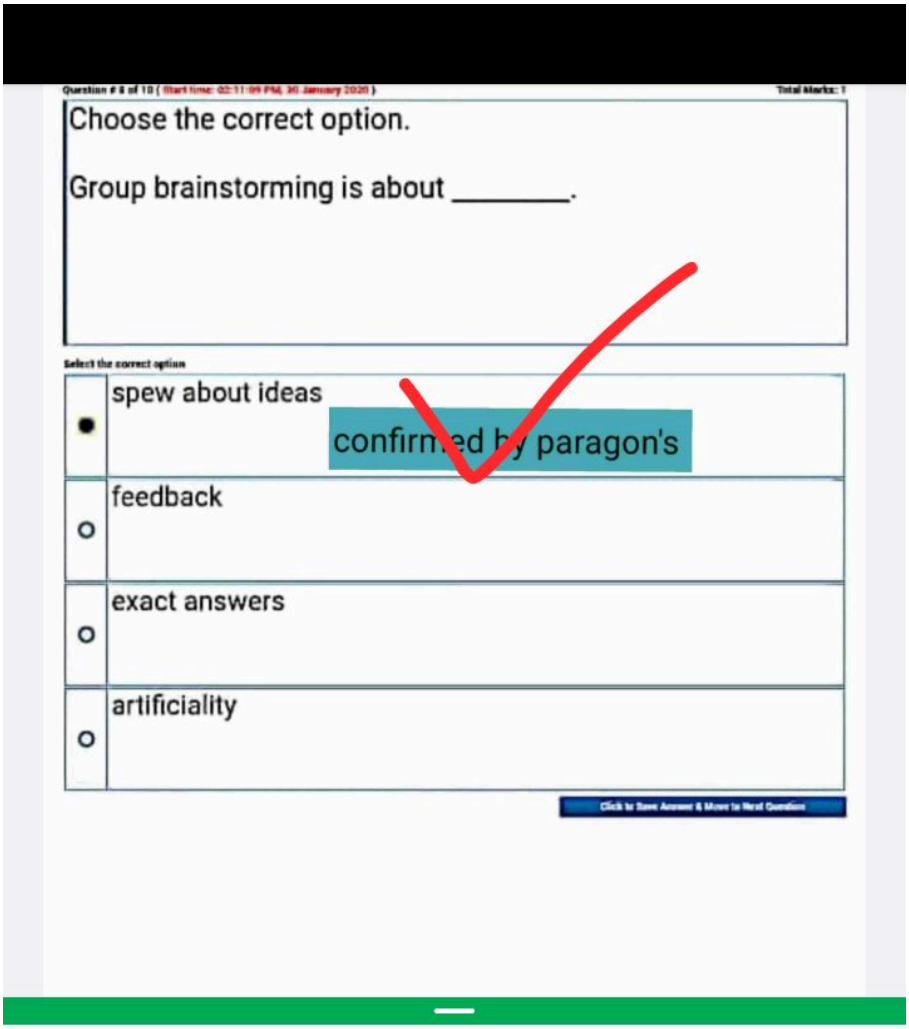

Here are some pointers which teachers may like to take note of when impleme processes writing:

260 / 339

Teacher Modeling:

Teachers should model the writing process at every stage and teach specific writing strategies to students through meaningful classroom activities.

Edit with WPS Office

spew 1 of 1...

Pre-writing is any activity in the classroom that encourages students to write. It stimulates thoughts for getting started. In fact, it moves students away from having to face a blank page toward generating tentative ideas and gathering information for writing. The following activities provide the learning experiences for students at this stage:

Group Brainstorming:

Group members spew out ideas about the topic. Spontaneity is important here. There is no right or wrong answers. Students may cover familiar ground first and then move off to more abstract or wild territories.

Clustering:

Students from words related to a stimulus supplied by the teacher. The words are circled and then linked by lines to show discernible cluster. Clustering is a simple yet powerful strategy: "Its visual character seems to stimulate the flow of association... and is particularly good for students who know what they want to say but just can't say it" (Proett & Gill, 1986, p.6)

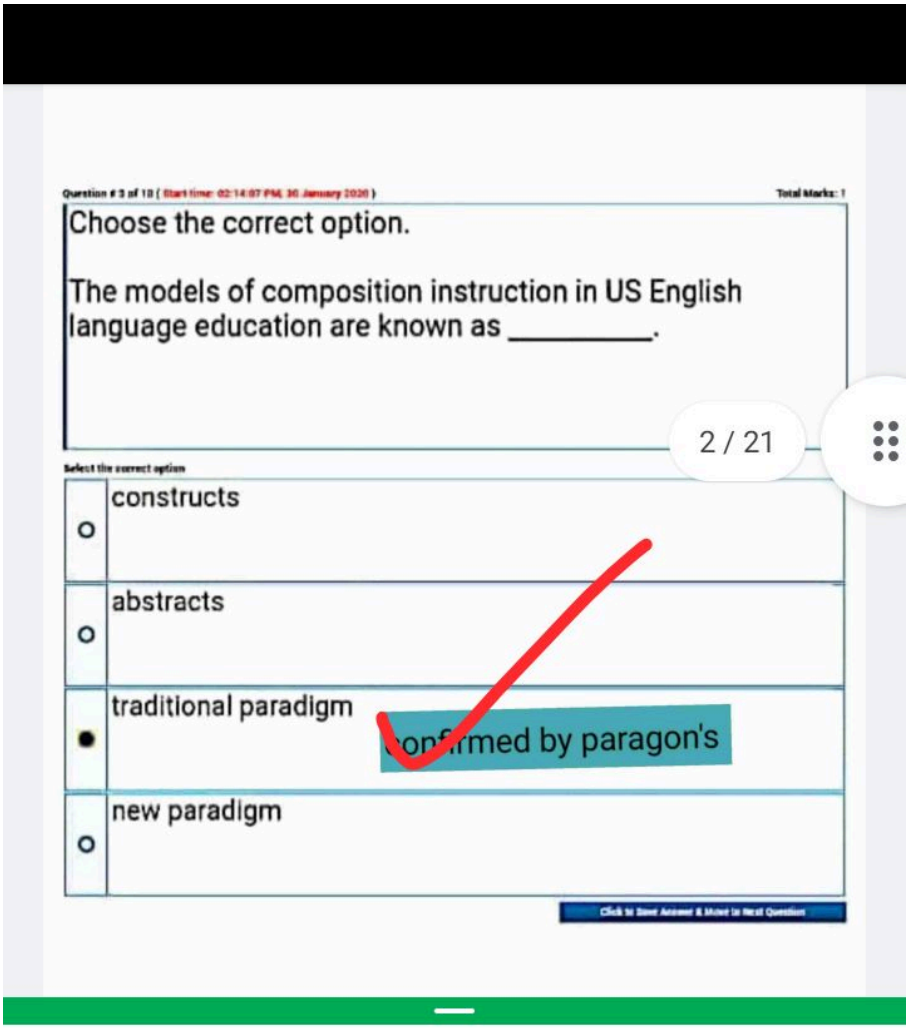

Rapid Free Writing:

Within a limited time of 1 and 2 minutes, individual students freely and quickly write down single words and phrases about a topic. The time limit keeps the writer's minds ticking and thinking fast. Rapid free writing is done when group brainstorming is not possible or because the personal nature of a certain topic requires a different strategy.

WH-Question:

Students generate *who, why, what, where, when and how* question about a topic. More such questions can be asked of answers to the first string of *wh-questions*, and so on. This can go on indefinitely.

In addition, ideas for writing can be elicited from multimedia sources (e.g. printed material,

Next, the teacher assigned a composing task based on the literary text, referring back to the rhetorical description introduced earlier. This sequence often was accompanied by a linear outline or template for students to follow in constructing their essays or themes. In the final phase of the instructional sequence, the teacher evaluated the students' assignments before initiating a similar cycle based on a new literary text.

This model of composition instruction, known by some as the "traditional paradigm" in U.S. English language education (Berlin, 1987; Bloom, Daiker, & White, 1997; Clark, 2003b, 2003c, 2003d) and by others as the "product approach" (Kroll, 2001), was not grounded in a fully articulated theory of education or cognitive development. Indeed, the traditional paradigm reflected a perspective in which school-based essays and themes were viewed as static representations of students' learning and content knowledge. Therefore, in product-oriented writing classrooms, little if any effort was dedicated to the strategies and other cognitive operations involved in putting pen to paper (or fingers to the keyboard) and drafting a coherent, meaningful piece of connected discourse.

The Process Movement and Allied Pedagogies in L1 and L2 Composition

The 1960s, 1970s, and 1980s witnessed a highly influential trend in L1 composition pedagogy and research. "Process approaches," as they now are broadly labeled, emphasized the individual writer as a creator of original ideas. It was believed that written discourse encoded these ideas, serving as a vehicle for exploring oneself, conveying one's thoughts, and claiming one's individual voice, or authorial persona, as a writer. Process-oriented writing pedagogies focused particular attention on procedures for solving problems, discovering ideas, expressing them in writing, and revising emergent texts—typically, in isolation from any cultural, educational, or sociopolitical contexts in which writing might take place (Canagarajah, 2002; Casanave, 2003;
