OBJCTIVES OF CURRENT PAPER

BT101 - Ecology, Biodiversity & Evolution-I

Mid-Term File 2023 By

SULMAN ALI (BS-ZOOLOGY)

(0341-7547044)

- ------ enables animals to survive periods of reduced food availability.
- **Torpor**
- Adult human body contains ----- of water by weight.
- **60%**
- ------- are strongly affected by light pollution.
- **Reptiles**
- In stratosphere temperature ranges from ……..near the tropopause
- **51c**
- One species gains benefits other species harmed called ……
- **Parasitism**
- ---------- is a group of population occupying same space in a particular time.
- **Community**
- He joined ---------- of medicine Scotland in 1825 but he was not interested in being physician.
- **School**
- ----------of an animal that warns predators it is toxic, distasteful or dangerous.
- **Appearance**
- Primary decomposer . Release digestive enzymes by their hyphae. Absorb organic matter and release CO2
- **Fungi**
- What percent of the air includes water vapor, carbon dioxide and methane----
---
- **1%**
- The external factors are --------

- **Climate And Topography**
- Oxygen made stable ------ of atmosphere
- **15%**
- Which animal change its color rapidly ---------
- **Chameleon**
- plants, algae, and cyanobacteria are the examples of------
- **Photoautotrophs**
- Cascade Effect Removal of …..in environment
- **apex predator**
- ------- is key element in survival of life.
- **Atmosphere**
- Atmosphere have------
- **5 layers**
- One species gain benefit other species is harmed
- **Parasitism**
- Fungi is ____ decomposer
- **Primary**
- CH4, Nitrous oxide, CO2 are----
- **greenhouse gas**
- ------is the removed of the forest
- **Deforstation**
- Organic Compounds that contain ---atoms
- **Carbon**
- The total average height of troposphere is _____.
- **13 km**
- .---------- is process of increasing concentration of toxic substance.
- **Biomagnifications**
- First evolutionary scheme was proposed by jean Baptiste Lamarck in -----
- **1809**
- Jean Baptiste Lamarck ----- was a distinguished French zoologist.
- (**1744–1829**)
- ----is the amount of chemical energy as biomass that primary producers create in a given length of time.
- **Gross primary production (GPP)**
- Thermosphere Layer, directly above the mesosphere and below the -------
- **exosphere**.
- Plants use light energy in photosynthesis. They convert ----
- **light energy into chemical bond energy**
- ----- is Breakdown of tissues by bacteria.
- **Putrefaction**
- -------is Natural environment where a species/organism lives.
- **Habitat**
- solar nebula is ----------
- **(disc of dirt and gases)**
- 541 million years ago, O2 made stable ------of atmosphere.
- **15%**
- ----- is Rain water soaks into (infiltrates) the ground, into the soil and underlying rock layers.
- **Percolation**

- ------is Removal of a forest or stand of trees from land which is then converted to a non-forest use.
- **Deforestation**
- Sound that is unwanted or disrupts one's quality of life is called as----
- **Noise pollution.**
- ----------is The small amount of greenhouse gases (H2O, CO2, methane) traps (**absorb and re-emit**) the infrared radiation. Increasing the temperature of the atmosphere.
- **Greenhouse effect**
- Regions with identical climate have different floras and faunas ----------
- **(Buffon's Law)**
- Chemicals added to the atmosphere by natural events or human activities in high enough concentrations to be harmful
- **Air Pollutants**
- The second major layer of Earth's atmosphere is ----------
- **(Stratosphere)**
- The resemblance of one species to another for protective or aggressive purposes-----
- **Mimicry**
- The first community to become established in an area is called the …community
- **Pioneer**
- When a population reaches a ----------, there are more individuals trying to use the same quantity of resources.
- **high density**
- Energy is lost through -------at every level.
- **Respiration**
- Effect flows down through a trophic chain. From apex predator to lower trophic levels
- **Top-Down Effect**
- ----------can be at trophic level as well. They return nutrients back in soil to be available for producers.
- **Detritivore and decomposers**
- All organisms need ------ to function
- **Energy**
