Theory of Learning

Cooperative learning advocates draw heavily on the theoretical work of developmental -psychologists Jean Piaget (e.g., 1965) and Lev Vygotsky (e.g., 1962), both of whom stress the central role of social interaction in learning. As we have indicated, a central premise of CLL is that learners develop communicative competence in a language by conversing in socially or pedagogically structured situations. CLL advocates have proposed certain interactive structures that are considered optimal for learning the appropriate rules and practices in conversing in a new language.

CLL also seeks to develop learners' critical thinking skills, which are seen as central to learning of any sort. Some authors have even elevated critical thinking to the same level of focus as that of the basic language skills of reading, writing, listening, and speaking (Kagan, 1992). One approach to integrating the teaching of critical thinking adopted by CLL advocates is called the Question Matrix (Wiederhold, 1995). Wiederhold has developed a battery of cooperative activities built on the matrix that encourages learners to ask and respond to a deeper array of alternative question types. Activities of this kind are believed to foster the development of critical thinking. (The matrix is based on the well-known Taxonomy of Educational Objectives devised by Bloom [1956], which assumes a hierarchy of learning objectives ranging from simple recall of information to forming conceptual judgments.) Kagan and other CL theorists have adopted this framework as an underlying learning theory for Cooperative Learning.

The word cooperative in Cooperative Learning emphasizes another important dimension of CLL: It seeks to develop classrooms that foster cooperation rather than competition in learning. Advocates of CLL, in general education, stress the benefits of cooperation in promoting learning:

Lesson-20

COOPERATIVE LANGUAGE LEARNING

Topic-096: Background of Cooperative Language Learning

Cooperative Language Learning (CLL) is part of a more general instructional approach also known as Collaborative Learning (CL). Cooperative Learning is an approach to teaching that makes maximum use of cooperative activities involving pairs and small groups of learners in the classroom. It has been defined as follows:

Cooperative learning is a group learning activity organized so that learning is dependent on the socially structured exchange of information between learners in groups and in which each learner is held accountable for his or her own learning and is motivated to increase the learning of others (Olsen and Kagan, 1992, p. 8).

Cooperative Learning has antecedents in proposals for peer-tutoring and peer-monitoring that go back hundreds of years and longer. The early twentieth century U.S. educator John Dewey is usually credited with promoting the idea of building cooperation in learning into regular classrooms on a regular and systematic basis (Rodgers, 1988). It was more generally promoted and developed in the United States in the 1960s and 1970s as a response to the forced integration of public schools and has been substantially refined and developed since then. Educators were concerned that traditional models of classroom learning were teacher-fronted, fostered competition rather than cooperation, and favored majority students. They believed that minority students might fall behind higher-achieving students in this kind of learning environment. Cooperative Learning in this context sought to do the following:

- raise the achievement of all students, including those who are gifted or academically

BIA

limit their search for words to one language only. This has been called non-selective access. Selective access means that only one language is addressed at a time. Experimental evidence on multilingual processing points to have non-selective lexical access, rather than selective access. A method of investigation that is commonly used for this purpose is the lexical decision task (LDT) with priming. In LDTs, the participants are shown strings of letters on a computer screen and are asked to say whether that string is an existing word in a specified language. The subject's response time is measured. In a priming condition, the words on the screen are preceded by another word, the prime. By varying the prime and the context of the experiment, reaction time differences can be measured between a cross-linguistic priming condition (with prime blanc and target white) and a control condition (grand –white). These experiments show clear cross-linguistic priming effects that cannot be accounted for when one of the languages is switched off. Other evidences support non-selective access. One of these is the 'neighborhood' effect, longer response times are found for words that have many neighbors, i.e. words such as word, work, worm, warm, and so on that are very similar in form to many other words. This effect is not limited to neighbors within one language, but also occurs across the languages. The observation that lexical items can affect the activation of other lexical items, even across languages, is the basis of the BIA (Bilingual Interactive Activation) model of lexical processing. In this model, all lexical items are part of the same network. As lexical items are connected through this network, the activation of one lexical item may interactively affect the level of activation of all the attached lexical items. Multilingual interactive activation may occur as a result of overlap in meaning, overlap in form or any other common characteristic. From this perspective, code switching and cross-linguistic priming effects can logically be responsible. A speaker may come up with a lexical item from another language simply because that item has a much higher level of activation, for instance resulting from its higher frequency. Language development can also be viewed from this perspective at lower levels of proficiency, L2 items may generally have a lower level of activation due to lower frequencies and less interaction, as the network of this language subset will be relatively small. At higher levels of development, the lexical connections within the L2 network will become stronger.

Issues of Linguistic Identity and Power

The issues of language and power run as a common thread throughout the history of Pakistan. The child learn his/her first language at home and as the child goes to scholl he has exposed to Urdu language and then he has introduced with English language at grade six in government institutions. Whereas, at private sector school he has made to learn English from grade one. The complexity is added with code switching and code mixing where the speakers mix the words of their local language or Urdu in teaching or learning of English. Keeping in mind all the scenario of bilingualism, the Grammar translation Method is widely used to teach English in Pakistan.

ncq

than current practices?

• How compatible is it with teachers' existing beliefs and attitudes and with the organization and practices within classrooms and schools? - Is the new approach or method very complicated and difficult to under- stand and use?

• Has it been tested out in some schools and classrooms before teachers are expected to use it?

• Have the benefits of the new approach or method been clearly communicated to teachers and institutions?

• How clear and practical is the new approach or method? Are its expectations stated in ways that clearly show how it can be used in the classroom?

Considerations before adopting any approach or method
☐ What advantages does the new approach or method offer?
☐ How compatible is it with teachers' existing beliefs and attit
☐ How clear and practical is the new approach or method?
☐ Has it been tested out in some schools and classrooms?

.Q **Eclectic Approach**

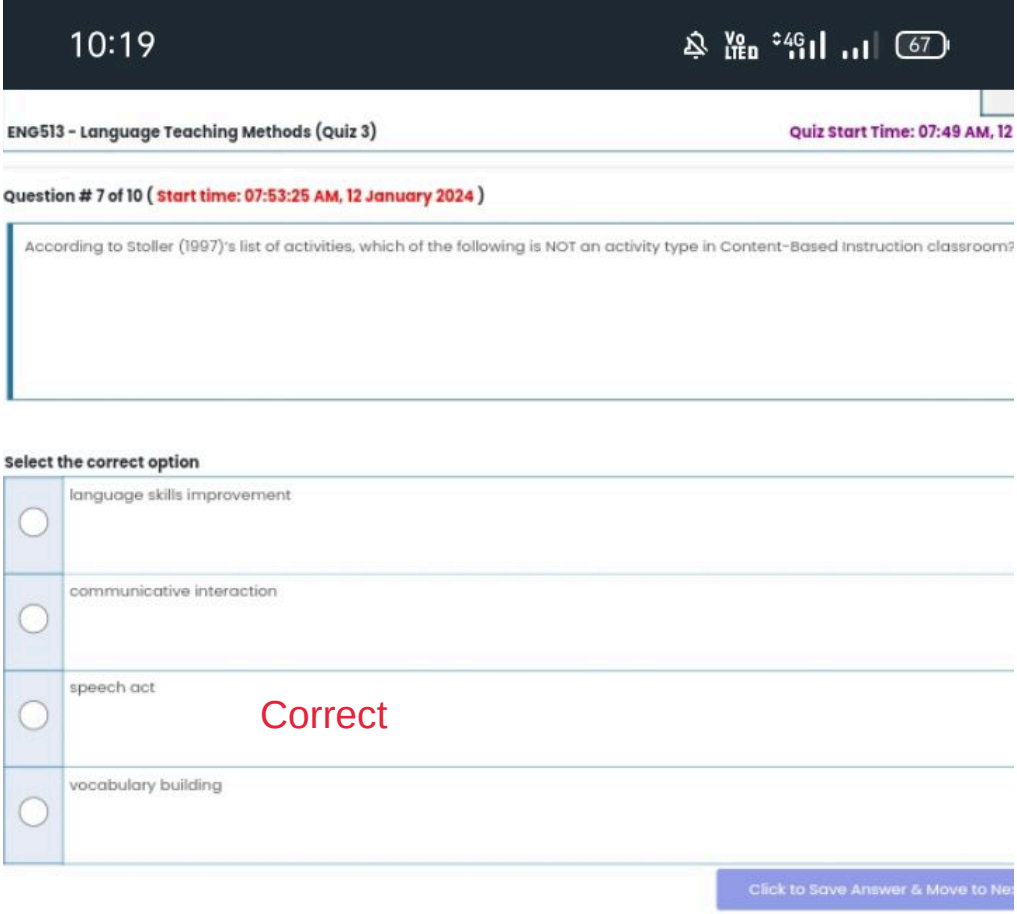

• Main proponent: Rivers 1981

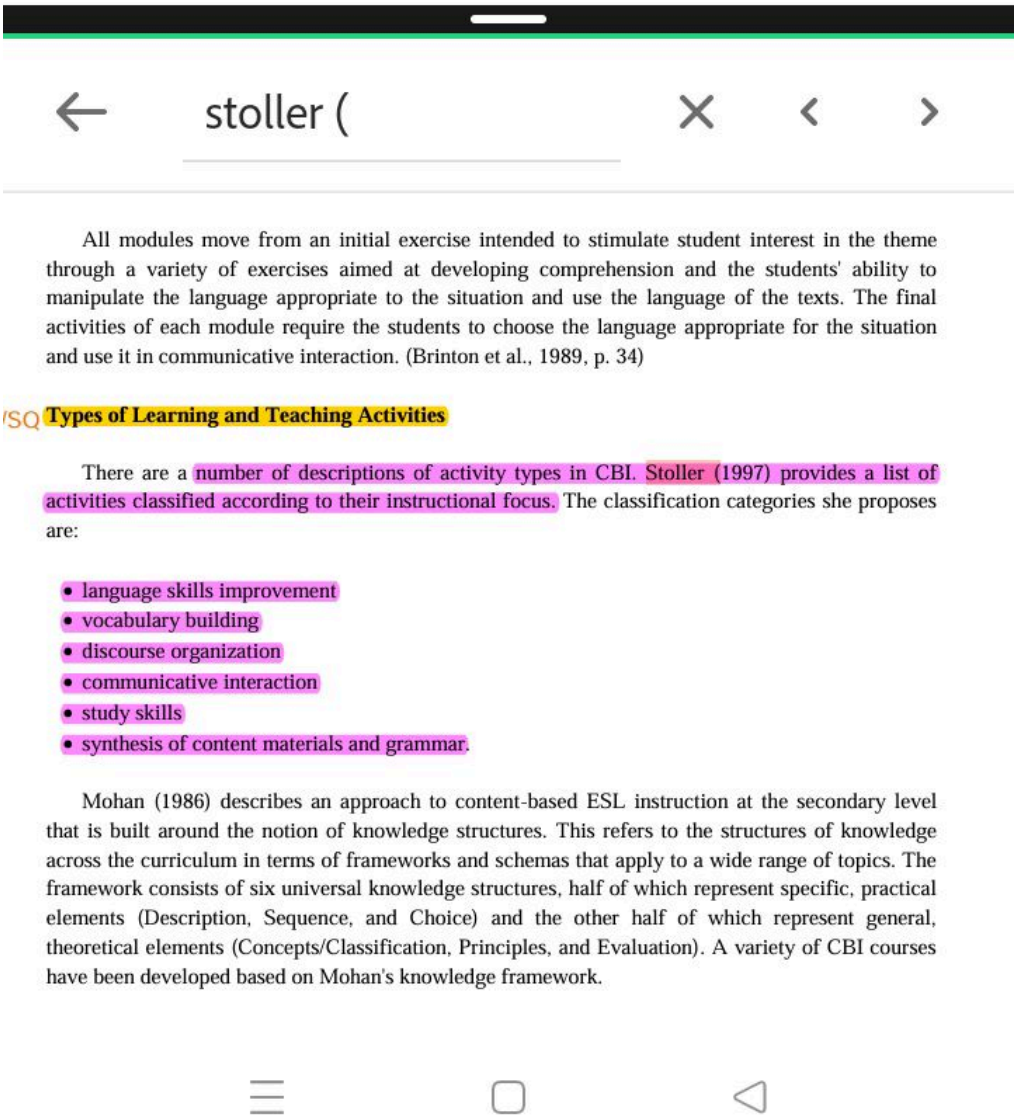

mcq • Eclectic approach is a method of language education that combines various approaches and methodologies to teach language depending on the aims of the lesson and the abilities of the learners.

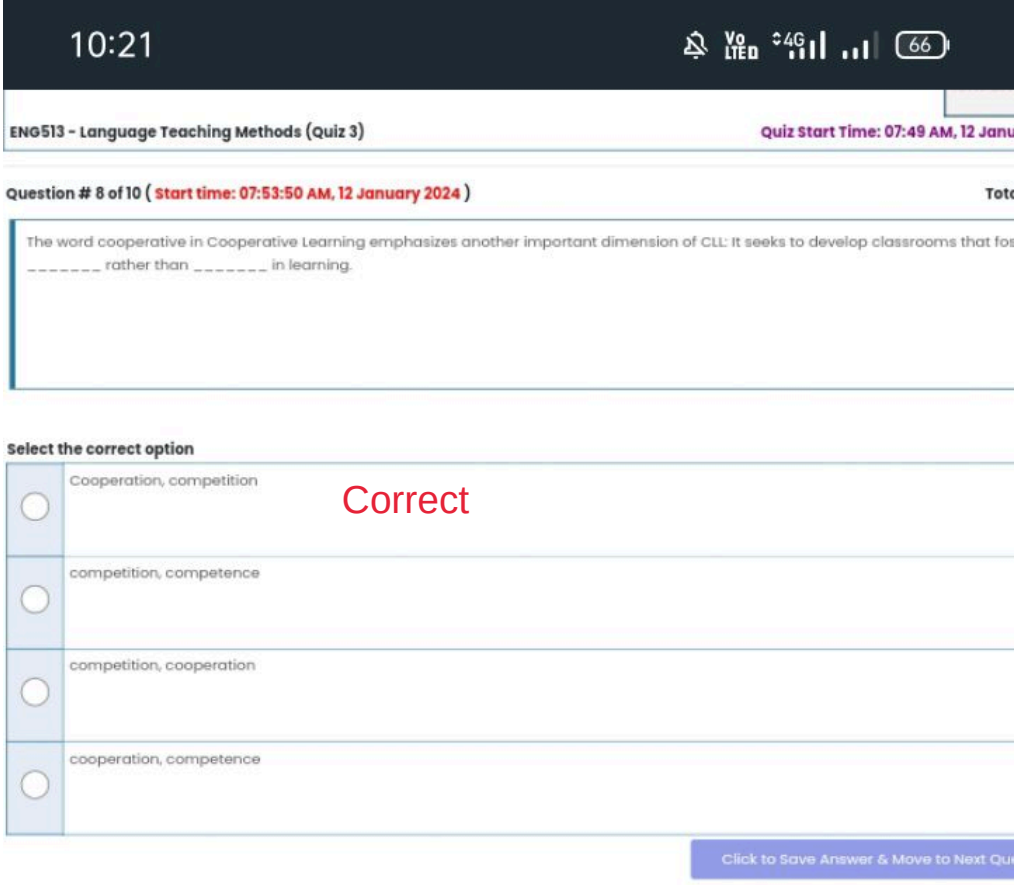

Yet the notion of methods came under criticism in the 1990s for other reasons, and a number of limitations implicit in the notion of all-purpose methods were raised. By the end of the twentieth century, mainstream language teaching no longer regarded methods as the key factor in accounting for success or failure in language teaching. Some spoke of the death of methods and approaches and the term "post-methods era" was sometimes used to refer to not using appropriate method itself. What were the major criticisms made of approaches and methods?

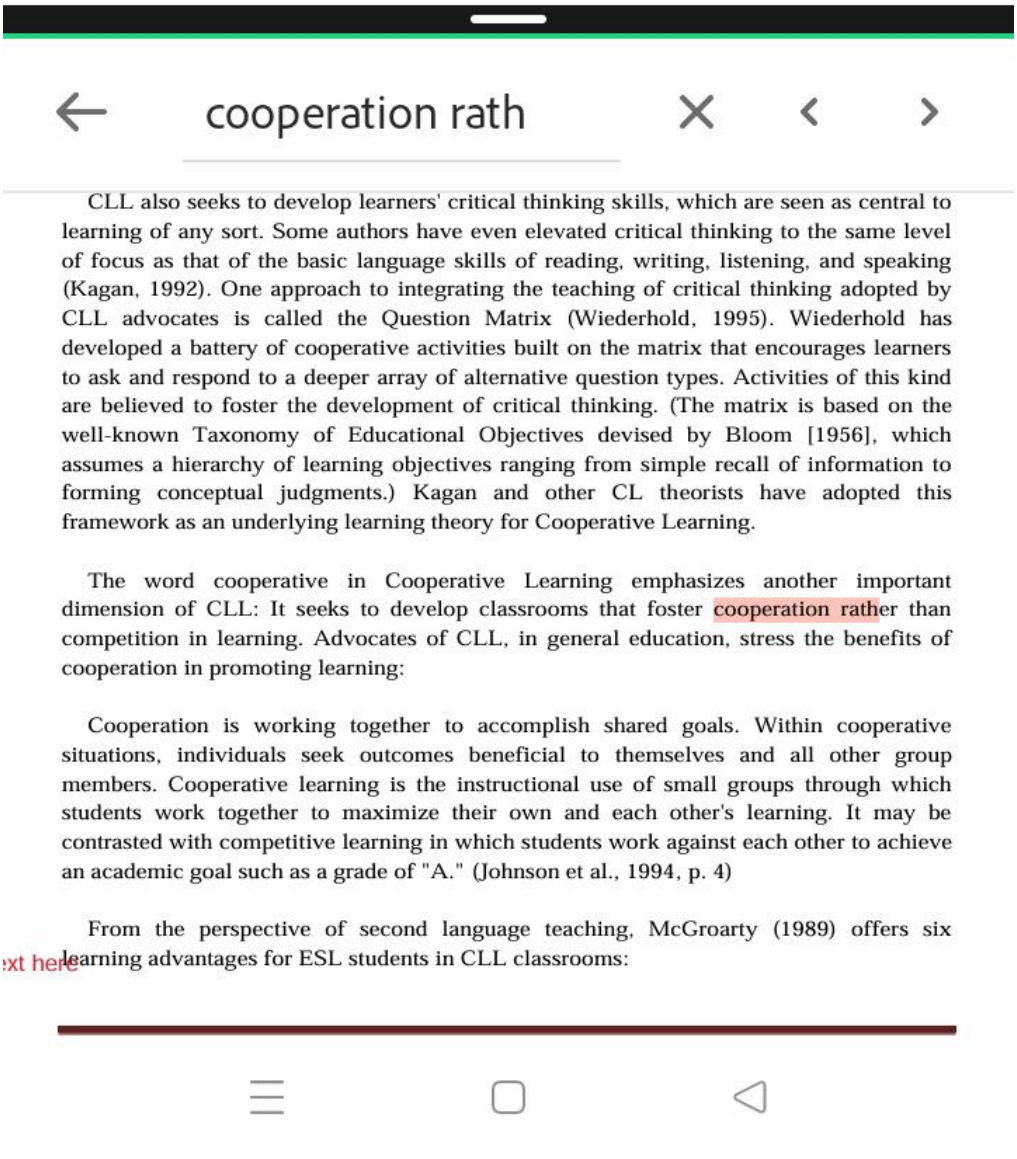

Topic-112: Why criticism on Approaches and Methods Developed over Time?

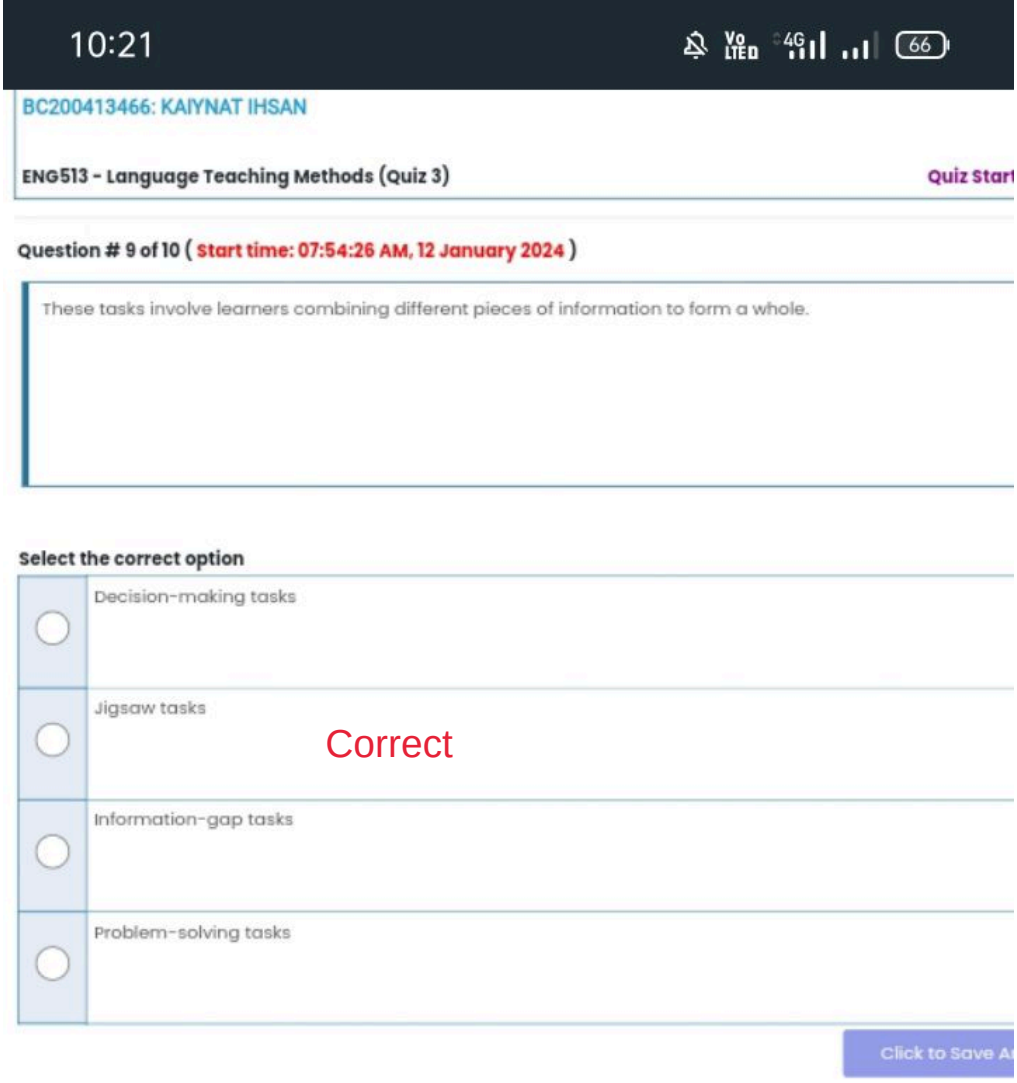

While approaches tend to allow for varying interpretations in practice, methods typically prescribe for teachers what and how to teach. Teachers have to accept on faith the claims or theory underlying the method and apply them to their own practice. Good teaching is regarded as correct

According to Stoller (1997)'s list of activities, which of the following is NOT an activity type in Content-Based Instruction classroom?
Select the correct option
language skills improvement
communicative interaction
speech act
Correct
vocabulary building
Click to Save Answer & Move to Ne

stoller (
All modules move from an initial exercise intended to stimulate student interest in the theme through a variety of exercises aimed at developing comprehension and the students' ability to manipulate the language appropriate to the situation and use the language of the texts. The final activities of each module require the students to choose the language appropriate for the situation and use it in communicative interaction. (Brinton et al., 1989, p. 34)
Types of Learning and Teaching Activities
There are a number of descriptions of activity types in CBI. Stoller (1997) provides a list of activities classified according to their instructional focus. The classification categories she proposes are:
• language skills improvement
• vocabulary building
• discourse organization
• communicative interaction
• study skills
• synthesis of content materials and grammar.
Mohan (1986) describes an approach to content-based ESL instruction at the secondary level that is built around the notion of knowledge structures. This refers to the structures of knowledge across the curriculum in terms of frameworks and schemas that apply to a wide range of topics. The framework consists of six universal knowledge structures, half of which represent specific, practical elements (Description, Sequence, and Choice) and the other half of which represent general, theoretical elements (Concepts/Classification, Principles, and Evaluation). A variety of CBI courses have been developed based on Mohan's knowledge framework.

cooperation rath
CLL also seeks to develop learners' critical thinking skills, which are seen as central to learning of any sort. Some authors have even elevated critical thinking to the same level of focus as that of the basic language skills of reading, writing, listening, and speaking (Kagan, 1992). One approach to integrating the teaching of critical thinking adopted by CLL advocates is called the Question Matrix (Wiederhold, 1995). Wiederhold has developed a battery of cooperative activities built on the matrix that encourages learners to ask and respond to a deeper array of alternative question types. Activities of this kind are believed to foster the development of critical thinking. (The matrix is based on the well-known Taxonomy of Educational Objectives devised by Bloom [1956], which assumes a hierarchy of learning objectives ranging from simple recall of information to forming conceptual judgments.) Kagan and other CL theorists have adopted this framework as an underlying learning theory for Cooperative Learning.
The word cooperative in Cooperative Learning emphasizes another important dimension of CLL: It seeks to develop classrooms that foster cooperation rather than competition in learning. Advocates of CLL, in general education, stress the benefits of cooperation in promoting learning:
Cooperation is working together to accomplish shared goals. Within cooperative situations, individuals seek outcomes beneficial to themselves and all other group members. Cooperative learning is the instructional use of small groups through which students work together to maximize their own and each other's learning. It may be contrasted with competitive learning in which students work against each other to achieve an academic goal such as a grade of "A." (Johnson et al., 1994, p. 4)
From the perspective of second language teaching, McGroarty (1989) offers six learning advantages for ESL students in CLL classrooms:
ext here

traditional knowledge hierarchies. She labels her task examples as follows:

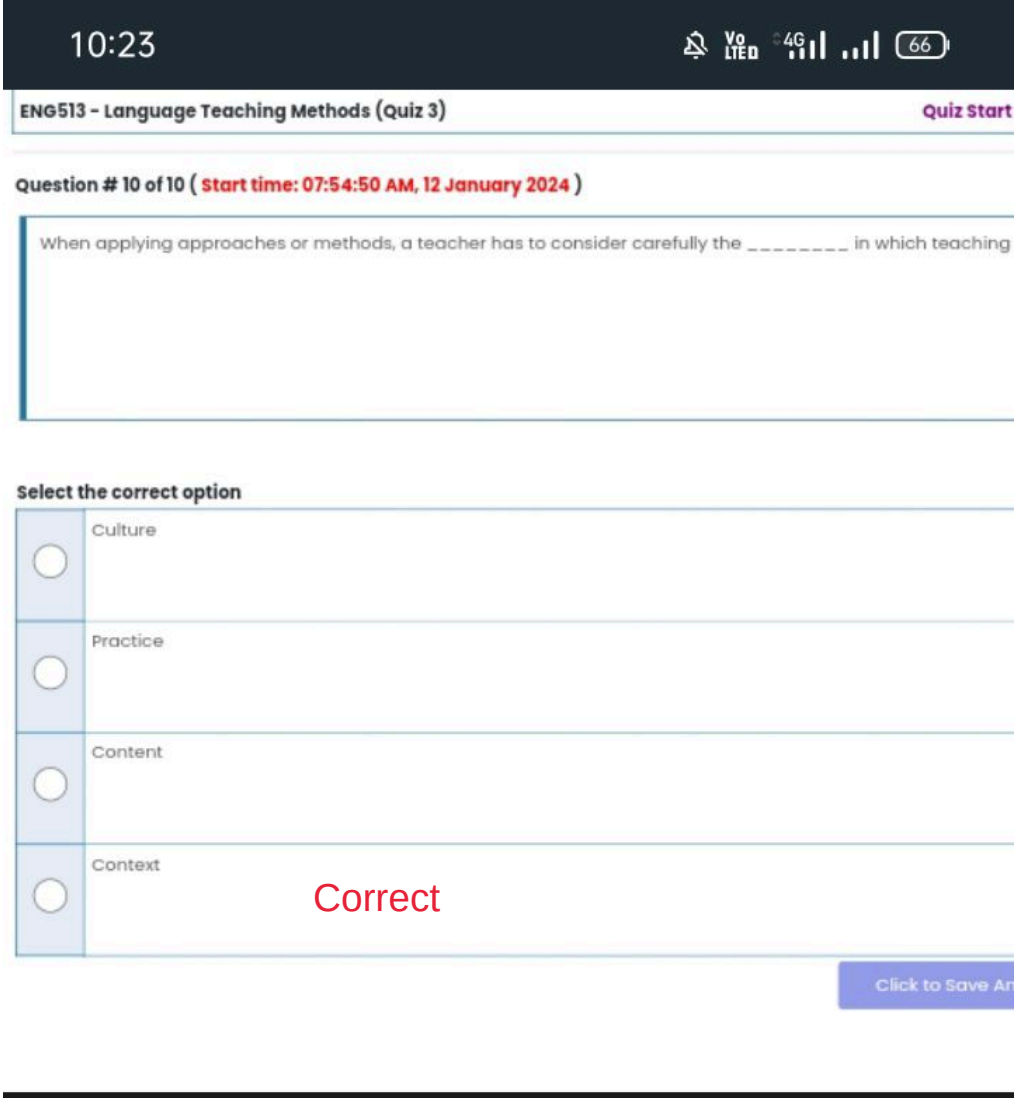

- Listing
- Ordering and sorting
- Comparing
- Problem solving
- Sharing personal experiences
- Creative tasks

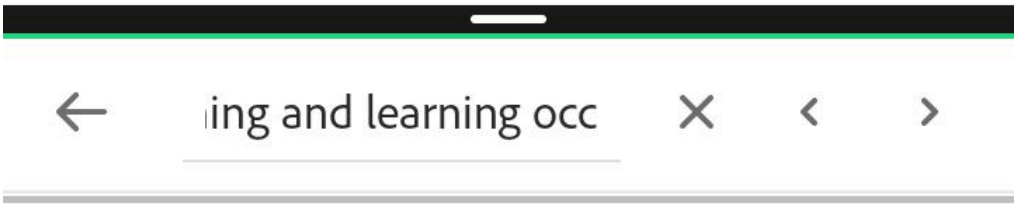

Pica, Kanagy, and Falodun (1993) classify tasks according to the type of interaction that occurs in task accomplishment and give the following classification:

1. Jigsaw tasks: These involve learners combining different pieces of information to form a whole (e.g., three individuals or groups may have three different parts of a story and have to piece the story together).
2. Information-gap tasks: One student or group of students has one set of information and another student or group has a complementary set of information. They must negotiate and find out what the other party's information is in order to complete an activity.
3. Problem-solving tasks: Students are given a problem and a set of information. They must arrive at a solution to the problem. There is generally a single resolution of the outcome.
4. Decision-making tasks: Students are given a problem for which there are a number of possible outcomes and they must choose one through negotiation and discussion.
5. Opinion exchange tasks: Learners engage in discussion and exchange of ideas. They do not need to reach agreement.

Other characteristics of tasks have also been described, 'such as the following:

1. **One-way or two-way:** whether the task involves a one-way exchange of information or a two-

often little room for the teacher's own personal initiative and teaching style. The teacher must submit herself or himself to the method.

S.Q

Role of Contextual Factors

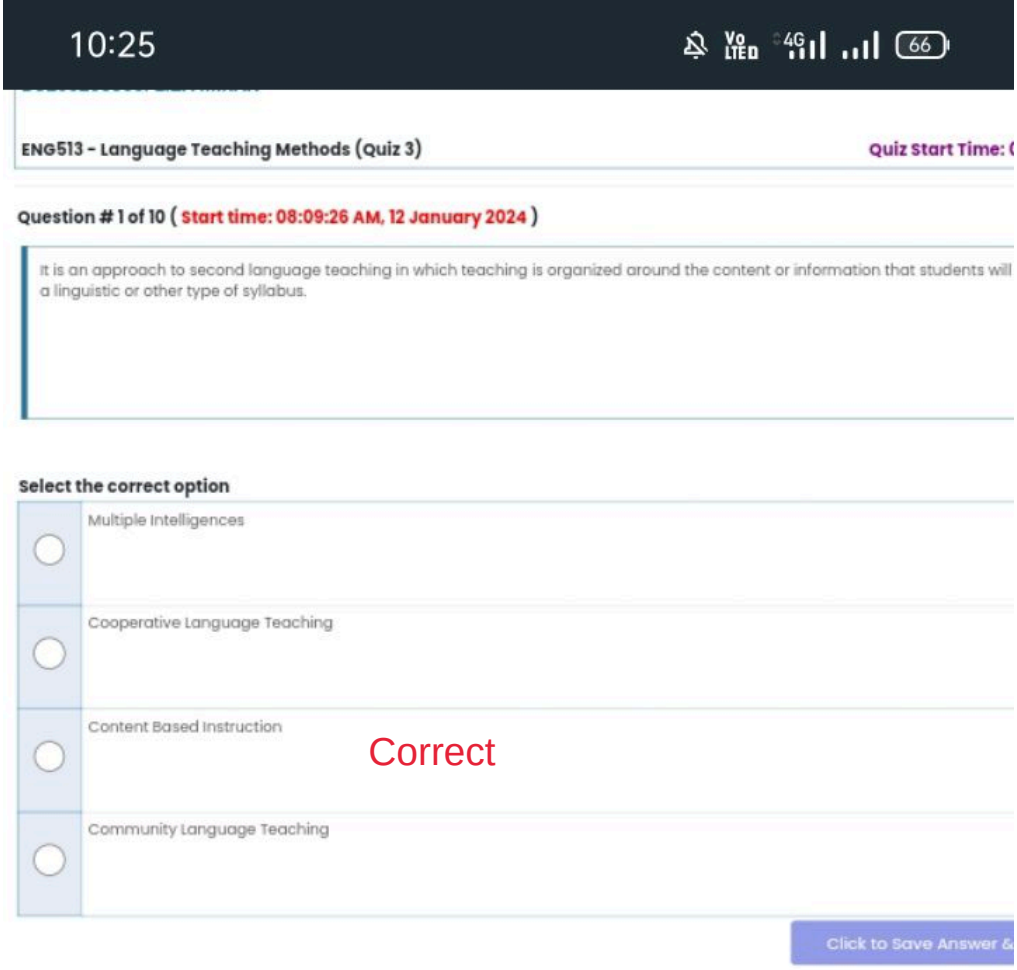

mcq

Both approaches and methods are often promoted as all-purpose solutions to teaching problems that can be applied in any part of the world and under any circumstance. In trying to apply approaches or methods, teachers sometimes ignore what is the starting point in language program design, namely, a careful consideration of the context in which teaching and learning occurs, including the cultural context, the political context, the local institutional context, and the context constituted by the teachers and learners in their classrooms.

For example, attempts to introduce Communicative Language Teaching in countries with very different educational traditions from those in which CLT was developed (Britain and the United States and other English-speaking countries) have sometimes been described as "cultural imperialism" because the assumptions and practices implicit in CLT are viewed as "correct" whereas those of the target culture are seen in need of replacement. Similarly, Counseling-Learning and Cooperative Learning both make assumptions about the roles of teachers and learners that are not necessarily culturally universal.

The need for curriculum development processes Curriculum planners view debates over teaching method as part of a broader set of educational planning decisions. These traditionally involve:

- The careful examination, drawing on all available sources of knowledge and informed judgment.

around the content

Lesson-21

CONTENT-BASED INSTRUCTION

Topic-101: Background of Content-Based Instruction

mcq Content-Based Instruction (CBI) refers to an approach to second language teaching in which teaching is organized around the content or information that students will acquire, rather than around a linguistic or other type of syllabus. Krahnke offers the following definition:

It is the teaching of content or information in the language being learned with little or no direct or explicit effort to teach the language separately from the content being taught. (Krahnke, 1987, p. 65).

The term content has become a popular one both within language teaching and in the popular media. New York Times columnist and linguistic pundit William Safire addressed it in one of his columns in 1998 and noted:

If any word in the English language is hot and buzz-worthy, surpassing even millennium in general discourse, that word is content. (New York Times, August 19, 1998, 15) Although content is used with a variety of different meanings in language teaching, it most frequently refers to the substance or subject matter that we learn or communicate through language rather than the language used to convey it. Attempts to give priority to meaning in language teaching are not new. Approaches encouraging demonstration, imitation, miming, those recommending the use of objects, pictures, and audio-visual presentations, and proposals supporting translation, explanation, and definition as aids to understanding meaning have appeared at different times in the history of language teaching. Brinton, Snow, and Wesche (1989) propose that Saint Augustine was an early

SLEP

immigration bureaucracies, finding accommodations, shopping, finding a job, and so forth. The methodology of the Australian on-arrival courses was based on the Direct Method (Ozolins 1993) but included role play and simulations based on the language needed to function in specific situations. In current on-arrival programs, a competency-based approach is often used in which a teaching syllabus is developed around the competencies learners are presumed to need in different survival situations.

mcq Programs for Students with Limited English Proficiency (SLEP) are governmentally mandated programs to serve especially those children whose parents might be served by the on-arrival programs, but more generally designed to provide in-class or pullout instruction for any school-age children whose language competence is insufficient to participate fully in normal school instruction. Early versions of such programs were largely grammar-based. More recent SLEP programs focus on giving students the language and other skills needed to enter the regular school curriculum. Such skills often involve learning how to carry out academic tasks and understand academic content through a second language.

Language for Specific Purposes (LSP) is a movement that seeks to serve the language needs of learners who need language in order to carry out specific roles (e.g., student, engineer, technician, and nurse) and who need to acquire content and real-world skills through the medium of a second language rather than master the language for its own sake. LSP has focused particularly on English for Science and Technology (EST). An institution offering English for Science and Technology courses would have specialized courses to support its clients in learning to read technical articles in computer science or to write academic papers in chemical engineering. LSP/EST have given rise to a number of subfields, such as ESP (English for Specific Purposes), EOP (English for Occupational Purposes), and EAP (English for Academic Purposes).

Content-based courses are now common in many different settings and content is often used as the organizing principle in ESL/EFL courses of many different kinds. Now we will examine the principles underlying Content-Based Instruction and how these are applied in language teaching

ENG513 - Language Teaching Methods (Quiz 3)

Question # 3 of 10 (Start time: 08:11:04 AM, 12 January 2024)

ENG513 - Language Teaching Methods (Quiz 3)

Question # 4 of 10 (Start time: 08:12:02 AM, 12 January 2024)

The teachers need to be able to use approaches and methods on their own judgment and experience in a ____

Select the correct option

- firm
- inflexible
- flexible

Correct

- stern

Click t

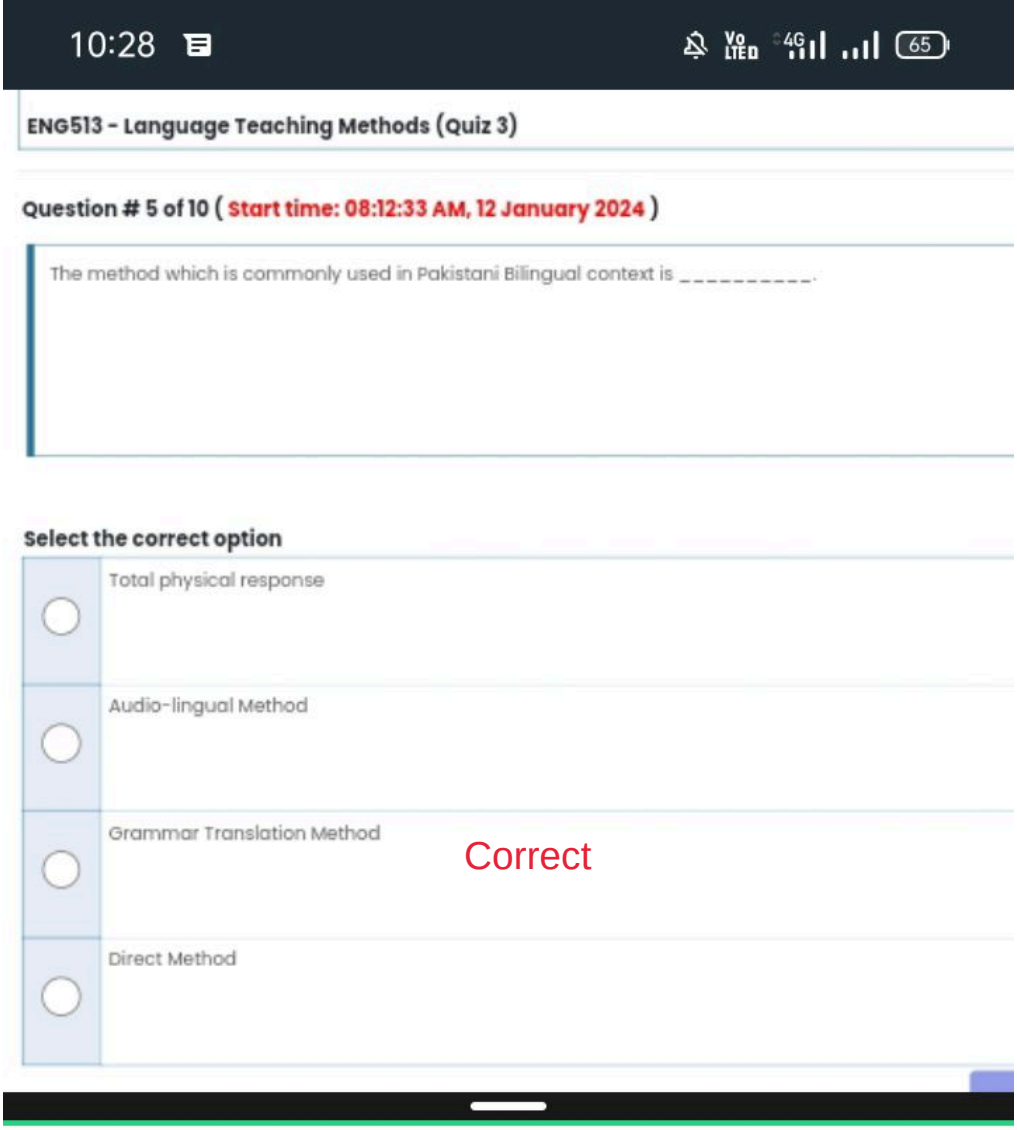

gment and experienc

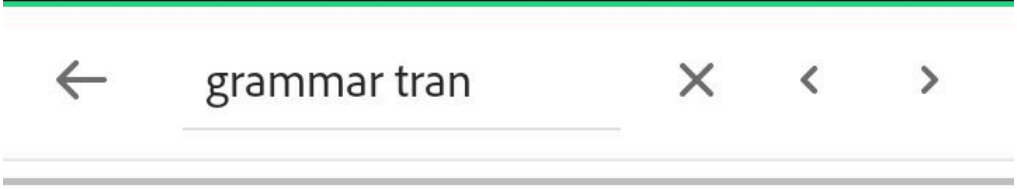

- to learn how to use different approaches and methods and understand when they might be useful
- to understand some of the issues and controversies that characterize the history of language teaching
- to participate in language learning experiences based on different approaches and methods as a basis for reflection and comparison
- to be aware of the rich set of activity resources available to the imaginative teacher
- to appreciate how theory and practice can be linked from a variety of different perspectives

However, teachers and teachers in training need to be able to use approaches and methods flexibly and creatively based on their own judgment and experience. In the process, they should be encouraged to trans- form and adapt the methods they use to make them their own. Training in the techniques and procedures of a specific method is probably essential for novice teachers entering teaching, because it provides them with the confidence they will need to face learners and it pro techniques and strategies for presenting lessons. In the early stages, teaching is largely a ma applying procedures and techniques developed by others. An approach or a predetermined m with its associated activities, principles, and techniques, may be an essential starting point for an inexperienced teacher, but it should be seen only as that. As the teacher gains experience and knowledge, he or she will begin to develop an individual approach or personal method of teaching, one that draws on an established approach or method but that also uniquely reflects the teacher's individual beliefs, values, principles, and experiences. This may not lead to abandonment of the approach or method the teacher started out using but will lead to a modification of it as the teacher adds, modifies, and adjusts the approach or method to the realities of the classroom. In developing a personal approach to teaching, a primary reference point for the teacher is his or her personal beliefs and principles with regard to the following:

206

- his or her role in the classroom

Issues of Linguistic Identity and Power

The issues of language and power run as a common thread throughout the history of Pakistan. improvement over Grammar Translation. In the 1950s the Audio-lingual Method was thought to provide a way forward, incorporating the latest insights from the sciences of linguistics and psychology. As the Audio-lingual Method began to fade in the 1970s, particularly in the United States, a variety of guru-led methods emerged to fill the vacuum created by the discrediting of Audio-lingual ism, such as the Silent Way, Total Physical Response, and Suggestopedia. While these had declined substantially by the 1990s, new "breakthroughs" continued to be announced from time to time, such as Task-Based Instruction, Neurolinguistic Programming, and Multiple Intelligences, and these-attract varying levels of support. Mainstream language teaching on both sides of the Atlantic, however, opted for Communicative Language Teaching (CLT) as the recommended basis for language teaching methodology in the 1980s and it continues to be considered the most plausible basis for language teaching even today, although, CLT is today understood to mean little more than a set of very general principles that can be applied and interpreted in a variety of ways.

- the cognitive operations required and the resources available
- the accountability system involved

Topic-107: Theory of Language and Learning behind Task-Based Language Teaching

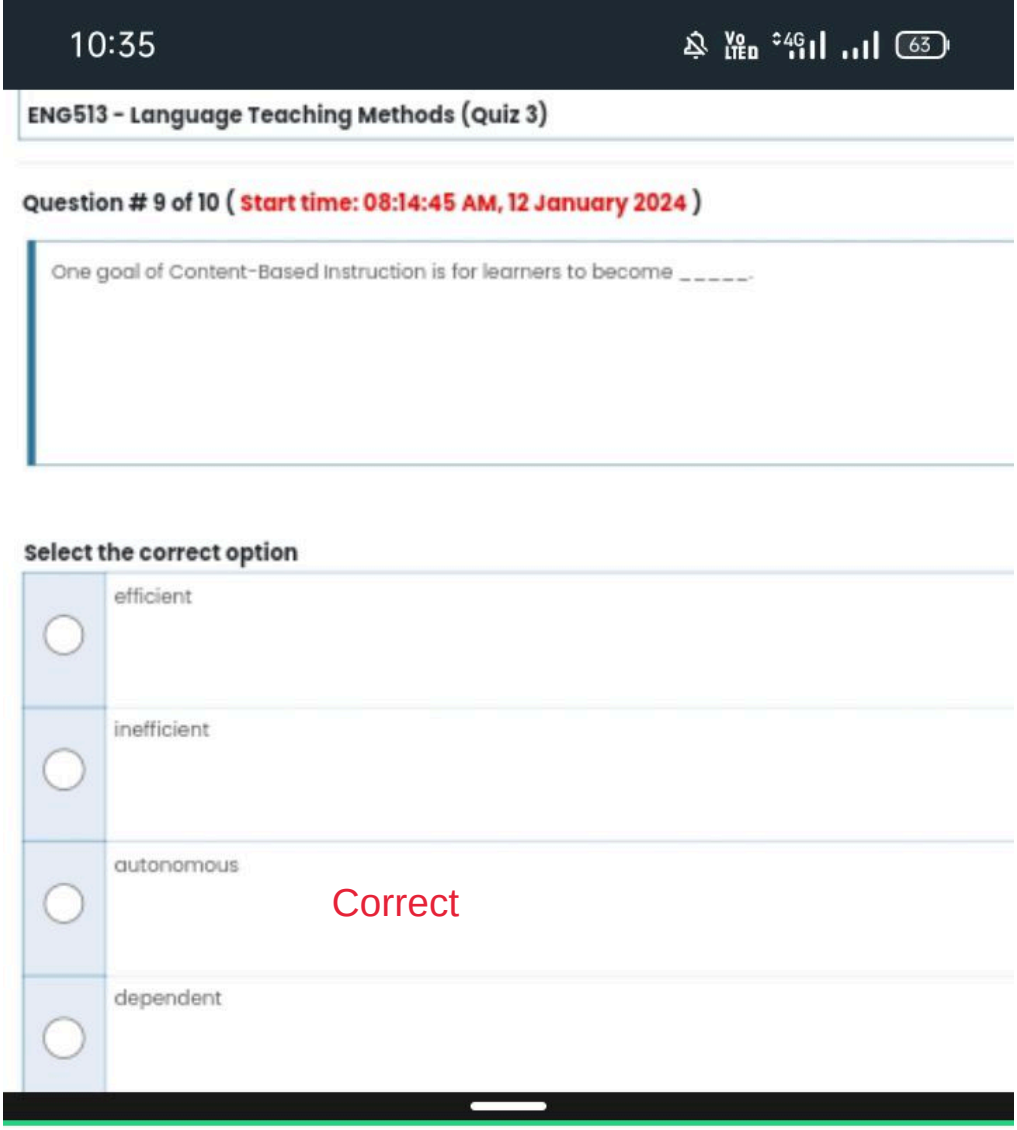

mcq TBLT is primarily motivated by a theory of learning rather than a theory of language. However, several assumptions about the nature of language can be said to underlie current approaches to TBLT. These are:

Language is Primarily a Means of Making Meaning

In common with other realizations of communicative language teaching, TBLT emp... central role of meaning in language use. Skehan notes that in task-based instruction (TBI), ... is primary the assessment of the task in terms of outcome" and that task-based instruction is not "concerned with language display" (Skehan, 1998, p. 98).

187

©Copyright Virtual University of Pakistan

r learners to become

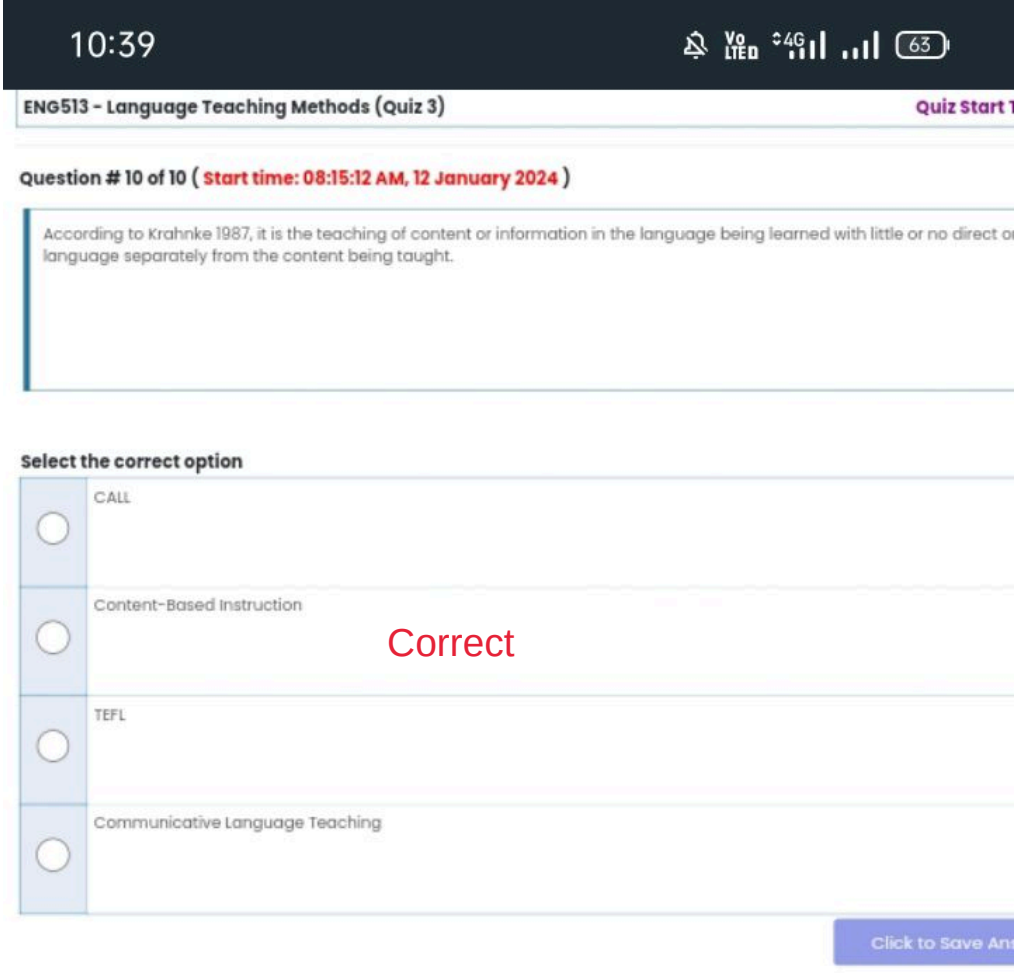

Topic-105: Role of Learners, Teachers and Materials in Content-Based Instruction

Learner Roles

mcq One goal of CBI is for learners to become autonomous so that they come to "understand their own learning process and take charge of their own learning from the very start" (Stryker and Leaver 1993, p. 286). In addition, most CBI courses anticipate that students will support each other in collaborative modes of learning. This may be a challenge to those students who are accustomed to more whole-class or independent learning and teaching modes. CBI is in the "learning by doing" school of pedagogy. This assumes an active role by learners in several dimensions. Learners are expected to be active interpreters of input, willing to tolerate uncertainty along the path of learning, willing to explore alternative learning strategies, and willing to seek multiple interpretations o and written texts.

Learners themselves may be sources of content and joint participants in the selection of topics and activities. Such participation "has been found to be highly motivating and has resulted in a course changing its direction in order to better meet the needs of students" (Stryker and Leaver 1993, p. 11). Learners need commitment to this new kind of approach to language learning, and CBI advocates warn that some students may not find this new set of learner roles to their liking and may be less than ready and willing participants in CBI courses. Some students are overwhelmed by the quantity of new information in their CBI courses and may flounder. Some students are reported to have experienced frustration and have asked to be returned to more structured, traditional classrooms. Students need to be prepared both psychologically and cognitively for CBI and, if they are not adequately primed, 'then "missing schemata needs to be provided or students need to be kept from enrolling until they are `ready' " (Stryker and Leaver, 1993, p. 292).

The Role of Teachers

krahn

Lesson-21

CONTENT-BASED INSTRUCTION

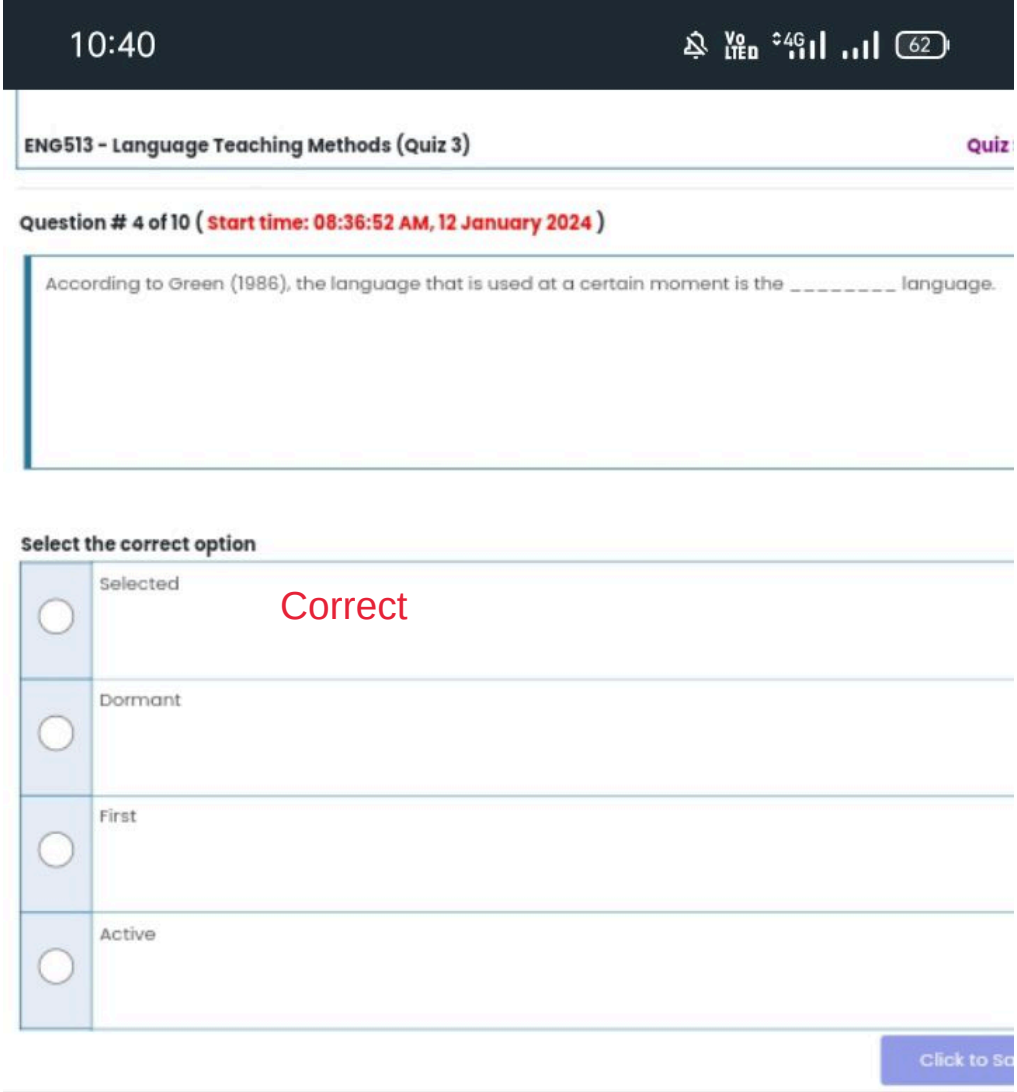

Topic-101: Background of Content-Based Instruction

mcq Content-Based Instruction (CBI) refers to an approach to second language teaching in which teaching is organized around the content or information that students will acquire, rather than around a linguistic or other type of syllabus. Krahnke offers the following definition:

It is the teaching of content or information in the language being learned with little or no direct or explicit effort to teach the language separately from the content being taught. (Krahnke, 1987, p. 65).

The term content has become a popular one both within language teaching and in the popular media. New York Times columnist and linguistic pundit William Safire addressed it in one columns in 1998 and noted:

If any word in the English language is hot and buzz-worthy, surpassing even millennium in general discourse, that word is content. (New York Times, August 19, 1998, 15) Although content is used with a variety of different meanings in language teaching, it most frequently refers to the substance or subject matter that we learn or communicate through language rather than the language used to convey it. Attempts to give priority to meaning in language teaching are not new. Approaches encouraging demonstration, imitation, miming, those recommending the use of objects, pictures, and audio-visual presentations, and proposals supporting translation, explanation, and definition as aids to understanding meaning have appeared at different times in the history of language teaching. Brinton, Snow, and Wesche (1989) propose that Saint Augustine was an early proponent of Content-Based Language Teaching and quote his recommendations regarding focus on meaningful content in language teaching. Kelly's history of language teaching cites a number of such meaning-based proposals (Kelly, 1969). Content-Based Instruction likewise draws on the principles of Communicative Language Teaching, as these emerged in the 1980s. If, as it was argued,

green (

are dissimilar; and the type of organization may change with developing proficiency. In other words, there is a clear need for a more dynamic model that can take into accounts all these different factors, some of which are continuously changing. In view of this observation, the activation metaphor seems to be the most attractive alternative, as the level of activation can continuously change for each individual lexical item.

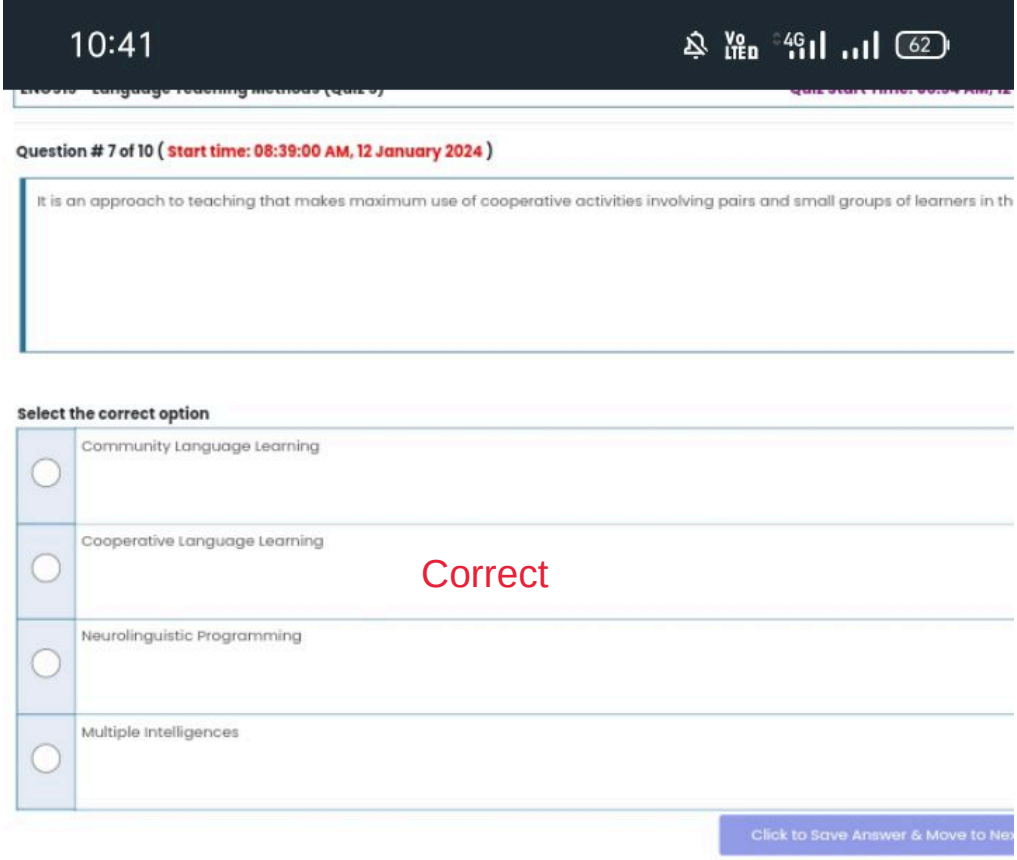

.Q **Can Languages be switched On and Off?**

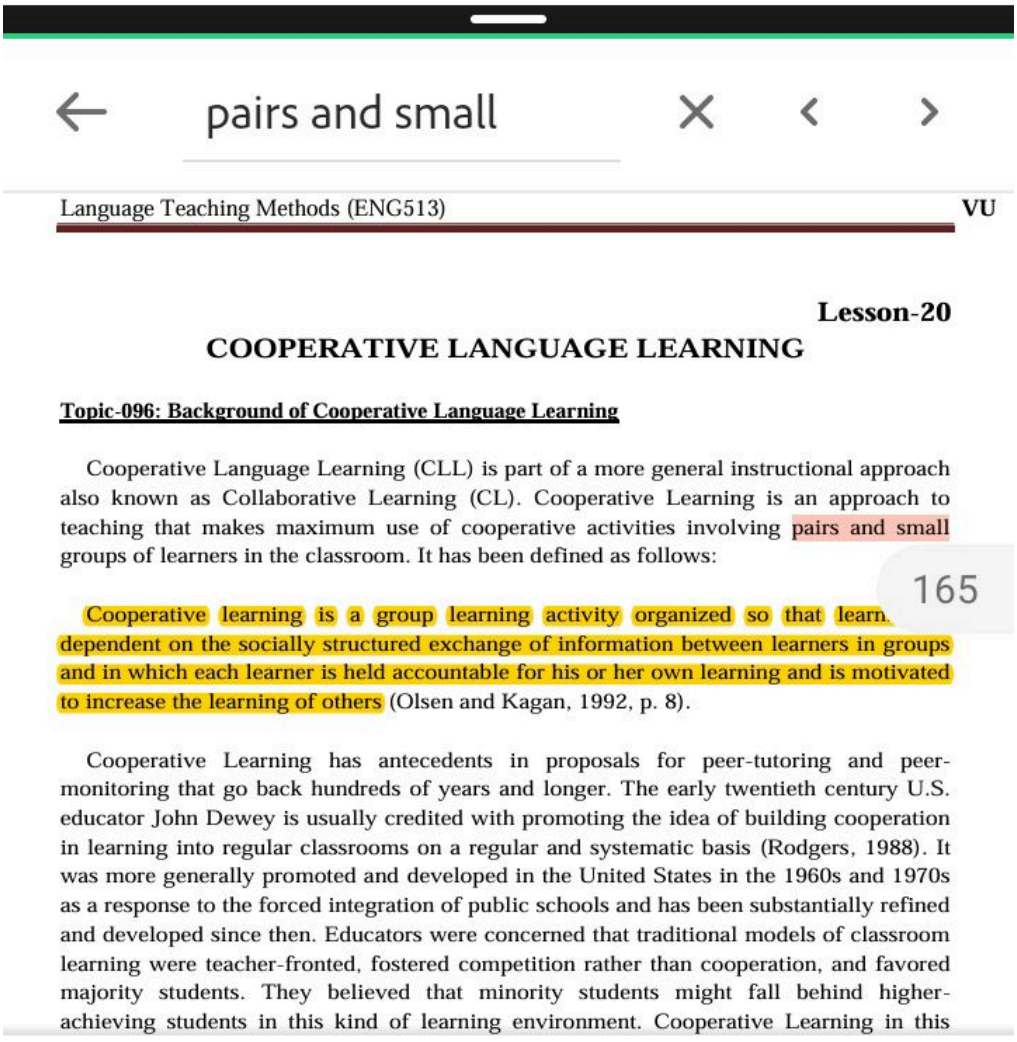

The second question, whether separate languages (or language subsets) can be switched on or off, has an equally long history of answers. An influential proposal was that of Green (1986), who proposed three states in which languages can be at a certain moment in time: selected, active and dormant. The language that is used at a certain moment is the selected language; languages that, at that particular moment, play a role in the background are labeled active languages that do not play a role at that moment is dormant. The assumption of the middlemost level that of the active language is required by the observation that when speaking a particular language, a speaker may use words from another language, either because that word is more appropriate or because the speake

COOPERATIVE LANGUAGE LEARNING
Topic-096: Background of Cooperative Language Learning
Cooperative Language Learning (CLL) is part of a more general instructional approach also known as Collaborative Learning (CL). Cooperative Learning is an approach to teaching that makes maximum use of cooperative activities involving pairs and small groups of learners in the classroom. It has been defined as follows:
165
Cooperative learning is a group learning activity organized so that learn
dependent on the socially structured exchange of information between learners in groups and in which each learner is held accountable for his or her own learning and is motivated to increase the learning of others (Olsen and Kagan, 1992, p. 8).
Cooperative Learning has antecedents in proposals for peer-tutoring and peer-monitoring that go back hundreds of years and longer. The early twentieth century U.S. educator John Dewey is usually credited with promoting the idea of building cooperation in learning into regular classrooms on a regular and systematic basis (Rodgers, 1988). It was more generally promoted and developed in the United States in the 1960s and 1970s as a response to the forced integration of public schools and has been substantially refined and developed since then. Educators were concerned that traditional models of classroom learning were teacher-fronted, fostered competition rather than cooperation, and favored majority students. They believed that minority students might fall behind higher-achieving students in this kind of learning environment. Cooperative Learning in this

had hoped for. Nevertheless, subject-matter texts appeared that included exercises dealing with language practice, and the need for collaboration between subject- matter teachers and language teachers was emphasized. In some cases, curricular material was produced that integrated subject matter and language teaching goals, such as the Singaporean Primary Pilot Project in the 1970s classroom texts integrating science, math, and language study. Immersion Education has also had a strong influence on the theory of Content-Based Instruction. Immersion Education is a type of foreign language instruction in which the regular school curriculum is taught through the medium of the foreign language. The foreign language is the vehicle for content instruction; it is not the subject of instruction. Thus, for example, an English-speaking child might enter a primary school in which the medium of instruction for all the content subjects is French. Student goals of an immersion program include: (1) developing a high level of proficiency in the foreign language; (2) developing positive attitudes toward those who speak the foreign language and toward their culture(s); (3) developing English language skills commensurate with expectations for a student's age and abilities; (4) gaining designated skills and knowledge in the content areas of the curriculum.

175

The first immersion programs were developed in Canada in the 1970s to provide English-speaking students with the opportunity to learn French. Since that time, immersion programs have been adopted in many parts of North America, and alternative forms of immersion have been devised. In the United States, immersion programs can be found in a number of languages, including French, German, Spanish, Japanese, and Chinese.

Immigrant On-Arrival Programs typically focus on the newly arrived immigrants in a country and their need for survival. Such learners typically need to learn how to deal with differing kinds of

form of instru

influence on teaching.

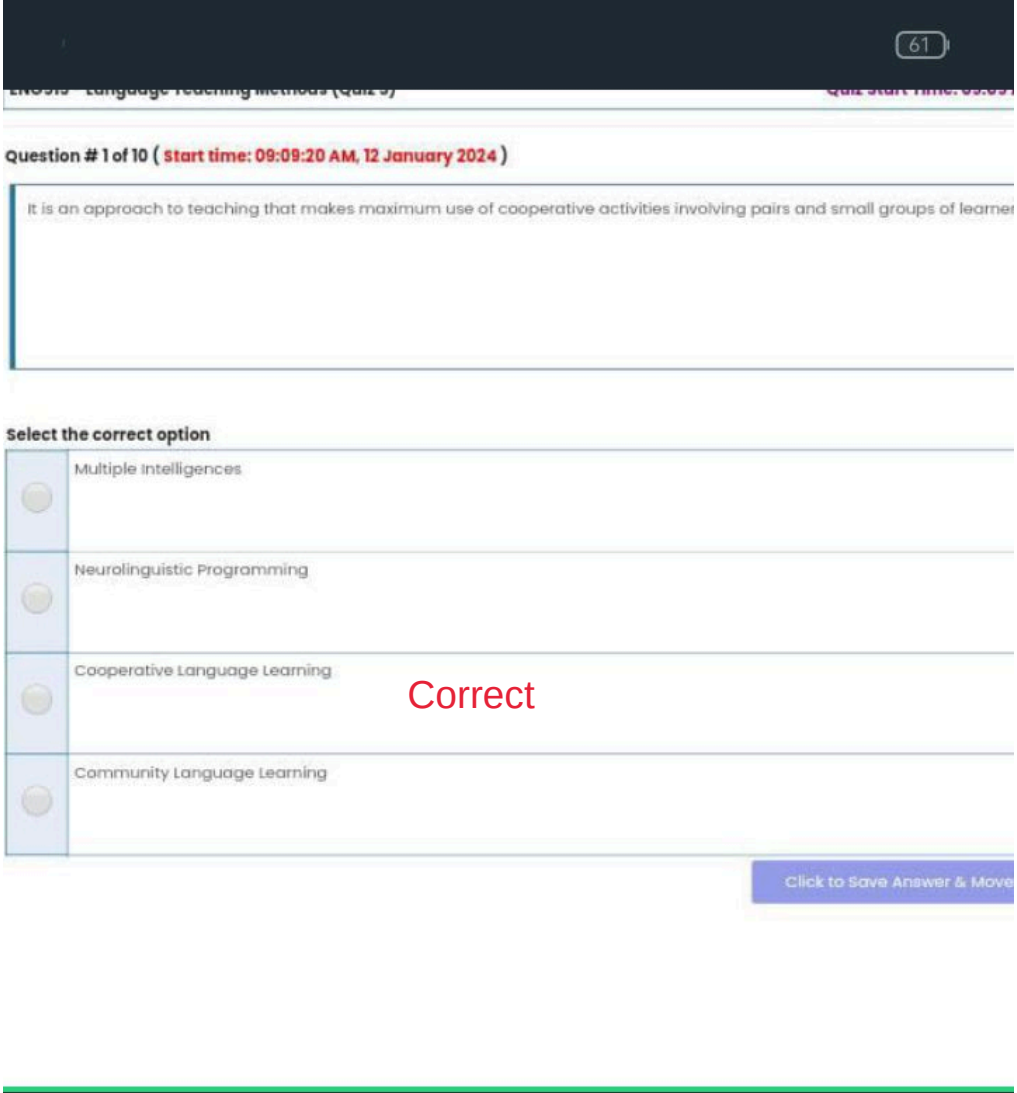

Gurus' innovations: Teaching has sometimes been described as artistry rather than science and is often shaped by the influence of powerful individual practitioners with their own schools of thought and followers. Just as Gattegno, Lozanov, and Krashen inspired a number of teachers in the 1970s and 1980s, and as Gardner does today, so doubtless new gurus will attract disciples and shape teaching practices in the future.

Responses to technology: The potential of the Internet, the World Wide Web, and other computer interfaces and technological innovations is likely to capture the imagination of the teaching profession in the future as it has in the past and will influence both the content and the form of instructional delivery in language teaching.

Influences from academic disciplines: Disciplines such as linguistics, psycho linguistics, and psychology have an impact on the theories of language and language learning. They support particular approaches to language teaching. As new theories emerge in such disciplines, t likely to have an impact on theories of teaching and learning in future. Just as in the pas lingualism and Cognitive Code Learning reflected linguistic theories of that period, so new i from functional linguistics, corpus linguistics, psycho linguistics, or sociolinguistics, or from unknown sources, may play a dominant role in shaping language pedagogy. Research influences second language teaching and learning as a a field for intensive study and theorizing. Second language acquisition research provided motivation for the development of the Natural Approach and

Lesson-20

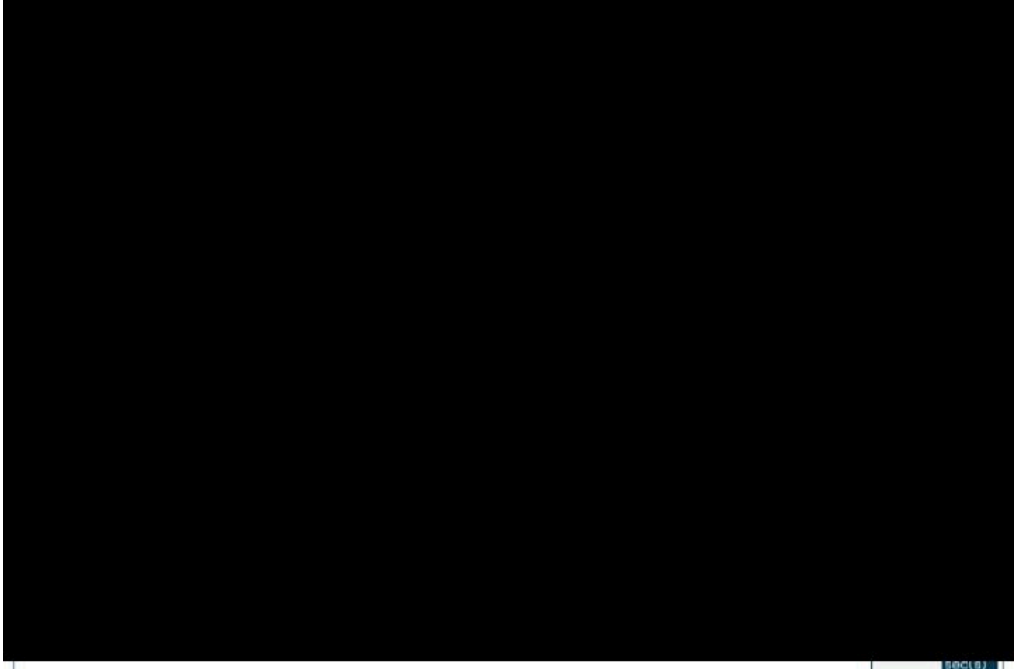

COOPERATIVE LANGUAGE LEARNING

Topic-096: Background of Cooperative Language Learning

Cooperative Language Learning (CLL) is part of a more general instructional approach also known as Collaborative Learning (CL). Cooperative Learning is an approach to teaching that makes maximum use of cooperative activities involving pairs and small groups of learners in the classroom. It has been defined as follows:

Cooperative learning is a group learning activity organized so that learn dependent on the socially structured exchange of information between learners in and in which each learner is held accountable for his or her own learning and is moti to increase the learning of others (Olsen and Kagan, 1992, p. 8).

Cooperative Learning has antecedents in proposals for peer-tutoring and peer-monitoring that go back hundreds of years and longer. The early twentieth century U.S. educator John Dewey is usually credited with promoting the idea of building cooperation in learning into regular classrooms on a regular and systematic basis (Rodgers, 1988). It was more generally promoted and developed in the United States in the 1960s and 1970s as a response to the forced integration of public schools and has been substantially refined and developed since then. Educators were concerned that traditional models of classroom learning were teacher-fronted, fostered competition rather than cooperation, and favored majority students. They believed that minority students might fall behind higher-achieving students in this kind of learning environment. Cooperative Learning in this context sought to do the following:

LANGUAGE TEACHING METHODS FOR BILINGUALS

Topic-116: The Multilingual Mind

If we want to understand how people acquire or learn a second language, we need to know how information, especially in different languages, is processed in the human brain. New techniques, like brain scans and the use of electrodes to investigate brain activity (ERP) have shed light on language processing. The most important insight explains that language processing is a complex interaction of a wide range of factors. It is not possible to look into a person's brain to study what happens and know how different factors interact? However, it can be understood that what are the different factors that affect multilingual processing? For this information we have to depend on metaphors and models of language processing that can subsequently be tested. In this unit, we start with a familiar, general processing model (Levelt, 1993) and work towards a dynamic model of the multilingual lexicon. Then we will explain the implications of this model for SLA.

mcq

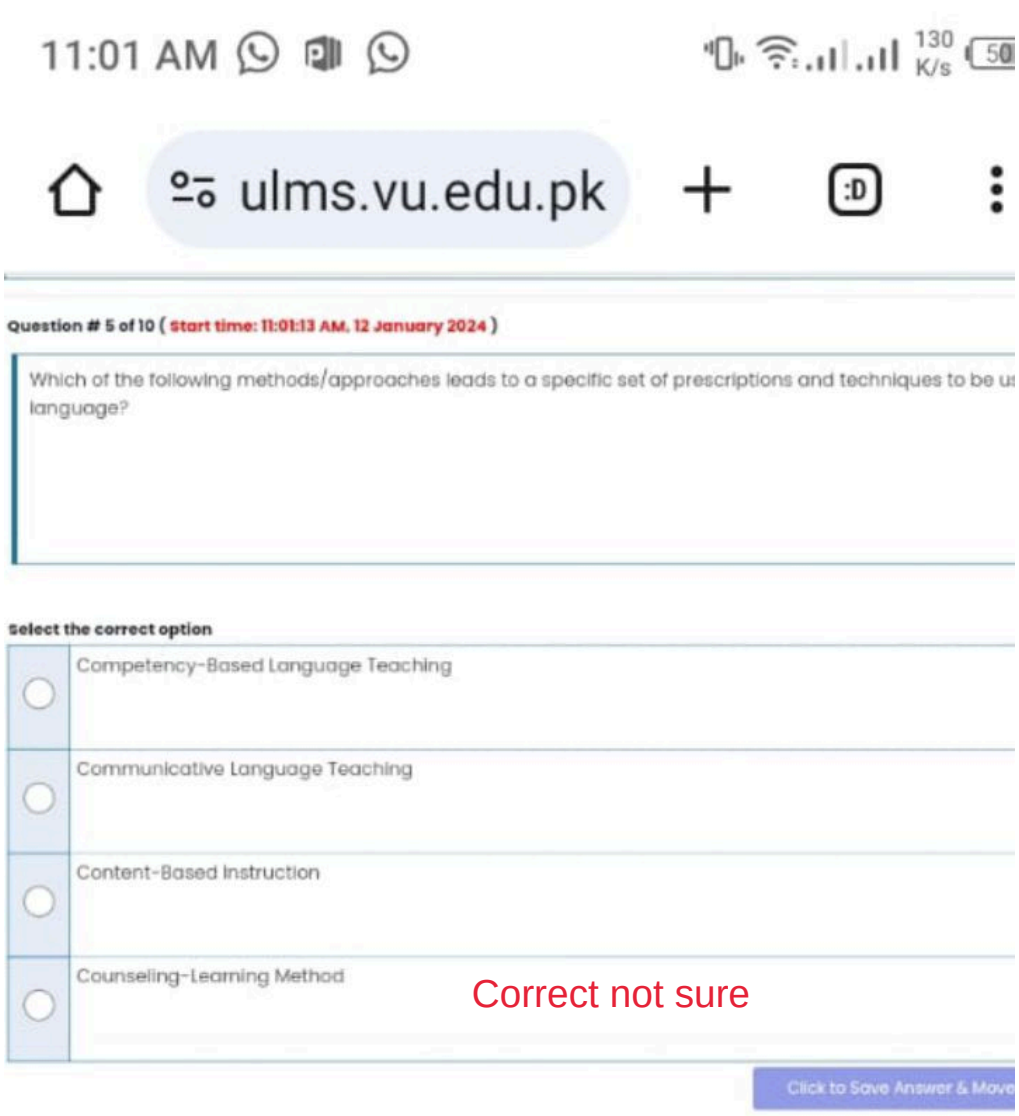

Topic-117: A General Language Processing Model

211

There are different 'steps' involved in speaking. When a person wants to express an idea, s/he has to find words for that idea, put those words in a well formed sentence, pronounce the words in the right order, and thousands of tiny muscles co-ordinate in this activity. To get understanding of this complexity of speech processing, Levelt's speaking blueprint (Levelt, 1993; Levelt, 1989) can be considered the most complete and accepted one for a monolingual speakers. According to this model (see Figure A4.1), the production of speech takes place in three relatively distinct stages: the Conceptualiser, the Formulator and the Articulator.

Task A4.1

Even though you are not familiar with the model yet, can you think of how the different steps are
