Question # 1 of 10 (Start time: 10:20:12 AM, 05 July 2024)

Which of the following is an activity which required learners to arrive at an outcome through the process of thought?

Select the correct option

- Assessment
- Test
- Task
- Unit

Click to Save Answer &

process of tho

When we talk about classroom implementation, the element of LCD is very important. We think about various language learning tasks that are brought by teachers in classrooms. These language tasks are discussed in the perspective of Michael Breen's ideas (1984). Before looking into language learning tasks, it is important to understand the term 'task' in relation to the promotion of knowledge and skills in second language. It is also important to see the impact of tasks on learning second language in their own language teaching context.

A task was defined as an activity which required learners to arrive at an outcome from the given information through the process of thought, and which allowed teachers to control and regulate that process.

Tasks have much more efficacy in terms of promoting knowledge, capabilities and skills among second language learners. Dividing the units into tasks is more useful in order to teach better understanding of the concepts. For example, rather than just teaching about verb or noun, teachers can make different tasks for students where they can learn better while performing them. These t
just for language learning rather they promote knowledge through language. Michael
considered tasks as the springboard for knowledge and capabilities. Tasks give us the libert
meaning based and focused learning.

138

The quality of a task could be evaluated in terms of how it offers means for learning, and new ways for promoting knowledge. There are different means of criteria of task as projected by Breen: 1) How it addresses learners' definition of progress? 2) Are learners progressive to the demands of a target language? 3) How the tasks are open to diversity and change? Tasks can promote knowledge, skills and capabilities only if the learners are open to accept change and diversity and are more responsive towards needs, wants and challenges.

Topic-194: Evaluation Cycle for Language Tasks

This topic will discuss the three phases of 'task' as presented by Breen. It is important that teachers use task-based language teaching techniques and divide them into different phases in their own teaching

10:22

Question # 2 of 10 (Start time: 10:21:28 AM, 05 July 2024)

Which of the following eras paved the way for audiolingualism and cognitivism?

Select the correct option

- Method
- Grammar
- Modern
- Global

paved the way

Stern has made a very interesting point that audiolingualism and cognitivism have changed the direction from language teaching to language learning. In the paradigm shift from language teaching to learning, instead of looking at language learning from the perspective of a method, much more focus is being paid to the learning process.

Topic-197: Limitations of Classroom Research

The classroom research is limited in terms of looking at teacher at grass root level. In order to contextualize this discussion about the limitations of classroom research, Stern believes that it can be seen in the perspective of some of the changes and emphasis on language teaching analysis. For example, the method era paved the way for audiolingualism and cognitivism. This shifted the focus from language teaching to language learning.

The researcher believes that very few efforts have been made in the field of implementing curriculum at classroom level, and it is the teacher who can be trusted with responsibility to implementation. He believes that the findings of classroom research can be related to:

Question # 3 of 10 (Start time: 10:22:32 AM, 05 July 2024)

Which of the following tends to evoke fear in most students?

Select the correct option

- Internship
- Trial
- Test
- Interview

evoke fear

Lesson-31

TESTING, MONITORING AND ASSESSMENT -I

Topic-200: The Role of Testing in Language Curriculum Design

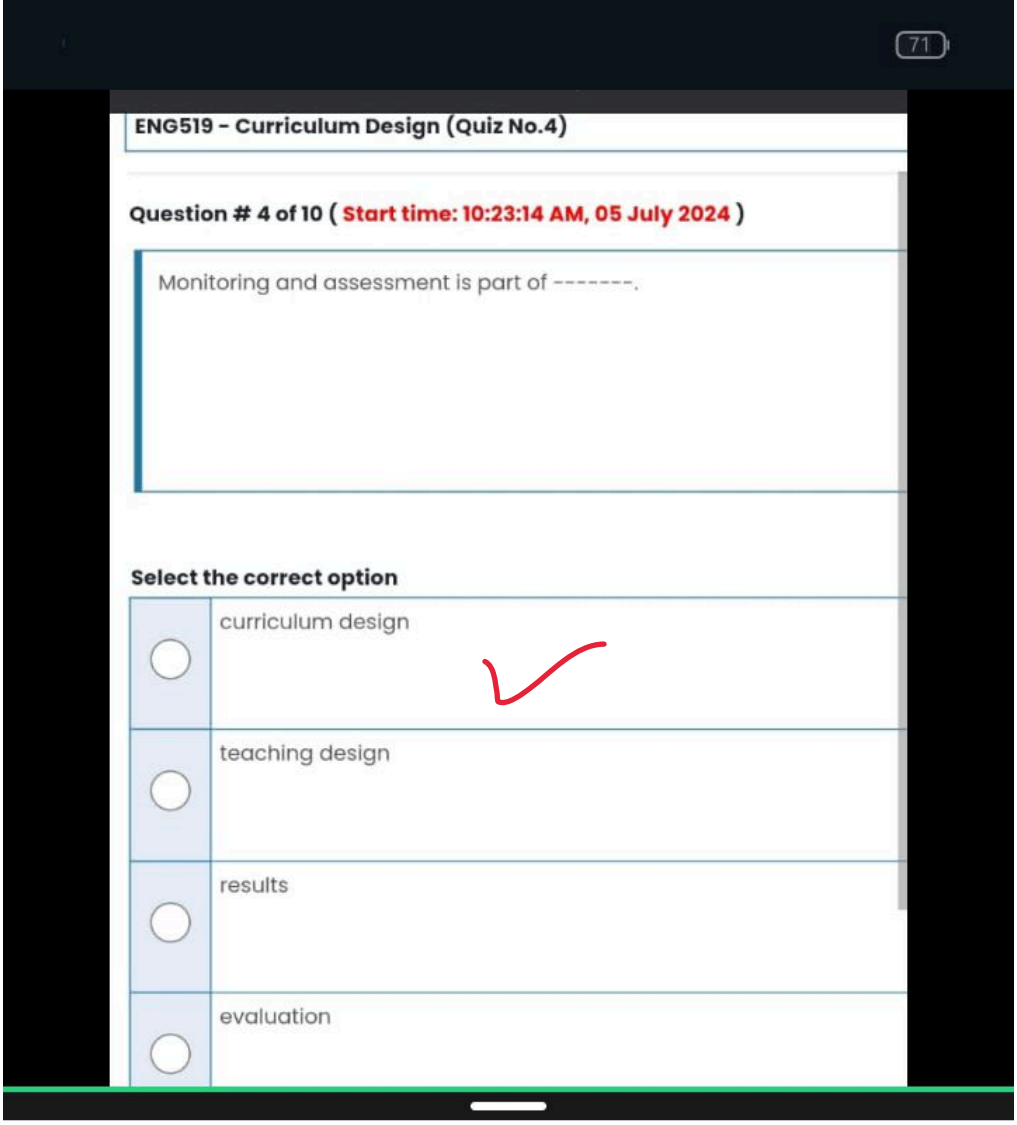

The word 'test' tends to evoke fear in most students, but as a teacher tests help you gather loads of information that enable you to keep your students happy and progressing. Testing is useful before students get started so you know what kind of course to enroll them on, but you can also use tests along the way to check progress and find out if the course was successful in meeting objectives.

When a student makes an inquiry about a course, schools and individual teachers see pound signs flash before their eyes. In reality though, the pounds only materialize if you can deliver the course according to the student needs. So you start off by checking what s/he knows and what s/he needs. One kind of test that's really useful for giving you a head start before you even meet the student is a self-assessment test in which you get the student to analyze how good she is at various aspects of the language, usually by rating herself from 1-5 or by completing sentences.

You can make the test visual by using pictures of different situations in which they may use English (listening to lectures, using the phone and so on) and ask students how comfortable they are in those situations. Rating systems with smiley faces and frowning faces help to convey the point. Set the test out so that it goes from really easy to gradually more difficult and the students can stop when the questions get too tough.

Topic-201: Characteristics of Tests

Some establishments offer each student an interview with a teacher, which is basically a test. It's really time-consuming to do this but at least you can get a real view of the student's speaking ability,

considerably. However, when you assess students in this way, it's easier to produce a final report at the end of the course rather than just a test score.

Topic-203: Guidelines for Monitoring and Assessment

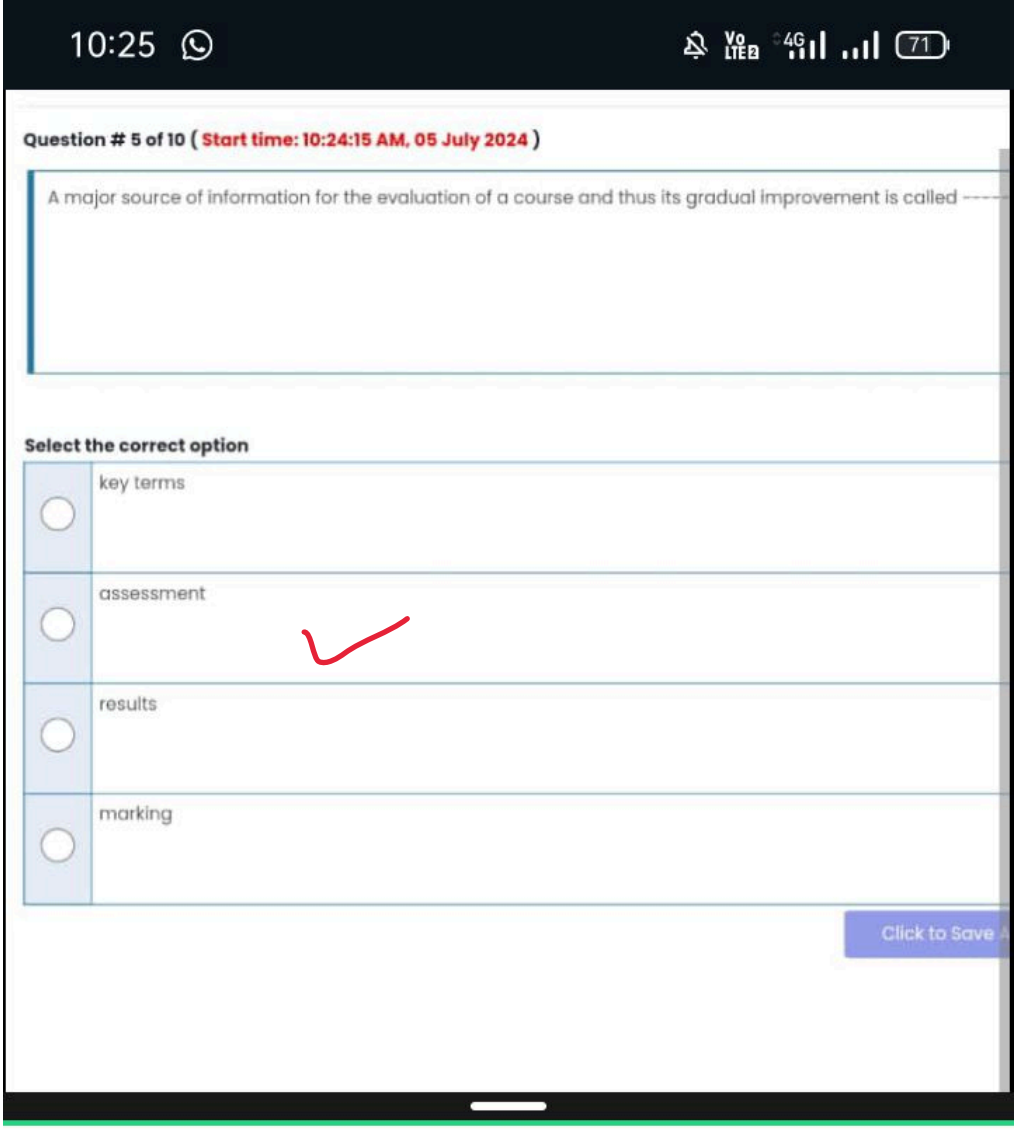

Assessment is a major source of information for the evaluation of a course and thus its gradual improvement. Assessment also contributes significantly to the teacher's and learners' sense of achievement in a course and thus is important for motivation. It is often neglected in curriculum design and courses are less effective as a result. Curriculum design should include the planning of a well-thought-out programme of assessment of various kinds.

The aim of this part of the curriculum design process is to decide what to test and how to test it. The outer circles of the curriculum design model (environment, needs and principles) provide data to guide the planning of the processes in the inner circle. Thus, monitoring and assessment must take account of the environment in which the course will be used, the needs of the learners, and principles of teaching and learning. Monitoring and assessment can provide a teacher and learners with information about the learners' present knowledge and progress, and it can also be a means of encouraging involvement and participation

Topic 204: Types of Monitoring and Assessment

The purpose of the monitoring and assessment part of curriculum design is to make sure that the learners will get the most benefit from the course. This involves carefully observing the learners and the course, and suggesting changes to the course and the way it is run. Assessment may also simply be expected to be a normal part of curriculum design. The person designing the course may also be expected to design the assessment for the course. Let us look at the major types of monitoring and assessment that can occur as part of a course:

desire

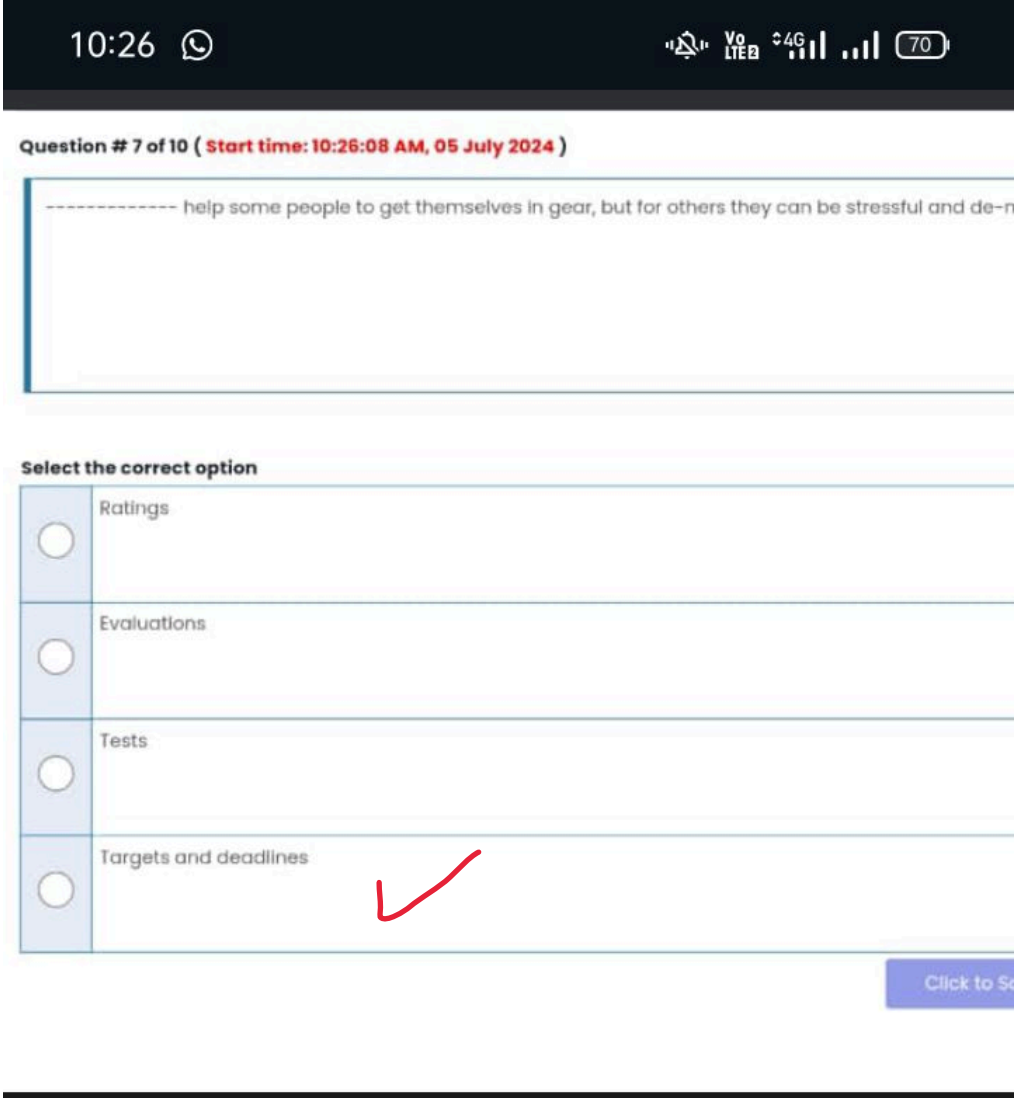

opportunity, and the teacher is not in the front, running the show.

Topic-199: Classroom Implementation

To sum up the discussion of Stern's notion of 'the wood and tree', we can say that the metaphor helps to see classroom implementation that how it goes into the mind of the student, and how the teacher makes the practice of the curriculum offered by the institutes. Before 1970, language teaching was method driven, and therefore it was also known as method era. But with the arrival of audiolingualism and cognitivism, it moved towards communicative language teaching and the shift occurred from language teaching to language learning. In this regard, there are three categories of classroom implementation:

- Teaching strategies: Although it originates from method debate, but it looks at concrete classroom activities. What strategies are being employed by teachers? There is need to adjust teaching strategy according to the students' desire.
- Timing strategies: It is under the direct control of the teacher. It happens within the premises of the classroom.
- Social or interpersonal strategies

©Copyright Virtual University of Pakistan

in gear

level. A proficiency test assesses a student's ability to perform a particular task or tasks that she'll have to accomplish in the future. So if your student tells you that she's been offered a great job in a restaurant on the condition that her English is up to scratch, you can design a test that covers taking orders and handing complaints. It doesn't really matter whether the student has taken a course before or whether she knows the grammar. You simply need to know how well she may be able to handle that job.

Topic-202: Testing to Establish the Best Course

Once your students are actually enrolled in a course you can continue to use tests to map their progress and measure what you've all achieved. If a course is of a specific length you can build in one or two progress tests at various stages. Progress tests serve a few purposes:

- Providing motivation for the students to study. Targets and deadlines help some people to get themselves in gear, but for others they can be stressful and de-motivating. You need to decide how to present your test so that you strike the right balance.
- Providing a standard level for the class so that students can be changed to a different course that better matches their proficiency level if necessary. Students sometimes ask to be moved up to a higher level and if you, as the teacher, aren't too keen, the results of the progress test may be the basis on which you decide. Likewise if you have to move a student down, you can use the test as evidence for your decision.
- Highlighting gaps in your teaching – or the course materials – that you need to fill. This can be for your own purposes or for the school to monitor its teachers. The danger of this is that you may end up training your class to pass the test rather than teaching them English.

The way you handle the test depends on the importance you attach to it and your main objective. For example, you may tell the students the topic of the test and ask them to revise particular points that you feel are essential to their progress in the rest of the course. On the other hand, you may decide that the class should have a thorough review, so you don't give the students specific details. This makes them revise everything so far. A fun and effective way to organize a progress test is to allow the students to

clear about

- Theoretical approach

Topic-198: Theoretical Framework

Theoretical framework, as projected by Sterns, offers a remedy to the limited classroom research, going on the talk about curriculum implementation at classroom level. There are various variables involved which are part of this theoretical framework. The three independent levels of this framework are as follows:

- Theoretical concepts: How groups of students make society and perceive language learning? What notions they carry towards language learning process? What are their cultural, religious and social perspectives of language learning? Before implementing the curriculum, teachers need to be clear about such theoretical concepts.
- Policy directives: It emphasizes on looking at categories of content. Teachers need to be sure that which content is related and how it can be taught in relation to other contents.
- Classroom behaviour: It revolves around two parameters: teacher talk and student talk. Student talk is more of a learner-centred teaching environment where students can speak with equal opportunity, and the teacher is not in the front, running the show.

Topic-199: Classroom Implementation

To sum up the discussion of Stern's notion of 'the wood and tree', we can say that the metaphor helps to see classroom implementation that how it goes into the mind of the student, and how the teacher makes the practice of the curriculum offered by the institutes. Before 1970, language teaching was method driven, and therefore it was also known as method era. But with the arrival of audiolingualism and cognitivism, it moved towards communicative language teaching and the shift occurred from language teaching to language learning. anguage teaching to

H.H. Stern (1983) looks at classroom as a dynamic entity where much more is going on than the expectation. He draws teachers' attention towards a very interesting and insightful aspect, which should be made an integral part of language curriculum design process. He projects that we as teachers often focus only on what actually takes place in the classroom, and tend to overlook the significance of broader issues that do take place outside the realms of the classroom.

On the ground of this issue, Stern projects a very metaphorical comparison that teacher as researcher has this inability that 'we fail to notice the wood for the trees'. According to Stern, we do see trees, but we do not distinguish between trees and wood. The problem is that we look at classroom discourse but we overlook the significance of broader issues that take place outside of the classroom.

Stern has made a very interesting point that audiolingualism and cognitivism have changed the direction from language teaching to language learning. In the paradigm shift from language teaching to learning, instead of looking at language learning from the perspective of a method, much more focus is being paid to the learning process.

Topic-197: Limitations of Classroom Research

The classroom research is limited in terms of looking at teacher at grass root level. In order to contextualize this discussion about the limitations of classroom research, Stern believes that it can be seen in the perspective of some of the changes and emphasis on language teaching analysis. For example, the method era paved the way for audiolingualism and cognitivism. This shifted the focus from language teaching to language learning.

The researcher believes that very few efforts have been made in the field of implementing curriculum at classroom level, and it is the teacher who can be trusted with responsibility to ensure this implementation. He believes that the findings of classroom research can be related to:

Question # 1 of 10 (Start time: 10:40:54 AM, 05 July 2024)

It is used to decide what level of the course a learner should enter.

Select the correct option

- ○ Online Tests
- ○ Home tutoring
- ○ Classroom evaluation
- ○ Placement assessment ✓

learner should enter

Topic-205: Placement Assessment

Placement assessment is used to decide what level of the course a learner should enter, what class the learner should join, and whether the learner should join the course at all. Placement assessment usually occurs under environment constraints. It often has to be done just before a course begi... Th... results have to be available quickly. The learners are largely unknown and may be confused ... course they wish to do. The learners may not perform their best on a placement test because ... unfamiliar with some of the test formats, because their knowledge of the language is "rusty" through lack of opportunity to use it, or because they are anxious about the test. The assessment may be the learners' first meeting with the teachers and course and could affect their attitudes to the course. The time available for assessment may be limited. The assessment needs to be reasonably accurate because it often proves difficult to move learners to other groups once they have joined a group. This means that placement assessment needs to be: (1) familiar, friendly and relaxed, (2) reasonably brief and easy to mark and interpret, and (3) focused on gathering the most relevant information.

144

This often means that placement tests focus on knowledge of language items rather than skill in

ENG519 - Curriculum Design (Quiz No.4)

Question # 3 of 10 (Start time: 10:42:35 AM, 05 July 2024)

A ------ is especially appealing to younger learners on short summer courses.

Select the correct option

- project
- website
- thesis
- course work

appealing to young

and continuous assessment. These tend to be less pressurized for most students and remove the problem of having a bad day at the time of the test, which results in an uncharacteristically poor performance.

A project in English is a great way for students to express their language skills and creativity at the same time. It is especially appealing to younger learners on short summer courses. By the end of the project, they have something to show for their efforts and the opportunity to use the English they've learnt, or picked up, on their own terms. Instead of filling in the gaps in a test the teacher has written, they choose their own topic and usually they find out what they need to know to achieve the task they set for themselves.

The problem is how to teach project work. You can agree on certain things your students have to include, for example, the history or background, the current situation and future plans of the chosen celebrity, sport or whatever subject they've chosen. This, at least, pushes the students to use a variety of tenses.

You can also use continuous assessment so that every week or so you record the students' performances and achievements. To make the best use of time, the school should organize shee can just tick or grade on each aspect assessed. Writing reports increases the teachers' administration work considerably. However, when you assess students in this way, it's easier to produce a final report at the end of the course rather than just a test score.

Topic-203: Guidelines for Monitoring and Assessment

Assessment is a major source of information for the evaluation of a course and thus its gradual improvement. Assessment also contributes significantly to the teacher's and learners' sense of achievement in a course and thus is important for motivation. It is often neglected in curriculum design and courses are less effective as a result. Curriculum design should include the planning of a well-thought-out programme of assessment of various kinds.

The aim of this part of the curriculum design process is to decide what to test and how to test it.

in gear

complaints. It doesn't really matter whether the student has taken a course before or whether she knows the grammar. You simply need to know how well she may be able to handle that job.

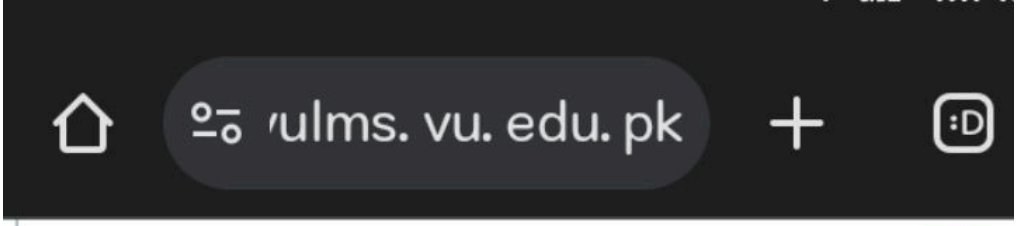

Topic-202: Testing to Establish the Best Course

Once your students are actually enrolled in a course you can continue to use tests to map their progress and measure what you've all achieved. If a course is of a specific length you can build in one or two progress tests at various stages. Progress tests serve a few purposes:

- Providing motivation for the students to study. Targets and deadlines help some people to get themselves in gear, but for others they can be stressful and de-motivating. You need to decide how to present your test so that you strike the right balance.
- Providing a standard level for the class so that students can be changed to a different course that better matches their proficiency level if necessary. Students sometimes ask to be moved up to a higher level and if you, as the teacher, aren't too keen, the results of the progress test may be the basis on which you decide. Likewise if you have to move a student down, you can use ' evidence for your decision.
- Highlighting gaps in your teaching – or the course materials – that you need to fill. This ca your own purposes or for the school to monitor its teachers. The danger of this is that you may end up training your class to pass the test rather than teaching them English.

142

The way you handle the test depends on the importance you attach to it and your main objective. For example, you may tell the students the topic of the test and ask them to revise particular points that you feel are essential to their progress in the rest of the course. On the other hand, you may decide that the class should have a thorough review, so you don't give the students specific details. This makes them revise everything so far. A fun and effective way to organize a progress test is to allow the students to design it themselves. Break them into different groups have each group construct a few questions, or ask each student to submit two or three questions each. As they review the topic and construct the questions, the topic becomes indelibly printed on their minds. There's also an exciting level of competition and anticipation as they wait to see who gets their question right.

Which of the following needs to be adjusted according to students' desire?

Select the correct option

- ○ Teaching strategy ✓
- ○ Curriculum design
- ○ Learning process
- ○ Social strategy

students' des

helps to see classroom implementation that how it goes into the mind of the student, and how the teacher makes the practice of the curriculum offered by the institutes. Before 1970, language teaching was method driven, and therefore it was also known as method era. But with the arrival of audiolingualism and cognitivism, it moved towards communicative language teaching and the shift occurred from language teaching to language learning. In this regard, there are three categories of classroom implementation:

- Teaching strategies: Although it originates from method debate, but it looks at concrete classroom activities. What strategies are being employed by teachers? There is need to adjust teaching strategy according to the students' desire.
- Timing strategies: It is under the direct control of the teacher. It happens within the premises of the classroom.
- Social or interpersonal strategies

the way you

up training your class to pass the test rather than teaching them English.

The way you handle the test depends on the importance you attach to it and your main objective. For example, you may tell the students the topic of the test and ask them to revise particular points that you feel are essential to their progress in the rest of the course. On the other hand, you may decide ' class should have a thorough review, so you don't give the students specific details. This ma' revise everything so far. A fun and effective way to organize a progress test is to allow the stu design it themselves. Break them into different groups have each group construct a few questions, or ask each student to submit two or three questions each. As they review the topic and construct the questions, the topic becomes indelibly printed on their minds. There's also an exciting level of competition and anticipation as they wait to see who gets their question right.

Topic-195: The Role of Teacher

A teacher has to play a vital role in terms of evaluating language learning tasks while implementing curriculum in the context of language classroom. Breen lists different roles of a teacher in which a language instructor has to look for these questions:

- To what extent was the task appropriate to learning objectives?
- To what extent was the content helpful?
- To what extent the chosen procedure proved to be appropriate?
- What knowledge was contributed to the task?
- What was familiar?
- What is discovered?
- What do we actually do while working on a task?
- What did we discover about each other's contributions during the task?
- What did we discover about the classroom and materials?

Topic-196: Seeing the Wood and the Trees: Thoughts on LT Analysis Introduction

H.H. Stern (1983) looks at classroom as a dynamic entity where much more is going on than the expectation. He draws teachers' attention towards a very interesting and insightful aspect, which should be made an integral part of language curriculum design process. He projects that we as teachers often focus only on what actually takes place in the classroom, and tend to overlook the significance of broader issues that do take place outside the realms of the classroom.

Question # 10 of 10 (Start time: 10:56:35 AM, 05 July 2024)

Before 1970, language teaching was _____driven.

Select the correct option

- Process
- Grammar
- Vocabulary
- Method

Click t

before 1970

- Classroom behaviour: It revolves around two parameters: teacher talk and student talk. Student talk is more of a learner-centred teaching environment where students can speak with equal opportunity, and the teacher is not in the front, running the show.

Topic-199: Classroom Implementation

To sum up the discussion of Stern's notion of 'the wood and tree', we can say that the metaphor helps to see classroom implementation that how it goes into the mind of the student, and how the teacher makes the practice of the curriculum offered by the institutes. Before 1970, language teaching was method driven, and therefore it was also known as method era. But with the arrival of audiolingualism and cognitivism, it moved towards communicative language teaching and the shift occurred from language teaching to language learning. In this regard, there are three categories of classroom implementation:

- Teaching strategies: Although it originates from method debate, but it looks at concrete c activities. What strategies are being employed by teachers? There is need to adjust strategy according to the students' desire.
- Timing strategies: It is under the direct control of the teacher. It happens within the premises of the classroom.
- Social or interpersonal strategies

form a particular tas

long and intimidating. Tests like these should have an easy marking system, usually an answer key, to cut down on administration.

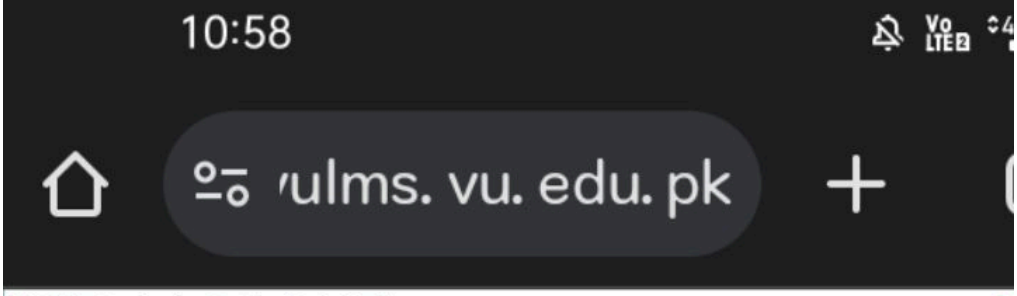

Proficiency tests aren't the same as the proficiency level in English, which follows advanced level. A proficiency test assesses a student's ability to perform a particular task or tasks that she'll have to accomplish in the future. So if your student tells you that she's been offered a great job in a restaurant on the condition that her English is up to scratch, you can design a test that covers taking orders and handing complaints. It doesn't really matter whether the student has taken a course before or whether she knows the grammar. You simply need to know how well she may be able to handle that job.

Topic-202: Testing to Establish the Best Course

Once your students are actually enrolled in a course you can continue to use tests to map their progress and measure what you've all achieved. If a course is of a specific length you can build in one or two progress tests at various stages. Progress tests serve a few purposes:

- Providing motivation for the students to study. Targets and deadlines help some pe themselves in gear, but for others they can be stressful and de-motivating. You need to de to present your test so that you strike the right balance.
- Providing a standard level for the class so that students can be changed to a different course that better matches their proficiency level if necessary. Students sometimes ask to be moved up to a higher level and if you, as the teacher, aren't too keen, the results of the progress test may be the basis on which you decide. Likewise if you have to move a student down, you can use the test as evidence for your decision.
- Highlighting gaps in your teaching – or the course materials – that you need to fill. This can be for your own purposes or for the school to monitor its teachers. The danger of this is that you may end up training your class to pass the test rather than teaching them English.

The way you handle the test depends on the importance you attach to it and your main objective. For example, you may tell the students the topic of the test and ask them to revise particular points that

Test can be made _____ by using pictures of different situations.

Select the correct option

- ○ Optical
- ○ Colorful
- ○ Entertaining
- ○ Visual ✓

by using pic

according to the student needs. So you start off by checking what s/he knows and what s/he needs. One kind of test that's really useful for giving you a head start before you even meet the student is a self-assessment test in which you get the student to analyze how good she is at various aspects of the language, usually by rating herself from 1-5 or by completing sentences.

You can make the test visual by using pictures of different situations in which they may use English (listening to lectures, using the phone and so on) and ask students how comfortable they are in those situations. Rating systems with smiley faces and frowning faces help to convey the point. Set the test out so that it goes from really easy to gradually more difficult and the students can stop when the questions get too tough.

Topic-201: Characteristics of Tests

Some establishments offer each student an interview with a teacher, which is basically a test. It's really time-consuming to do this but at least you can get a real view of the student's speaking ability which is the key language skill for most people. Of course listening is involved too as you int the students. You can also take the opportunity to plug the school's facilities and put the stuc ease because the test happens more informally. For example, to try a past simple check question, you casually ask: 'How did you get here today? Did it take long?'

For an interview to be really effective, let everyone in the room introduce themselves. You may have a second teacher who doesn't speak and just assesses, although this makes students more nervous. Explain what's going to happen, personalize the questions if possible and give each student some feedback at the end.

Written placement tests are very common too. They allow a school to test a whole coach load of new students all at the same time. At the end you also have a written record to keep in students' files.

One of the disadvantages of written tests compared with oral ones is that students complain about the results of written tests far more and often ask for another go. In written tests, students tend to cheat a lot and have warped results because of the pressure of the situation. It's fairly rare that someone in the
