ENG519 Final Term Current Questions

1. What are the characteristics of hidden curriculum?

The characteristics of hidden curriculum include implicit values, beliefs, and behaviors that are taught through the structure and culture of the school, but are not explicitly included in the formal curriculum. This can include things like social norms, attitudes, and expectations that students are exposed to through school experiences.

2. What are the different types of groups?

The different types of groups can include formal groups, which are created by an organization to accomplish a specific task; informal groups, which emerge naturally in a social setting; primary groups, which are based on close relationships and are important for personal identity and emotional support; and secondary groups, which are based on shared interests or goals.

3. Can you explain the metaphor being used?

A metaphor being used typically involves comparing two unlike things to highlight a particular characteristic or make a point. Metaphors are often used in literature and language to evoke imagery and create a deeper understanding of concepts or ideas.

4. What features are included in Tyler's model?

Tyler's model of curriculum development includes four basic steps: setting objectives, selecting content, organizing content, and evaluating the results. These features help guide educators through the process of designing a curriculum.

5. What are the three types of changes that can be made to maintain speaker interest during a presentation?

The three types of changes that can be made to maintain speaker interest during a presentation are physical changes (such as moving around the room), vocal changes (such as varying tone and pitch), and visual changes (such as using props or visual aids).

6. What are the two types of approaches in classroom research?

The two types of approaches in classroom research are quantitative research, which involves

the collection and analysis of numerical data, and qualitative research, which involves in-depth exploration of attitudes, behaviors, and experiences through methods like interviews or observations.

7. What are the three types of groups in Karr's model?

Karr's model of groups includes formal groups, informal groups, and reference groups. Formal groups are created by an organization for specific purposes, informal groups emerge naturally in social settings, and reference groups serve as a basis for comparison or identification.

8. How do you interpret the metaphor "seeing woods and trees" in classroom implementation?

The metaphor "seeing woods and trees" in classroom implementation suggests the importance of both seeing the big picture (the woods) and paying attention to the details (the trees) in order to effectively implement curriculum and instruction.

9. What features are included in Tyler's model?

Features included in Tyler's model of curriculum development include setting objectives, selecting content, organizing content, and evaluating the results. These elements help educators to design and implement effective curriculum plans.

10. Can you name any instruments that can lead to reshaping the evaluation process?

Instruments that can lead to reshaping the evaluation process include surveys, questionnaires, interviews, observations, and performance assessments. These tools can provide valuable feedback on the effectiveness of a curriculum.

11. Who are the five personnel that can contribute to large-scale projects?

The five personnel that can contribute to large-scale projects are curriculum developers, instructional designers, subject-matter experts, teachers, and administrators. Each of these roles plays a crucial part in the development and implementation of educational initiatives.

12. What are the two strategies of materials?

The two strategies of materials in a classroom setting include selecting appropriate materials that align with curriculum objectives and student needs, and adapting or creating materials to meet specific educational goals.

13. In what three ways can the use of materials be monitored in classrooms?

The use of materials in classrooms can be monitored through observations of student engagement, assessments of student learning outcomes, and feedback from students and teachers on the effectiveness of the materials used.

14. How can you choose options for reading skills such as scanning?

Options for reading skills such as scanning can be chosen based on the specific needs of the learners, the learning objectives, and the content being studied. Teachers may use a variety of strategies and resources to develop students' scanning skills.

15. What is the learner model?

The learner model refers to an understanding of the characteristics, needs, and abilities of learners in a particular educational setting. This model helps educators design effective learning experiences that meet the needs of their students.

16. What questions should a teacher consider when learning curriculum development?

When learning curriculum development, a teacher should consider questions such as: What are the learning goals? What resources are available? What teaching methods are most appropriate? How will student progress be assessed? These questions help guide the development of a curriculum that meets the needs of learners.

17. What is the difference between experiential training and awareness training?

Experiential training involves hands-on learning experiences that allow participants to acquire new skills through practice and reflection. Awareness training focuses on building understanding and insight into specific topics or issues through discussion, reflection, and exposure to new ideas.

18. How can materials be monitored in classrooms?

Materials can be monitored in classrooms through regular observation of student engagement and understanding, feedback from students and teachers on the effectiveness of materials, and assessments of student learning outcomes.

19. Which character reflects the learner's model?

The learner's model reflects characteristics, needs, and abilities of learners in a particular educational setting. This includes factors such as learning styles, prior knowledge, interests, and motivations that influence how students engage with the curriculum.

20. What are the different teaching methods used in the classroom?

Different teaching methods used in the classroom can include lecture-based instruction, group work, experiential learning, hands-on activities, technology-enhanced instruction, and inquiry-based learning. Teachers can choose the most appropriate methods based on the learning objectives, student needs, and preferences.

21. What are two disadvantages of written tests?

Two disadvantages of written tests include:

- Limited assessment of practical skills: Written tests may not accurately assess a student's ability to apply knowledge in real-world situations or perform tasks that require practical skills.

- Risk of cheating: Written tests can be more easily compromised by cheating, such as by copying from another student or accessing unauthorized materials.

22. Why is the implementation of change in curriculum not successful?

The implementation of change in curriculum may not be successful due to factors such as resistance from stakeholders (teachers, administrators, parents), lack of resources or training for teachers to effectively implement the changes, insufficient communication and collaboration between those involved in the curriculum design and implementation process, and conflicting priorities or goals among different stakeholders.

23. What are the three dimensions of a language program?

The three dimensions of a language program typically include:

- Linguistic dimension: Focuses on language structures, vocabulary, grammar, and pronunciation.

- Sociolinguistic dimension: Addresses the social and cultural aspects of language use, including topics such as conventions of language use, discourse markers, and communication norms.

- Pragmatic dimension: Deals with the functional aspects of language, such as how language is used for different purposes, in different contexts, and with different audiences.

24. How do you differentiate between Central and Backward Curriculum Design?
Central Curriculum Design involves a standardized curriculum developed at a national or state level, which is implemented consistently across all schools. Conversely, Backward Curriculum Design starts with identifying desired learning outcomes and goals, and then designing curriculum and instructional strategies to achieve those goals, often focusing on student-centered and outcome-based approaches.

25. What are two characteristics of hidden curriculum?
Two characteristics of hidden curriculum include:

- Unintentional transmission of values, beliefs, and norms through the educational system.

- Implicit messages conveyed through the structure, organization, and content of the curriculum.

26. Can you explain Kerr's model?

Kerr's model is a curriculum development model that emphasizes the importance of aligning curriculum, instruction, and assessment to ensure effective teaching and learning. It involves the systematic planning and implementation of educational programs to achieve specific learning objectives and outcomes.

27. What are three strategies used for interactive language teaching through the internet?

Three strategies used for interactive language teaching through the internet include:

- Online discussions and forums for students to communicate with each other and the teacher.

- Virtual language labs and multimedia resources for interactive learning activities.

- Collaborative projects and group assignments that require students to work together online.

28. What are the approaches used for language program evaluation?

Approaches used for language program evaluation may include:

- Formative evaluation: Ongoing assessment and feedback to improve the curriculum and teaching practices.

- Summative evaluation: End-of-program or end-of-course assessment to determine the overall effectiveness of the language program.

- Stakeholder feedback: Gathering input from students, teachers, parents, and administrators to assess the impact and relevance of the language program.

29. Can you explain the National Language Curriculum?

The National Language Curriculum is a framework that outlines the objectives, content, and assessment criteria for language learning at the national level. It provides guidelines for what students should achieve in terms of language proficiency and communication skills, and serves as a basis for designing and implementing language programs in schools.

30. What is subject-centered teaching?

Subject-centered teaching is an approach where the curriculum and instruction are organized around specific subjects or disciplines, with a focus on content knowledge and academic skills. It is teacher-directed and emphasizes the mastery of subject matter through direct instruction and assessments.

31. What strategies can teachers use for curriculum management?

Strategies teachers can use for curriculum management include:

- Effective planning and organization of curriculum resources and materials.

- Regular assessment and feedback to monitor student progress and adjust instructional strategies as needed.

- Collaboration with colleagues, administrators, and other stakeholders to align curriculum goals and ensure coherence across grade levels and subjects.

32. What is summative evaluation?

Summative evaluation is an assessment method used to determine the overall achievement or performance of students at the end of a unit, course, program, or academic year. It typically involves final exams, project assessments, or standardized tests that measure learning outcomes and provide a basis for grading and certification.

33. How do concrete situational and mythical situational syllabus differ?

Concrete situational syllabus focuses on language use in specific real-life contexts and situations, while mythical situational syllabus employs imaginary or fictitious scenarios for language teaching and learning. The former prioritizes practical language skills and real-world communication, while the latter may be more creative and imaginative in its approach.

34. What decisions need to be made before designing materials?

Decisions that need to be made before designing materials include:

- Identifying learning objectives and outcomes to guide content selection and organization.

- Considering the target audience and their needs, interests, and backgrounds.

- Choosing appropriate materials, resources, and instructional approaches based on the curriculum goals and constraints.

35. What are the components of the inner circle curriculum?

The components of the inner circle curriculum refer to the core subjects or disciplines that are considered essential for students' academic and intellectual development. These may include language arts, mathematics, science, social studies, and other foundational courses that provide a well-rounded education.

36. Can you explain Graves' definition of accountability-oriented evaluation?

Graves' definition of accountability-oriented evaluation focuses on assessing the effectiveness and impact of educational programs in terms of meeting specific learning objectives, standards, and performance expectations. It emphasizes accountability for student

achievement and outcomes, often using data-driven measures to evaluate the success of curriculum and instruction.

37. According to Hege, what is the hidden curriculum?

Hege defines hidden curriculum as the unintended lessons, values, and perspectives that students learn in school through the socialization process, rather than through formal instruction.

38. What are the three key issues affecting students' performance in language learning?

Motivation: Student interest and motivation significantly impact language learning.

Instructional Methods: Effective teaching methods and strategies play a crucial role.

Language Anxiety: Students' fear or discomfort in using or learning a new language can hinder performance.

39. What is affective material?

Affective materials refer to resources, activities, or strategies designed to address learners' emotions, attitudes, and motivation in language learning.

40. What are the five factors of performance objectives as stated by Brown?

Performance: Clearly define what learners are expected to do.

Condition: Specify the circumstances under which the performance will occur.

Criteria: Establish the standards or measures used to judge success.

Audience: Identify who will perform the task.

Behavior: Describe the observable actions or behaviors learners will exhibit.

41. In what ways can the World Wide Web increase language learning potential?

Access to Authentic Materials: Learners can access authentic language materials (videos, articles, etc.) from around the world.

Communicative Opportunities: Platforms enable communication with native speakers and other learners globally.

Interactive Learning Tools: Various tools and applications enhance language practice and skill development.
