ENG529_Finals_Solved_Spring2024

Objective

1. Positive effect of technology depends on its _____. (usage)
2. Technology-enhanced teaching environment is _____ for learners. (effective)
3. When technology is used learners can learn _____. (meaningfully)
4. By using computer technology, language class become an _____ place. (active)
5. Learning with the help of technology helps to develop _____. (emotions)
6. Cooperation is one of the most important _____ for learning. (tool)
7. Learners must use technology as a _____ part of their learning process. (significant)
8. The usage of technology can create a learning centered around a ____ (learner)
9. The combination of multimedia and technology attracts students' _____. (attention)
10. The application of technology provides _____ ways for teaching methods. (alternative)
11. The use of computer technology expands _____ for learning. (opportunities)
12. The use of film in teaching helps to _____ the topic. (realize)
13. Learners' _____ can be enhanced through technology. (cooperation)
14. Technology is a/an _____ tool for learners. (effective)
15. The use of internet increases learners' ____. (motivation)
16. Steinkuehler and Williams consider Virtual Worlds as _____. (new third space)
17. Which of the following is a kind of knowledge which we learn from other people, either by direct instruction or by watching them. (culture)
18. Online 3D environment may simulate the _____ world. (real)
19. One of the first widely available VWs with a significant education component was _____. (active worlds)

20. In 1978, Roy Trubshaw created a new game that was patterned on one of the variations of Zork that he called _____. (MUD)

21. In technology education, there should be a sustained _____ made between task design and implementation. (comparison)

22. Virtual worlds are primarily _____ spaces for the purpose of humans interaction. (social)

23. Some researchers also discuss the power of VWs to expose learners to the real world via the _____ environment. (virtual)

24. In the early days of VW development, the choices were quite _____. (limited)

25. The first virtual text-based environment was based on the real-life Mammoth Cave system in _____. (Kentucky)

26. Active worlds (AWs) were created in _____. (1995)

27. Determine how many individuals are making use of VWs is also quite . (difficult)

Maha Malik

ENG529_Finals_Solved_Spring2024

Subjective

Q. Self-assessment of e-learning (5 marks)

Self-assessment means the process of having the learners critically reflect upon, record the progress of and perhaps suggest grades for, their learning. The term peer-assessment refers to the process of having the learners critically reflect upon, and perhaps suggest grades for, the learning of their peers.

Reasons for Using Self- and Peer-assessment

- Encourage reflection
- Help lecturers focus their feedback (e.g. not telling students what they are already aware of)
- An important skill in itself – helping students become more autonomous learners

Q. Define LMS & 5 benefits (5 marks)/ LMS and it's 3 benefits

Definition

A Learning Management System (LMS) is a software application or web-based technology used to plan, implement, and assess a specific learning process. It provides an infrastructure for the administration, documentation, tracking, reporting, and delivery of educational courses or training programs. LMSs can also be referred to as content management systems (CMSs) or virtual learning environments (VLEs).

Benefits of LMS

- Centralized Learning Platform: An LMS synchronizes all academic and administrative activities on a single platform, facilitating easy access and management of educational resources.
- Enhanced Communication Tools: Modern LMSs, such as Moodle and Blackboard, offer a variety of communication tools (both asynchronous and

synchronous), which enhance interaction and engagement between students and instructors.

- Video Integration: LMS platforms allow users to record and incorporate videos directly into the system, which can be used for posts, discussion forums, and assignments. This feature enhances the learning experience by incorporating multimedia elements.
- Improved Speaking Opportunities: Through asynchronous video postings, students can record and improve their video responses. This process helps students achieve better accuracy and complexity in their language use, as they have more time to plan and refine their responses.
- Task Design Flexibility: LMSs provide flexibility in designing educational activities. Instructors can carefully plan tasks that focus on developing various language skills, including accuracy, complexity, and fluency, thus tailoring the learning experience to meet specific learning objectives.

In summary, LMSs offer a centralized and flexible platform that enhances communication, integrates multimedia elements, improves language learning opportunities, and provides a robust framework for managing educational processes.

Q. three other names of cognitive assignment

In the context of technology in language teaching, cognitive assignments are often referred to as cognitive tasks, learning tasks, or educational activities. These tasks are designed to engage students' cognitive processes, such as problem-solving, critical thinking, and understanding complex concepts. By using technology, these assignments can be made more interactive and engaging, allowing students to explore language learning through simulations, games, and other digital tools that promote active learning and deep understanding.

Q. five levels of virtual worlds/ VWs begin with details in five key areas

- Age level: The specific age ranges recommended for the VW based on the information provided by the company. This may be in grade levels or age.
- Game level (low, mid, or high): A “pure” social environment would rarely be strongly game-like in nature. A MMORPG like World of Warcraft, on the other hand, may include social elements, but the primary goal of WoW is to gain talents, skills, and tools in order

- Socialization level (low, mid, or high): VWs are social spaces, but some are more social than others.
- Education focus (low, mid, or high): Nearly all VWs have potential use for education. The key is in the way that they are used. VWs are a tool for teachers in the same way that PowerPoint can be a tool.
- Technical requirements (low, mid, or high): Some VWs are more graphics-intensive than others. Some require more brandwidth, or are more difficult to navigate.

Q. interactive whiteboard enhance students engagement and learning outcome write 5 benefits

Interactive whiteboards allow educators to take standard lessons and turn them into interactive activities. Students have a lot of fun while they learn. Interactive whiteboards allow students to interact with the learning material. They become a part of the lesson and can even teach each other. Their understanding of the subject is seen through touching, drawing, or writing on the board. Educational games can be played by entire classrooms. They also provide immediate feedback, so students and teachers can easily assess the student progress. Interactive whiteboards are clean and require very low maintenance. No chalk or markers or other writing utensils needed. Data is modified using a specialized pen for highlighting, drawing, and writing. Therefore there is no mess. No cleanup. It's just that easy. Various media types can be displayed on an interactive whiteboard. Whether photos, graphs, maps, illustrations, or videos, teachers have an abundance of options. They can create creative lessons to inspire their students. Students are more attentive in the classroom; their comprehension improves; test scores rise, and literacy increases. Students learn better and remember it. When students are engaged more in the classroom, learning always increases.

Q. 3 benefits of e-assessments

- Immediate feedback, tailored to help students improve their knowledge and performance
- Access for students in different geographical locations and at different times
- Sophisticated reporting, allowing you to refine the exercise or identify areas in which more instruction is needed

- Students undertake online tests many times to assess and re-assess their knowledge

Q. write 2 names of web course management systems that are for higher education

- learning management system (LMS)
- virtual learning environment (VLE).

Q. Five considerations before adopting blended approach!

- Teacher Training
- Choosing an Appropriate Blend
- Costs
- Attrition and Motivation
- Peer Support

Q. CCA program

Colossal Cave Adventure

This virtual text-based environment was based on the real-life Mammoth Cave system in Kentucky but included several fantasy-inspired components.

Q. PLATO

PLATO exercises were largely text-based and focused on one particular skill, with assessment through multiple-choice or short answer format questions. The interactions focused on grammar and vocabulary development, although PLATO did have capabilities to display graphics (through a pneumatic tool to access a microfiche) and play audio (on mounted disks). The monitors used were surprisingly sophisticated, as they were touch-sensitive, thereby allowing the creation of exercises such as touching the screen to identify a designated vocabulary item in a picture or playing a concentration-style matching game.

Q. Affordance

In the context of language teaching, affordance refers to the potential actions and benefits that a particular technology or tool offers to learners. For example, an interactive whiteboard affords opportunities for dynamic and interactive

presentations, while a language learning app may afford personalized practice and instant feedback. Understanding affordances helps educators select the most appropriate technologies to enhance learning outcomes and engagement.

Q. E- books two libraries names

- Project Gutenberg provides free access to a vast collection of e-books, including classic literature and language resources.
- Google Books offers a comprehensive digital library where users can search, preview, and read books across various subjects, including language learning materials.

Q. e-assessment three forms

- online tests, quizzes, and exams
- e-submission and e-marking
- self- and peer-assessment
- student response systems

Q. SLA in CALL

Second Language Acquisition (SLA) in the context of Computer-Assisted Language Learning (CALL) refers to the process by which learners acquire a second language through the use of technological tools and resources. CALL programs utilize various technologies, such as multimedia software, online platforms, and mobile apps, to provide interactive and immersive learning experiences. These technologies support SLA by offering personalized feedback, extensive practice opportunities, and access to authentic language materials, thereby enhancing the overall effectiveness of language learning.

Q. CAPT five benefits

- Increased Practice Time: CAPT software allows students to practice pronunciation extensively without the limitations of class time, providing ample opportunities to improve their skills.
- Risk-Free Environment: Students can practice in a non-human, non-judgmental setting, which reduces anxiety and encourages experimentation without fear of making mistakes or facing penalties.

- Patience and Flexibility: Unlike human instructors, CAPT programs are infinitely patient and can accommodate the individual pace of each learner, allowing for a more personalized learning experience.
- Diverse Speech Sounds Exposure: CAPT software can include diverse speech sounds from different speakers and registers, helping students to become familiar with a wide range of accents and intonations.
- Clear Feedback on Intonation: CAPT tools, such as PRAAT acoustic analysis software, provide students with clear, visual feedback on their intonation and pronunciation, helping them understand and correct their speech patterns effectively.

Q. Blended Learning

If appropriately conceived, developed and delivered — can support any number of learners, anywhere and anytime; it can help managers use human and other resources in the most efficient way possible to give learners the best learning experience possible. It is satisfying to know that there is a growing body of evidence to support the view that blended learning can result in a better student learning experience, an improvement in learning outcomes, and greater student motivation, confidence and satisfaction, leading to learners becoming more independent learners and enjoying learning the language.

Q. Blended Approach

A blended approach represents a significant departure from a traditional approach. It represents a fundamental reconceptualization and reorganization of the teaching and learning dynamic. In this respect, no two blended learning designs are identical.
