Q.1 In 8051, there is an _____ stack.

A. decrementing

B. incrementing

C. stagnant

D. semi-automatic

Q.2 A symbol associated to an instruction in the program is known as:

A. Operand

B. Constant

C. Definition

D. Label

Q.3 When the control is transferred to a subroutine?

A. After the arguments are popped out from the stack

B. When the return address is recovered

C. After the arguments are pushed on the stack

D. When the instruction pointer is not available

Q.4 The operand of _____ is called the source operand because the data moves to the stack from the operand.

A. CALL

B. POP

C. RET

D. PUSH

Q.5 In _____, a zero is inserted from the right and every bit moves one position to its left with the most significant bit dropped into the carry flag.

A. SAR

B. SAL

C. SHL

D. both SHL and SAL

Q.6 Program consists of _____ logical parts.

A. One

B. Two

C. Four

D. Three

Q.7 In far jump, _____.

A. both offset and segment are given

B. only offset is given

C. no need to mention any segment or offset

D. only segment address is given

Q.8 Conditional jump can only be _____.

A. near

B. long

C. short

D. far

Q.9 A decrementing stack moves from _____ to _____ addresses as elements are added in it.

A. negative, positive

B. positive, negative

C. higher, lower

D. lower, higher

Q.10 Which of the following registers hold the address of data in Intel 8088?

A. BX, SP, SI and DI

B. BX, BP, SI and ES

C. BX, BP, ES and DI

D. BX, BP, SI and DI

VU TOOLKIT
