Q.1 ---------- state is not important in Melay machine.

A. Combination of

B. Initial

C. Final

D. Empty

Q.2 Two machines are said to be equivalent if they print the ____ output string when the ____input string is run on them.

A. different, same

B. unique, different

C. same, different

D. same, same

Q.3 In which of the following machine, the length of output string is 1 more than that of input string?

A. Non-deterministic finite automaton

B. Moore machine

C. Finite automaton with output

D. Mealy machine

Q.4 In Mealy machine the output depends on _____

A. Present state and Present input

B. Type of input

C. Only present state

D. Nothing

Q.5 Melay machine to increase the output string in magnitude by 1 is called:

A. Decrementing machine

B. Converting machine

C. Complementing machine

D. Incrementing machine

Q.6 If we have an NFA having 3 states, and we convert that NFA to an FA. The resultant FA will contains _____ states.

A. 2

B. 3

C. 5

D. 4

Q.7 In NFA having multiple transitions at certain state, FA can be built by introducing:

A. Empty state

B. Combination of states

C. Final state

D. Initial state

Q.8 Consider we have languages L7 and L6. Which of the following represents their concatenation?

A. L6*L7

B. L7+L6

C. L7L6

D. L7/L6

Q.9 The complement of a regular language is also _____.

A. irregular

B. regular

C. irregular but finite

D. irregular but infinite

Q.10 FA corresponding to an NFA can be built by introducing a state corresponding to the combination of states, for a letter having

A. none of the given options

B. no transition at certain state

C. more than one transitions at certain state

D. one transition at certain state
