Q.1 In data flow diagram which of the following operator is used, when data flows from a source process to one of the mentioned sinks?

A. Separator

B. Collector

C. Ring sum operator

D. And operator

Q.2 In Database development process, which phase involves designing of any new application for the enhancement of the system?

A. Implementation phase

B. Analysis phase

C. Testing phase

D. Maintenance phase

Q.3 Which of the following clarify the semantics of a relationship?

A. Roles

B. Entity

C. Relationship set

D. Participants

Q.4 In three level architecture of the database, which level is helpful to display data which is not actually placed in the database?

A. Physical level

B. Internal level

C. Conceptual level

D. External level

Q.5 If we make changes in the extension of database, it will affect _____.

A. Multiple fields

B. Multiple records

C. A single record

D. All stored records

Q.6 Data inconsistency leads to a number of problems such as _____.

A. loss of information and incorrect results

B. Slow database development

C. less secure data

D. Data isolation

Q.7 In database development process, proper study of the system is called_____.

A. System analysis

B. Requirement analysis

C. Real word scenario study

D. Preliminary Study

Q.8 Consider an example XYZ university might need to record which teachers taught which subject in which courses. It is an example of ---------- relationship.

A. Unary

B. Ternary

C. N-ary

D. Binary

Q.9 In the database system _____ provides many features to ensure the data integrity.

A. Operating system

B. Anti various software

C. System software

D. Database management system

Q.10 Every primary key (PK) will be a candidate key and every candidate key will be a _____.

A. Primary key

B. Foreign key

C. Super key

D. Alternate key

VU TOOLKIT
