Q.1 The database system deals with large amount of data, this property is called _____.

A. Concurrency

B. Scalability

C. Database design

D. Robustness

Q.2 A candidate key that does not have a null value and is selected to uniquely identify all other attribute values in any given row is called a ___.

A. Alternate key

B. superkey

C. primary key

D. secondary key

Q.3 Which model operates at the lowest level of abstraction?

A. conceptual

B. internal

C. external

D. physical

Q.4 _____ is the first computer-based approach for handling the commercial or business applications.

A. Database system

B. Scientific systems

C. Record base system

D. File processing system

Q.5 Consider the key "CNIC, Name" and choose the best option that describes the key most effectively.

A. The given key is not a super key but a candidate key.

B. The given key is a super key and candidate key as well.

C. The given key is a super key and alternate key.

D. The given key is a super key but not a candidate key.

Q.6 The entity that is NOT dependent on any other entity for its existence is known as _____ entity.

A. Strong

B. Dependent

C. Weak

D. Derived

Q.7 Data inconsistency leads to a number of problems such as _____.

A. Slow database development

B. Data isolation

C. loss of information and incorrect results

D. less secure data

Q.8 In which phase of database development process, logical design of the database is created?

A. Physical design

B. Implementation

C. Design phase

D. Requirement analysis

Q.9 When data stored onto a magnetic media, it is stored in_____.

A. Binary format

B. Text format

C. Encrypted form

D. Numeric from

Q.10 A relationship is an association between two entities, or between an entity and itself. The diamond symbol for a relationship is ..... if one of the participants is dependent on the other.

A. Doubled

B. Filled

C. Single

D. Dotted
